

# Mark Scheme (Results)

Summer 2022

Pearson Edexcel International Advanced  
Subsidiary Level  
In Chemistry (WCH12)  
Paper 01: Energetics, Group Chemistry,  
Halogenoalkanes and Alcohols

Question number	Answer	Mark
1	<p><b>The only correct answer is A</b> (<math>2\text{Al(s)} + 1\frac{1}{2}\text{O}_2\text{(g)} \rightarrow \text{Al}_2\text{O}_3\text{(s)}</math>)</p> <p><i>B is incorrect because oxygen exists as O<sub>2</sub> in its standard state</i></p> <p><i>C is incorrect because standard enthalpy change of formation is for the formation of 1 mol of a compound</i></p> <p><i>D is incorrect because standard enthalpy change of formation is for the formation of 1 mol of a compound and oxygen exists as O<sub>2</sub> in its standard state</i></p>	(1)

Question number	Answer	Mark
2	<p><b>The only correct answer is A</b> (gains electrons and decreases in oxidation number)</p> <p><i>B is incorrect because oxidising agents are reduced during a reaction so there is a decrease in oxidation number</i></p> <p><i>C is incorrect because oxidising agents are reduced during a reaction so they gain electrons</i></p> <p><i>D is incorrect because oxidising agents are reduced during a reaction so they gain electrons and there is a decrease in oxidation number</i></p>	(1)

Question number	Answer	Mark
3	<p><b>The only correct answer is B</b> (<math>\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2\text{OH}</math>)</p> <p><i>A is incorrect because branching in the carbon chain reduces the boiling temperature of isomeric alcohols</i></p> <p><i>C is incorrect because alkanes do not have hydrogen bonding and have lower boiling temperatures than alcohols with a similar number of electrons</i></p> <p><i>D is incorrect because alkanes do not have hydrogen bonding and have lower boiling temperatures than alcohols with a similar number of electrons</i></p>	(1)

Question number	Answer	Mark
4	<p><b>The only correct answer is B</b> (potassium chlorate(III))</p> <p><i>A is incorrect because the oxidation number of chlorine in <math>KClO_2</math> is +3</i></p> <p><i>C is incorrect because the oxidation number of chlorine in <math>KClO_2</math> is +3</i></p> <p><i>D is incorrect because the oxidation number of chlorine in <math>KClO_2</math> is +3</i></p>	(1)

Question number	Answer	Mark
5(a)	<p><b>The only correct answer is D</b> (<math>Ca + 2H_2O \rightarrow Ca(OH)_2 + H_2</math>)</p> <p><i>A is incorrect because <math>CaO</math> is not a product of the reaction</i></p> <p><i>B is incorrect because <math>CaO_2</math> is an incorrect formula for calcium oxide</i></p> <p><i>C is incorrect because <math>CaOH</math> is an incorrect formula for calcium hydroxide</i></p>	(1)

Question number	Answer	Mark
5(b)	<p><b>The only correct answer is A</b> (calcium oxidised, hydrogen reduced)</p> <p><i>B is incorrect because oxygen is not reduced</i></p> <p><i>C is incorrect because hydrogen is not oxidised and calcium is not reduced</i></p> <p><i>D is incorrect because hydrogen is not oxidised and oxygen is not reduced</i></p>	(1)

Question number	Answer	Mark
6	<p><b>The only correct answer is A</b> (<math>\text{BaCO}_3(\text{s}) + 2\text{H}^+(\text{aq}) \rightarrow \text{Ba}^{2+}(\text{aq}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{l})</math>)</p> <p><i>B is incorrect because <math>\text{Ba}_2\text{CO}_3</math> is not the formula for barium carbonate</i></p> <p><i>C is incorrect because solid barium carbonate should not be split up into ions</i></p> <p><i>D is incorrect because hydrochloric acid is in solution and should be split up into ions and <math>\text{Cl}^-</math> are spectator ions</i></p>	(1)

