

# Mark Scheme (Results)

Summer 2021

Pearson Edexcel International Advanced  
Subsidiary Level  
In Chemistry (WCH12)  
Paper 01: Energetics, Group Chemistry,  
Halogenoalkanes and Alcohols

## Section A

Question Number	Answer	Mark
1	 <p>The only correct answer is A ( )</p> <p><i>B is incorrect because the labels are incorrect</i></p> <p><i>C is incorrect because the labels are incorrect and this is for an endothermic reaction</i></p> <p><i>D is incorrect because the labels are incorrect and is for an endothermic reaction</i></p>	1

Question Number	Answer	Mark
2	<p>The only correct answer is D (<math>\Delta_r H</math>)</p> <p><i>A is incorrect because this is not an enthalpy of atomisation</i></p> <p><i>B is incorrect because carbon monoxide is not the final combustion product of carbon</i></p> <p><i>C is incorrect because two moles of carbon monoxide are formed</i></p>	1

Question Number	Answer	Mark
<b>3</b>	<p><b>The only correct answer is A</b> (0.01)</p> <p><i>B is incorrect because this is the average rate of reaction over 15 seconds</i></p> <p><i>C is incorrect because this is the average rate of reaction up to 8 seconds</i></p> <p><i>D is incorrect because this is the concentration reading at 8 seconds</i></p>	<b>1</b>

Question Number	Answer	Mark
<b>4</b>	<p><b>The only correct answer is C</b> (Y and W)</p> <p><i>A is incorrect because the curve is for a lower temperature</i></p> <p><i>B is incorrect because the curve is for a lower temperature and the <math>E_a</math> has increased</i></p> <p><i>D is incorrect because the <math>E_a</math> has increased</i></p>	<b>1</b>

Question Number	Answer	Mark
<b>5</b>	<p><b>The only correct answer is D</b> (+6)</p> <p><i>A is incorrect because this does not consider the numbers of oxygen and sodium atoms in the compound</i></p> <p><i>B is incorrect because this is the number of chromium atoms in the compound</i></p> <p><i>C is incorrect because this does not consider the oxidation numbers of sodium and oxygen</i></p>	<b>1</b>

Question Number	Answer	Mark
<b>6</b>	<p><b>The only correct answer is C</b> (N<sub>2</sub>O<sub>4</sub>)</p> <p><i>A is incorrect because the oxidation number of nitrogen is +1</i></p> <p><i>B is incorrect because the oxidation number of nitrogen averages +3</i></p> <p><i>D is incorrect because the oxidation number of nitrogen is +5</i></p>	<b>1</b>

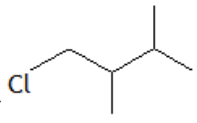

Question Number	Answer	Mark
<b>7</b>	<p><b>The only correct answer is D</b> (Hydrogen unchanged, Oxygen oxidised and reduced)</p> <p><i>A is incorrect because hydrogen is unchanged and oxygen is both oxidised and reduced</i></p> <p><i>B is incorrect because hydrogen is unchanged and oxygen is both oxidised and reduced</i></p> <p><i>C is incorrect because hydrogen is unchanged and oxygen is both oxidised and reduced</i></p>	<b>1</b>

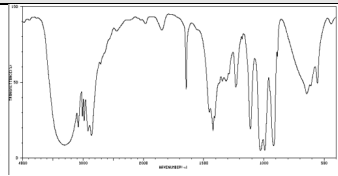

Question Number	Answer	Mark
<b>8</b>	<p><b>The only correct answer is B</b> (II and III)</p> <p><i>A is incorrect because number of protons increasing is not a reason for decreasing ionisation energy down the group</i></p> <p><i>C is incorrect because electrons being unpaired is not a reason for decreasing ionisation energy down the group</i></p> <p><i>D is incorrect because statements I and IV are not reasons for decreasing ionisation energy down the group</i></p>	<b>1</b>

Question Number	Answer	Mark
<b>9(a)</b>	<p><b>The only correct answer is A</b> (<math>\text{CH}_3\text{CHICH}_3</math>)</p> <p><i>B is incorrect because the rate of reaction increases as the carbon-halogen bond strength decreases</i></p> <p><i>C is incorrect because the rate of reaction increases as the carbon-halogen bond strength decreases</i></p> <p><i>D is incorrect because the rate of reaction increases as the carbon-halogen bond strength decreases</i></p>	<b>1</b>

