Pearson Edexcel

International Advanced Subsidiary Level in Physics
(WPH11) Paper 01: Mechanics and Materials

Question Number	Answer	Mark
1	<p>The correct answer is C</p> <p>A is incorrect because the numerator and denominator are the wrong way around, and a factor of 1 000 is missing in the numerator</p> <p>B is incorrect because the factor 750 should be in the denominator and the 1 000 in the numerator</p> <p>D is incorrect because the numerator and denominator are the wrong way around.</p>	1
2	<p>The correct answer is B</p> <p>A is incorrect because the upthrust is constant</p> <p>C is incorrect because the upthrust is constant and the viscous drag is increasing</p> <p>D is incorrect because the viscous drag is increasing</p>	1
3	<p>The correct answer is D</p> <p>A is incorrect because force is a vector</p> <p>B is incorrect because momentum is a vector</p> <p>C is incorrect because velocity is a vector</p>	1
4	<p>The correct answer is C</p> <p>A is incorrect because area represents work done per unit volume</p> <p>B is incorrect because area represents work done per unit volume</p> <p>D is incorrect because the breaking point is outside the linear region</p>	1
5	<p>The correct answer is B</p> <p>A is incorrect because air resistance would reduce the acceleration</p> <p>C is incorrect because drop time is unaffected by horizontal motion</p> <p>D is incorrect because a greater time would give a lower acceleration</p>	1

Question Number	Answer	Mark
6	<p>The correct answer is B because for a constant resultant force acceleration increases if mass decreases</p> <p>A is incorrect because a constant acceleration for a decreasing mass would require a decreasing resultant force</p> <p>C is incorrect because a decreasing acceleration for a decreasing mass would require a decreasing resultant force</p> <p>D is incorrect because a decreasing acceleration for a decreasing mass would require a decreasing resultant force</p>	1
7	<p>The correct answer is D</p> <p>A is incorrect because springs in series increase the extension and springs in parallel decrease the extension for the same force</p> <p>B is incorrect because springs in series increase the extension for the same force</p> <p>C is incorrect because springs in parallel decrease the extension for the same force</p>	1
8	<p>The correct answer is D because the area below the t axis represents negative displacement</p> <p>A is incorrect because P is above the line and Q should be subtracted</p> <p>B is incorrect because P is above the line</p> <p>C is incorrect because Q should be subtracted</p>	1
9	<p>The correct answer is D</p> <p>A is incorrect because the distance moved by the force is not $\Delta h \cos \theta$</p> <p>B is incorrect because the distance moved by the force is not $\Delta h / \cos \theta$</p> <p>C is incorrect because the distance moved by the force is not $\Delta h \sin \theta$</p>	1
10	<p>The correct answer is B</p> <p>A is incorrect because the spring constant is $\Delta F / \Delta x$</p> <p>C is incorrect because the spring constant is $\Delta F / \Delta x$</p> <p>D is incorrect because the spring constant is $\Delta F / \Delta x$</p>	1

--	------------------------------	----------

Question Number	Answer	Mark
19(a)	The viscosity decreases (with temperature) (1)	1
19(b)(i)	Use of $V = (4/3)\pi r^3$ (1) Use of $\rho = m / V$ (1) Use of $W = m g$ (1) $W = 4.76 \times 10^{-3} \text{ N}$ (1) <u>Example of calculation</u> $\text{volume} = (4/3)\pi \times (3.5 \times 10^{-3} \text{ m})^3 = 1.80 \times 10^{-7} \text{ m}^3$ $m = 1.80 \times 10^{-7} \text{ m}^3 \times 2.70 \times 10^3 \text{ kg m}^{-3} = 4.85 \times 10^{-4} \text{ kg}$ $W = 4.85 \times 10^{-4} \text{ kg} \times 9.81 \text{ N kg}^{-1} = 4.76 \times 10^{-3} \text{ N}$	4
19(b)(ii)	Use of $F = 6\pi \eta r v$ (1) Use of $U = \text{weight of fluid displaced}$ (1) Comparison of F with $W - U$ and conclusion consistent with student's values (1) <u>Example of calculation</u> $D = 6\pi \times 0.95 \text{ Pa s} \times 0.0035 \text{ m} \times 0.0405 \text{ m} = 2.54 \times 10^{-3} \text{ N}$ $U = 1.80 \times 10^{-7} \text{ m}^3 \times 1.26 \times 10^3 \text{ kg m}^{-3} \times 9.81 \text{ N kg}^{-1} = 2.22 \times 10^{-3} \text{ N}$ $W - U = 4.76 \times 10^{-3} \text{ N} - 2.22 \times 10^{-3} \text{ N} = 2.54 \times 10^{-3} \text{ N}$ $2.54 \times 10^{-3} \text{ N} = D \therefore \text{Stokes law obeyed}$	3
19(b)(iii)	Low speed Or Laminar flow Or Small sphere [Accept reference to wide cylinder] (1)	1
19(c)	Viscosity of blood is much lower (1) Drag will be lower for given velocity (proportional to diameter) (1) Reducing diameter gives less weight (proportional to cube of diameter) (1) Forces balance at lower speed Or Terminal velocity lower (1) Laminar flow needs low speed (1) Viscosity of blood much lower (1) (For the original sphere) drag would be (much) lower at same velocity (1)	5

	<p>So terminal velocity would be (much) too large for Stokes' law (1)</p> <p>Reducing r reduces W much more than D OR W proportional to r^3 but D proportional to r (1)</p> <p>(With smaller sphere) forces will still balance at low speed (1)</p>