Question number	Answer	Mark
7	<p><b>The only correct answer is D</b> (Reagent: <math>\text{NaOH}(\text{aq})</math>, Test for gas: damp red litmus paper turns blue)</p> <p><i>A is incorrect because hydrochloric acid does not react with ammonium ions</i></p> <p><i>B is incorrect because hydrochloric acid does not react with ammonium ions</i></p> <p><i>C is incorrect because ammonia is produced and it is alkaline so turns damp red litmus paper blue</i></p>	(1)

Question number	Answer	Mark
8	<p><b>The only correct answer is D</b> (violet)</p> <p><i>A is incorrect because iodine is produced in the reaction and it is brown in aqueous solution but violet in a non-polar organic solvent</i></p> <p><i>B is incorrect because chlorine gas is green</i></p> <p><i>C is incorrect because bromine is orange in a non-polar organic solvent</i></p>	(1)

Question number	Answer	Mark
9(a)	<p><b>The only correct answer is C</b> (yellow to orange)</p> <p><i>A is incorrect because methyl orange is yellow in alkaline solution</i></p> <p><i>B is incorrect because methyl orange is yellow in alkaline solution and turns red when excess acid has been added</i></p> <p><i>D is incorrect because methyl orange turns red when excess acid is added</i></p>	(1)

Question number	Answer	Mark
9(b)	<p><b>The only correct answer is C</b> (22.80, 22.35, 22.40 (cm<sup>3</sup>))</p> <p><i>A is incorrect because the first titre should be higher than the other two titres</i></p> <p><i>B is incorrect because the second and third titres should be concordant and lower than the first titre</i></p> <p><i>D is incorrect because the second and third titres should be lower than the first titre</i></p>	(1)

Question number	Answer	Mark
9(c)	<p><b>The only correct answer is B</b> (0.0668 (mol dm<sup>-3</sup>))</p> <p><i>A is incorrect because the volumes have been used the wrong way round</i></p> <p><i>C is incorrect because the mole ratio of 2 : 1 has not been used</i></p> <p><i>D is incorrect because the mole ratio has been used as 2 H<sub>2</sub>SO<sub>4</sub> : 1 NaOH</i></p>	(1)

Question number	Answer	Mark
10(a)	<p><b>The only correct answer is D</b> (decreasing the activation energy of the reaction)</p> <p><i>A is incorrect because only an increase in temperature causes the average kinetic energy of the molecules to increase</i></p> <p><i>B is incorrect because only a decrease in temperature causes the average kinetic energy of the molecules to decrease</i></p> <p><i>C is incorrect because if the activation energy increased, the rate of decomposition would decrease</i></p>	(1)

Question number	Answer	Mark
10(b)	<p><b>The only correct answer is D</b> (<math>0.833 \text{ mol dm}^{-3}</math>)</p> <p><i>A is incorrect because the volume of oxygen has not been converted into moles</i></p> <p><i>B is incorrect because the 2 : 1 mole ratio has been used the wrong way around</i></p> <p><i>C is incorrect because the 2 : 1 mole ratio has not been used</i></p>	(1)

Question number	Answer	Mark
11	<p><b>The only correct answer is A</b> (change in equilibrium position: left, enthalpy change: endothermic)</p> <p><i>B is incorrect because an exothermic reaction would decrease the concentration of iodine</i></p> <p><i>C is incorrect because the equilibrium position would shift to the left</i></p> <p><i>D is incorrect because the equilibrium position would shift to the left</i></p>	(1)

Question number	Answer	Mark
12	<p><b>The only correct answer is C (nucleophile)</b></p> <p><i>A is incorrect because electrophiles attack atoms with a slight negative charge</i></p> <p><i>B is incorrect because free radicals attack neutral atoms</i></p> <p><i>D is incorrect because oxidising agents remove electrons from a species</i></p>	(1)

Question number	Answer	Mark
13	<p><b>The only correct answer is B (P and Q only)</b></p> <p><i>A is incorrect because Q is also primary alcohol and will be oxidised to a carboxylic acid</i></p> <p><i>C is incorrect because R is a secondary alcohol and will be oxidised to a ketone</i></p> <p><i>D is incorrect because R is a secondary alcohol and will be oxidised to a ketone and S is a tertiary alcohol so is not easily oxidised</i></p>	(1)