Question Number	Answer	Mark
<b>9(b)</b>	<p><b>The only correct answer is B</b> (<math>\text{CH}_3\text{CH}_2\text{CBr}(\text{CH}_3)\text{CH}_3</math>)</p> <p><i>A is incorrect because secondary halogenoalkanes take longer to hydrolyse than tertiary</i></p> <p><i>C is incorrect because primary halogenoalkanes take longer to hydrolyse than tertiary</i></p> <p><i>D is incorrect because primary halogenoalkanes take longer to hydrolyse than tertiary</i></p>	<b>1</b>

Question Number	Answer	Mark
10	<div style="text-align: center;"> <math display="block">  \begin{array}{c}  \text{Br} \quad \text{Cl} \\    \quad   \\  \text{H}_3\text{C}-\text{C}-\text{C}-\text{H} \\    \quad   \\  \text{CH}_3 \quad \text{CH}_3  \end{array}  </math> </div> <p><b>The only correct answer is A (</b></p> <p><i><b>B</b> is incorrect because the bromine and chlorine are on the wrong carbon atoms</i></p> <p><i><b>C</b> is incorrect because there is an additional methyl group</i></p> <p><i><b>D</b> is incorrect because the chlorine and the bromine are on the same carbon atom</i></p>	1

Question Number	Answer	Mark
11	<div style="text-align: center;">  </div> <p><b>The only correct answer is C (</b></p> <p><i><b>A</b> is incorrect because this is a secondary haloalkane</i></p> <p><i><b>B</b> is incorrect because this is a tertiary haloalkane</i></p> <p><i><b>D</b> is incorrect because this is a secondary haloalkane</i></p>	1

Question Number	Answer	Mark
12	 <p><b>The only correct answer is C ( )</b></p> <p><i>A is incorrect because this shows no absorbance for the C=C stretch</i></p> <p><i>B is incorrect because this shows no absorbance for the O-H stretch or C=C stretch</i></p> <p><i>D is incorrect because this shows no absorbance for the O-H stretch</i></p>	1

Question Number	Answer	Mark
13	<p><b>The only correct answer is B (<math>\text{CH}_3\text{CO}^+</math>)</b></p> <p><i>A is incorrect because the fragment is not present in propanone</i></p> <p><i>C is incorrect because the fragment is not present in propanone</i></p> <p><i>D is incorrect because the fragment is not present in propanone</i></p>	1

Question Number	Answer	Mark
14	<p><b>The only correct answer is D (<math>136.9 \text{ cm}^3</math>)</b></p> <p><i>A is incorrect because this is the volume of acid required</i></p> <p><i>B is incorrect because this is the number of moles of acid multiplied by 1000</i></p> <p><i>C is incorrect because this is 150 – (the number of moles of acid multiplied by 1000)</i></p>	1

Question Number	Answer	Mark
<b>15(a)</b>	<p><b>The only correct answer is B (5)</b></p> <p><i>A is incorrect because this is the rounded number of grams of NaOH needed</i></p> <p><i>C is incorrect because this is the mass of a pellet divided by the moles of NaOH</i></p> <p><i>D is incorrect because this is the moles of NaOH multiplied by 1000 and divided by 0.7</i></p>	<b>1</b>

Question Number	Answer	Mark
<b>15(b)</b>	<p><b>The only correct answer is A (0.0031 mol)</b></p> <p><i>B is incorrect because this is the moles of sodium hydroxide</i></p> <p><i>C is incorrect because the number of moles of NaOH has been doubled instead of halved</i></p> <p><i>D is incorrect because this calculation has ignored the sample of 25.0 cm<sup>3</sup></i></p>	<b>1</b>

Question Number	Answer	Mark
<b>15(c)</b>	<p><b>The only correct answer is B (pink → colourless)</b></p> <p><i>A is incorrect because the indicator would start pink in sodium hydroxide</i></p> <p><i>C is incorrect because this is the opposite colour change for methyl orange indicator</i></p> <p><i>D is incorrect because this is the colour change for methyl orange indicator</i></p>	<b>1</b>

Question Number	Answer	Mark
<b>16</b>	<p><b>The only correct answer is C (AgCl and AgBr )</b></p> <p><i>A is incorrect because AgBr will be soluble but not AgI</i></p> <p><i>B is incorrect because AgCl will be soluble but not AgI</i></p> <p><i>D is incorrect because AgBr will also be soluble</i></p>	<b>1</b>

Question Number	Answer	Mark
<b>17</b>	<p><b>The only correct answer is C</b> (5.22 dm<sup>3</sup>)</p> <p><i>A is incorrect because this is the number of moles of hydrogen</i></p> <p><i>B is incorrect because this is the number of moles of lithium</i></p> <p><i>D is incorrect because this is the number of moles of lithium multiplied by the molar volume</i></p>	<b>1</b>

**Total for Section A = 20 marks**

## Section B

Question Number	Answer	Additional Guidance	Mark
<b>18(a)</b>	<ul style="list-style-type: none"> <li>identification of suitable reagent(s)</li> </ul>	<p>50% / concentrated  <b>and</b>  sulfuric acid / <math>\text{H}_2\text{SO}_4</math>  <b>and</b>  potassium bromide / KBr</p> <p>Allow  Other named bromides  Phosphorus <b>and</b> bromine  Phosphorus(V) bromide / <math>\text{PBr}_5</math>  Phosphorus(III) bromide / <math>\text{PBr}_3</math>  Thionyl bromide / <math>\text{SOBr}_2</math></p> <p>If the name and the formula are given, then both must be correct</p> <p>Do not award dilute sulfuric acid</p>	<b>1</b>

Question Number	Answer	Additional Guidance	Mark
<b>18(b)(i)</b>	<ul style="list-style-type: none"> <li>conditions</li> </ul>	<p>Ethanolic / alcoholic (solution)</p> <p>Allow ethanol / alcohol  Ignore heat / solid / reflux</p> <p>Do not award aqueous solution</p>	<b>1</b>

Question Number	Answer	Additional Guidance	Mark
<b>18(b)(ii)</b>	<ul style="list-style-type: none"> <li><math>\text{C}_4\text{H}_7\text{N}</math></li> </ul>	Allow elements in any order  Ignore $\text{C}_3\text{H}_7\text{CN}$	<b>1</b>

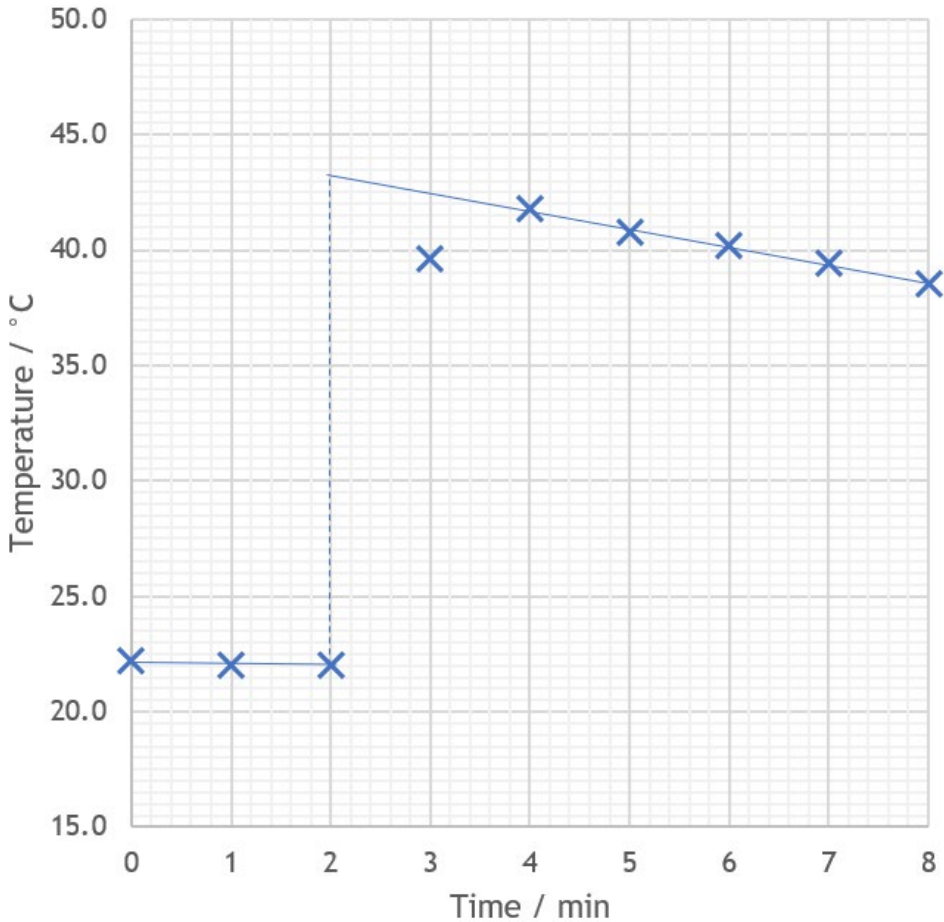

Question Number	Answer	Additional Guidance	Mark
<b>18(b)(iii)</b>	<ul style="list-style-type: none"> <li>nucleophilic</li> <li>substitution</li> </ul>	(1) (1)  Allow nucleophile for nucleophilic  Mark independently List principle applies (further incorrect answers will each lose a mark) Allow phonetic spelling	<b>2</b>

Question Number	Answer	Additional Guidance	Mark
18(b)(iv)	<ul style="list-style-type: none"> <li>dipole and arrow from C–Br bond to Br<sup>δ-</sup> or just beyond (1)</li> <li>arrow from ammonia to C<sup>δ+</sup> and 1 or 2 correct curly arrows on intermediate (each from bond or lone pair to atom) (1)</li> <li>intermediate with charge (1)</li> <li>ammonium / H<sup>+</sup> and bromide ion (1)</li> </ul> <p><b>OR</b></p> <p>HBr</p> <p><b>OR</b></p> <p>NH<sub>4</sub>Br</p>	<p>Accept bromide and H<sup>+</sup>/ammonium ions shown anywhere on answer (i.e. they don't have to be with intermediate and final product respectively)</p> <p>Allow 3<sup>rd</sup> arrow for M2 to be from bromide lone pair to the hydrogen atom</p> <p>Negative charge on ammonia should be penalised once only</p> <p>Accept correct SN2 mechanism for 4 marks</p>	4

**Total for Question 18 = 9 marks)**

Question Number	Answer	Additional Guidance	Mark
<b>19(a)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>correct balanced equation <b>(1)</b></li> <li>correct state symbols <b>(1)</b></li> </ul>	<p>Example of equation:</p> $\text{Mg(s)} + \text{H}_2\text{SO}_4\text{(aq)} \rightarrow \text{MgSO}_4\text{(aq)} + \text{H}_2\text{(g)}$ <p>OR</p> $\text{Mg(s)} + 2\text{H}^+\text{(aq)} \rightarrow \text{Mg}^{2+}\text{(aq)} + \text{H}_2\text{(g)}$ <p>M2 dependent on M1 or near miss (e.g. missing 2 on <math>2\text{H}^+</math>)</p>	<b>2</b>

Question Number	Answer	Additional Guidance	Mark
<b>19(b)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>moles calculated correctly for magnesium <b>(1)</b></li> <li>moles calculated correctly for acid <b>(1)</b></li> <li>justification of both the reacted moles being the smaller value as a 1:1 stoichiometry (and Mg being in excess) <b>(1)</b></li> </ul>	<p>Example answer:</p> <p><math>0.5 \div 24.3 = 0.020576</math> moles of Mg  Allow use of 24 for 24.3 gives 0.020833  Allow 0.020  Do not award 0.02</p> <p><math>0.2 \times (25 \div 1000) = 0.005</math> moles of acid</p> <p>0.005 moles of each react as it is a 1:1 relationship  (This can be shown in working/text, but must not be contradicted in final answer)</p> <p>Ignore any further workings  e.g. <math>0.005 + 0.005 = 0.01</math></p> <p>TE from equation for stoichiometry</p>	<b>3</b>

Question Number	Answer	Additional Guidance	Mark
19(c)(i)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>suitable choice of scale so that the points cover at least 50% of the grid in both directions and allow for extrapolation AND correct choice of axes suitably labelled including units (1)</li> <li>all points plotted correctly (1)</li> </ul>	<p>Example of graph:</p>  <p>Allow units in brackets e.g. (min) instead of "/ min"</p> <p>NB Lines do not have to be present for 19(c)(i)</p> <p>Ignore scale breaks between 0 and 20/22 on the y-axis that allow for M1 and M2 to be scored</p>	2

Question Number	Answer	Additional Guidance	Mark
<b>19(c)(ii)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>two straight lines of best fit with the cooling curve extrapolated back to 2 minutes <b>(1)</b></li> <li>calculation of temperature change from the graph at 2 minutes <b>(1)</b></li> </ul>	<p><u>Example of calculation:</u></p> <p>Ignore points 2, 3 and 4 being joined by a line</p> <p>43.5 – 22.0 = 21.5(°C) TE from the graph in 19(c)(i)</p>	<b>2</b>

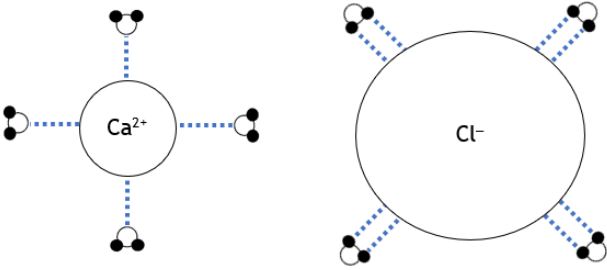

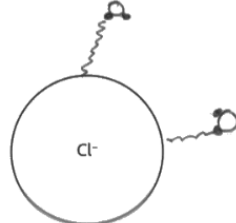

Question Number	Answer	Additional Guidance	Mark
<b>19(d)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>recall of equation <b>(1)</b></li> <li>substitution of correct values <b>(1)</b></li> <li>conversion to molar quantity <b>(1)</b></li> <li>correct sign <b>and</b> units <b>(1)</b></li> </ul>	<p><u>Example calculation:</u></p> <p><math>\Delta H = (-)mc\Delta T</math></p> <p><math>\Delta H = 25 \times 4.18 \times 21.5 = 2246.75(\text{J})</math></p> <p><math>\Delta H \div 0.005 = (-)449\,350 \text{ (J mol}^{-1}\text{)} / (-)449 \text{ (kJ mol}^{-1}\text{)}</math></p> <p><math>-449\,350 \text{ J mol}^{-1} / -449 \text{ kJ mol}^{-1}</math> TE throughout and from 19(c)(ii) and 19(a) [– 413.8kJ mol<sup>-1</sup> scores 4 if 19.8 used as <math>\Delta T</math> ]</p> <p>If mass of 25.5g is used, then the answer will be –458 337 J mol<sup>-1</sup> / –458 kJ mol<sup>-1</sup> for 3 marks</p> <p>Ignore SF except 1SF Ignore rounding</p> <p>Correct answer with sign and units scores (4)</p>	<b>4</b>

**(Total for Question 19 = 13 marks)**

Question Number	Answer	Additional Guidance	Mark																				
20 (a)*	<p>This question assesses the student's ability to show a coherent and logically structured answer with linkages and fully sustained reasoning.</p> <p>Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning.</p> <p>The following table shows how the marks should be awarded for indicative content.</p> <table><tr><th>Number of indicative marking points seen in answer</th><th>Number of marks awarded for indicative marking points</th></tr><tr><td>6</td><td>4</td></tr><tr><td>5-4</td><td>3</td></tr><tr><td>3-2</td><td>2</td></tr><tr><td>1</td><td>1</td></tr><tr><td>0</td><td>0</td></tr></table> <p>The following table shows how the marks should be awarded for structure and lines of reasoning</p> <table><tr><th></th><th>Number of marks awarded for structure of answer and sustained lines of reasoning</th></tr><tr><td>Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughout</td><td>2</td></tr><tr><td>Answer is partially structured with some linkages and lines of reasoning</td><td>1</td></tr><tr><td>Answer has no linkages between points and is unstructured</td><td>0</td></tr></table>	Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points	6	4	5-4	3	3-2	2	1	1	0	0		Number of marks awarded for structure of answer and sustained lines of reasoning	Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughout	2	Answer is partially structured with some linkages and lines of reasoning	1	Answer has no linkages between points and is unstructured	0	<p>Guidance on how the mark scheme should be applied.</p> <p>The mark for indicative content should be added to the mark for lines of reasoning. For example, a response with five indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning).</p> <p>If there were no linkages between the points, then the same indicative marking points would yield an overall score of 3 marks (3 marks for indicative content and no marks for linkages).</p> <p>In general, it would be expected that 5 or 6 indicative points would get 2 reasoning marks, and 3 or 4 indicative points would get 1 mark for reasoning, and 0, 1 or 2 indicative points would score zero marks for reasoning.</p> <p>If there is any incorrect chemistry, deduct mark(s) from the reasoning. If no reasoning mark(s) awarded do not deduct mark(s).</p> <p>Comment: Look for the indicative marking points first, then consider the mark for the structure of the answer and sustained line of reasoning.</p>	6
Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points																						
6	4																						
5-4	3																						
3-2	2																						
1	1																						
0	0																						
	Number of marks awarded for structure of answer and sustained lines of reasoning																						
Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughout	2																						
Answer is partially structured with some linkages and lines of reasoning	1																						
Answer has no linkages between points and is unstructured	0																						

	<p><b>Indicative content:</b></p> <ul style="list-style-type: none"> <li>IP1: fluorine molecules <b>only</b> have London forces (instantaneous dipole-induced dipole) between them (as it has a symmetrical electron cloud/is a symmetrical/non-polar molecule.)</li> <li>IP2: hydrogen chloride is a polar molecule as chlorine is more electronegative than hydrogen.</li> <li>IP3: HCl forms permanent dipole-permanent dipole interactions in addition to London forces.</li> <li>IP4: methanol contains a hydrogen attached to a small electronegative element so can form hydrogen bonds (in addition to permanent dipole-permanent dipole interactions and London Forces).</li> <li>IP5: hydrogen bonds are the strongest intermolecular forces so take the most energy to break.</li> <li>IP6: London forces are the weakest intermolecular forces, so fluorine has the lowest boiling temperature.</li> </ul>	<p>Allow dispersion forces / van der Waals forces Allow no dipole-dipole forces in place of "only"</p> <p>Allow H and Cl have different electronegativities</p> <p>Allow just "permanent dipole interactions"</p> <p>Allow oxygen in place of the small electronegative element</p> <p>Energy and boiling temperature need only be referenced once each in relation to H-bonds and/or London forces in order to gain IP5 and IP6</p> <p>Allow reverse arguments for IP5 and IP6</p> <p>Ignore references to shapes, sizes and surface areas</p>

Question Number	Answer	Additional Guidance	Mark
20(b)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>the oxygen is closest to the calcium ion</li> <li>the hydrogen is closest to the chloride ion</li> </ul>	<p>(A minimum of two water molecules should be drawn for each ion – penalise once only)</p> <p>E.g.</p>  <p>Allow displayed formula of water  Allow diagrams without dotted lines  Allow only one hydrogen of each water molecule closest to the chloride e.g.</p>  <p>A singular water molecule correctly orientated between the ions scores 1</p> <p>Dipoles are not required but if shown they must be correct</p> <p>Incorrectly labelled dipoles as charges should be penalised once, whether on water (or conversely on ions)</p> <p>Do not award O<sub>2</sub>H, but if molecules are unshaded assume they are H<sub>2</sub>O</p>	2

Question Number	Answer	Additional Guidance	Mark
<b>20(c)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• Iodine has more electrons (per molecule) (than bromine) <b>(1)</b></li> <li>• so stronger London forces between molecules / I<sub>2</sub> (mean a higher melting temperature for iodine) <b>(1)</b></li> </ul>	<p>Accept reverse arguments.</p> <p>If numbers of electrons are given they must be correct for molecules, not the atoms.</p> <p>Accept stronger van der Waals/induced dipole-induced dipole forces / dispersion forces Do not award between atoms Allow "between iodine"</p>	<b>2</b>

**(Total for Question 20 = 10 marks)**

Question Number	Answer	Additional Guidance	Mark
<b>21 (a)</b>		Example of a calculation:	<b>4</b>
	• calculation of mass of oxalate remaining	(1) $6.0 \times 0.3 = \mathbf{1.8}$ (g) will remain as oxalate	
	• 4.2 g will decompose to carbonate	(1) $6.0 - 1.8 = \mathbf{4.2}$ (g) will decompose	
	• $M_r$ of oxalate and carbonate used to give mass of carbonate	(1) $(4.2 \div 112.3) \times 84.3 = \mathbf{3.15}$ (g)	
	• final answer	(1) $3.15 + 1.8 = \mathbf{4.95}$ (g)	
	<b>Alternative method 1:</b>		
	• calculate moles of oxalate	(1) $6.0 \div 112.3 = \mathbf{0.0534}$ (mol)	
	• calculate 70%	(1) $0.7 \times 0.0534 = \mathbf{0.0374}$ (mol)	
	• calculation of $M_r$ of CO and mass lost	(1) $28 \times 0.0373 = \mathbf{1.047}$ (g)	
	• subtract from original mass	(1) $6.0 - 1.047 = \mathbf{4.95(3)}$ (g)	
	<b>Alternative method 2:</b>		
	• calculate mass that has decomposed	(1) $6.0 \times 0.7 = \mathbf{4.2}$ (g)	
	• calculate moles that have decomposed	(1) $(4.2 \div 112.3) = \mathbf{0.0374}$ (mol)	
	• calculate mass of carbonate	(1) $0.0374 \times 84.3 = \mathbf{3.15}$ (g)	
	• addition of remaining solid	(1) $3.15 + (6 - 4.2) = \mathbf{4.95}$ (g)	
	continued on next page		

	<p><b>Alternative method 3:</b></p> <ul style="list-style-type: none"> <li>• <math>M_r</math> of CO and oxalate</li> <li>• calculation of mass of CO</li> <li>• 70% of mass of CO</li> <li>• subtraction of mass of CO</li> </ul>	<p><b>(1)</b> 28 <b>and</b> 112.3</p> <p><b>(1)</b> <math>6.0 \times (28 \div 112.3) = \mathbf{1.496}</math> (g)</p> <p><b>(1)</b> <math>1.496 \times 0.7 = \mathbf{1.047}</math> (g)</p> <p><b>(1)</b> <math>6.0 - 1.047 = \mathbf{4.95(3)}</math> (g)</p> <p>Ignore SF</p> <p>Correct answer scores 4</p>

Question Number	Answer	Additional Guidance	Mark
<b>21 (b)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>the temperature of decomposition of carbonates / stability increases down the group <b>(1)</b></li> <li>(this is because) the size of the cation increases but has the same charge <b>(1)</b></li> <li>so is less polarising (of the C–O bond) <b>(1)</b></li> </ul>	<p>Accept reverse arguments</p> <p>Allow charge density decreases (down the group)</p> <p>The trend down the group must be mentioned for all 3 marks to be awarded</p>	<b>3</b>

Question Number	Answer	Additional Guidance	Mark
<b>21 (c)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>the magnesium carbonate may begin to decompose (before the oxalate decomposition is complete).</li> </ul>	<p>Allow the sample would be contaminated with magnesium oxide</p>	<b>1</b>

**(Total for Question 21 = 8 marks)**

## Section C

Question Number	Answer	Additional Guidance	Mark
<b>22(a)</b>	<p>An answer that makes reference to the following points: A diagram that includes:</p> <ul style="list-style-type: none"> <li>carbon singly covalently bonded to two chlorine atoms and three lone pairs on each chlorine (1)</li> <li>carbon doubly bonded to an oxygen atom and two lone pairs on the oxygen (1)</li> </ul>	<p>Penalise lack of lone pairs once only</p> <p>Allow any representation of electrons</p> <p>Allow individual electrons spread out, rather than in pairs</p> <p>Allow horizontal shared pairs of electrons</p> <p>Ignore lines representing covalent bonds</p>	<b>2</b>

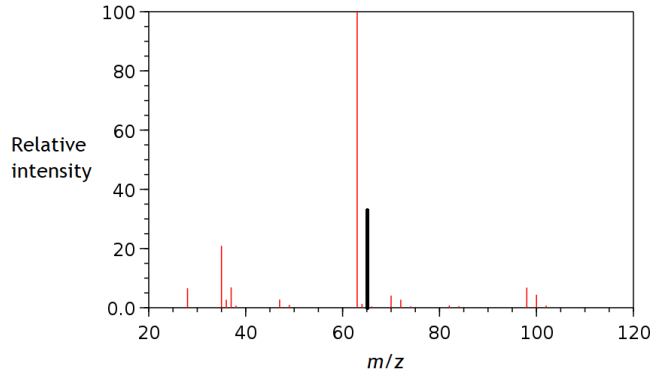

Question Number	Answer	Additional Guidance	Mark
<b>22(b)(i)</b>	<p>An explanation that makes reference to the following points:</p> <p>Any two pairs from the three:</p> <ul style="list-style-type: none"> <li>decrease the temperature (1)</li> <li>as the (forward) reaction is exothermic (1)</li> <li>increase the pressure (1)</li> <li>as there a fewer moles of (gas) on the product side (1)</li> </ul> <p><b>EITHER</b></p> <ul style="list-style-type: none"> <li>remove the phosgene (as it is formed) (1)</li> <li>to reduce the concentration of product (so equilibrium moves to the right) (1)</li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>add more CO / Cl<sub>2</sub> (1)</li> <li>to increase the concentration of the reactants (so equilibrium moves to the right) (1)</li> </ul>	<p>Ignore references to rate of reaction</p> <p>Allow T↓</p> <p>Allow “favours the exothermic reaction”</p> <p>Allow P↑</p> <p>if numbers are quoted, they must be 2:1</p> <p>Allow “favours the side with fewer moles”</p>	<b>4</b>

Question Number	Answer	Additional Guidance	Mark
<b>22 (b)(ii)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• correct species</li> <li>• correct state symbols</li> <li>• correct arrows</li> <li>• calculation of value</li> </ul>	<p>Example of an answer:</p> $  \begin{array}{ccc}  & \xrightarrow{-107.6} & \text{COCl}_2(\text{g}) \\  \text{CO}(\text{g}) + \text{Cl}_2(\text{g}) & & \\  \swarrow \quad \searrow & & \nearrow \\  & 0 & \\  \text{C}(\text{s}) + \frac{1}{2}\text{O}_2(\text{g}) + \text{Cl}_2(\text{g}) & & \\  \nwarrow \quad \nearrow & & \nwarrow \\  & x & \\  \end{array}  $ <p> <math>\Delta H_f \text{ CO} = -220.1 - (-107.6)</math>  <math>= -112.5 \text{ (kJ mol}^{-1}\text{)}</math> </p> <p>Accept state symbol for C(s, graphite)</p> <p>Ignore absence of arrow and value to chlorine</p> <p>Numbers are not required on the cycle</p>	<b>4</b>

Question Number	Answer	Additional Guidance	Mark
<b>22(c)(i)</b>	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• chlorine isotopes (35 and 37) are in the ratio of 3:1</li> <li>• (as there are) two chlorine atoms give the ratio of 9:6:1</li> </ul>	<p>Accept <math>^{37}\text{Cl}</math> 75% : <math>^{35}\text{Cl}</math> 25%</p> <p>Allow this shown in workings e.g. <math>\text{CO}^{37}\text{Cl}^{37}\text{Cl}^{(+)} = 102</math>, <math>\text{CO}^{35}\text{Cl}^{37}\text{Cl}^{(+)} = 100</math>, <math>\text{CO}^{35}\text{Cl}^{35}\text{Cl}^{(+)} = 98</math></p> <p>Do not award <math>^{36}\text{Cl}</math></p> <p>Mark independently</p> <p>Reference to isotopes of carbon should be penalised once</p>	<b>2</b>

Question Number	Answer	Additional Guidance	Mark
<b>22(c)(ii)</b>	An answer that makes reference to the following point <ul style="list-style-type: none"> <li><math>\text{CO}^{35}\text{Cl}^+</math></li> </ul>	Allow the + on any of the atoms  Ignore brackets	<b>1</b>

Question Number	Answer	Additional Guidance	Mark
<b>22(c)(iii)</b>	An answer that makes reference to the following point <ul style="list-style-type: none"> <li>peak drawn at 65 with relative intensity of 33.3</li> </ul>	Example of completed graph:  Allow a peak height between 30-35	<b>1</b>

Question Number	Answer	Additional Guidance	Mark
<b>22 (d)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• 1795 (cm<sup>-1</sup>)</li> <li>• (from the) C=O (stretching vibrations)</li> </ul>	<p><b>(1)</b> Allow a number or range within 1630-1850 (cm<sup>-1</sup>)</p> <p><b>(1)</b> M2 is dependent on M1</p> <p>Allow a number or range within 550-850 (cm<sup>-1</sup>) <b>and</b> C-Cl (stretching vibrations) for 2 marks</p> <p>Ignore acyl chloride</p> <p>Do not award M2 for aldehydes/ketones</p>	<b>1</b>

Question Number	Answer	Additional Guidance	Mark
<b>22(e)(i)</b>	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>• balanced equation</li> </ul>	<p><math>2\text{CHCl}_3 + \text{O}_2 \rightarrow 2\text{COCl}_2 + 2\text{HCl}</math></p> <p>Accept multiples of the equation</p> <p>Ignore state symbols even if incorrect</p>	<b>1</b>

Question Number	Answer	Additional Guidance	Mark
<b>22(e)(ii)</b>	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>oxygen concentration will decrease</li> </ul>	<p>Allow oxygen used up  Allow [O<sub>2</sub>] decreases  Allow volume of oxygen decreases</p> <p>Do not award "air is used up"</p> <p>"Reactants are used up" is insufficient as doesn't apply information from the question</p> <p>Comments about trichloromethane decreasing negate the oxygen mark</p>	<b>1</b>

Question Number	Answer	Additional Guidance	Mark
<b>22(e)(iii)</b>	<p>An answer that makes reference to the following point</p> <ul style="list-style-type: none"> <li>use a fume cupboard (due to toxic and irritant gases)</li> </ul>	<p>Allow open in a well-ventilated laboratory / open outside / wear a <b>gas</b> mask</p> <p>Ignore eye protection / laboratory coats / gloves  Ignore just "mask" and "do not inhale"</p> <p>Do not award face shield</p>	<b>1</b>

Question Number	Answer	Additional Guidance	Mark
<b>22(e)(iv)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>no, because some of the <math>\text{HCl}/\text{COCl}_2</math> may have dissolved into the chloroform / be trapped as bubbles in the liquid</li> </ul>	Allow may have reacted (with oxygen) to give (toxic) phosgene / $\text{COCl}_2$	<b>1</b>

**(Total for Question 22 = 20 marks)**

**Total for Section C = 20 marks**

**Total for Paper = 80 marks**