Question number	Answer	Mark
14(a)	<p><b>The only correct answer is C (concentrated phosphoric(V) acid)</b></p> <p><i>A is incorrect because acidified potassium manganate(VII) converts an alkene into a diol</i></p> <p><i>B is incorrect because aqueous bromine reacts with an alkene to form a bromoalcohol</i></p> <p><i>D is incorrect because phosphorus(V) chloride reacts with an alcohol to form a chloroalkane</i></p>	(1)

Question number	Answer	Mark
14(b)	<p><b>The only correct answer is C</b> (<math>\text{C}_6\text{H}_{11}\text{OH} + [\text{O}] \rightarrow \text{C}_6\text{H}_{10}\text{O} + \text{H}_2\text{O}</math> )</p> <p><i>A is incorrect because [O] is needed from the oxidising agent and hydrogen gas would not be produced</i></p> <p><i>B is incorrect because [O] is needed from the oxidising agent and hydrogen atoms would not be produced</i></p> <p><i>D is incorrect because the oxidising agent is not oxygen gas</i></p>	(1)

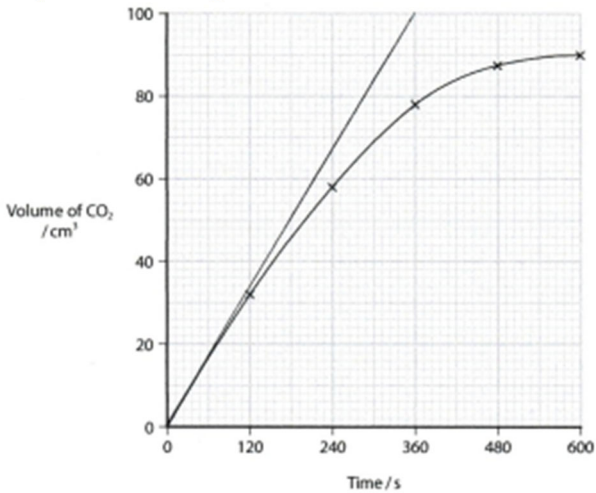

Question number	Answer	Mark
14(c)	<p><b>The only correct answer is C</b> (3750-3200, 1669-1645)</p> <p><i>A is incorrect because there is a C-H bond in both compounds</i></p> <p><i>B is incorrect because there is a C-H bond in both compounds and there is no C=O in cyclohexene</i></p> <p><i>D is incorrect because there is no C=O in cyclohexene</i></p>	(1)

(Total for Section A = 20 marks)

Question Number	Answer	Additional Guidance	Mark
15(a)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li> <b>Size (and charge)</b>            calcium ion / <math>\text{Ca}^{2+}</math> has a larger (ionic) radius than a magnesium ion (but the same charge)  <b>or</b>            magnesium ion / <math>\text{Mg}^{2+}</math> has a smaller (ionic) radius / is smaller than a calcium ion (but the same charge) <b>(1)</b> </li> <li> <b>Polarising power</b>            so calcium ion / <math>\text{Ca}^{2+}</math> causes less polarisation / distortion  <b>or</b>            magnesium ion / <math>\text{Mg}^{2+}</math> causes more polarisation / distortion <b>(1)</b> </li> <li> <b>What is polarised</b>            of the carbonate ion / <math>\text{CO}_3^{2-}</math> / anion / negative ion / C–O bonds / C=O bonds / CO bonds <b>(1)</b> </li> </ul>	<p>Penalise omission of ‘ion’ or just magnesium / Mg / calcium / Ca without charge once only in M1 and M2            Allow reverse argument for magnesium ions in M1 and M2</p> <p>Allow size for radius or just ‘bigger / smaller’            Allow ionic radius / size of cation increases down the group / decreases up the group            Allow calcium carbonate has a larger <b>cation</b>            Allow calcium ions have a lower charge density            Allow calcium ions have more shells of electrons</p> <p>Ignore effective nuclear charge / mass : charge ratio            Ignore atomic radius            Ignore omission of same charge</p> <p>Do not award M1 if mention of different / incorrect charges on magnesium and calcium ions</p> <p>Allow polarising power of cation decreases down the group            Allow <math>\text{Ca}^{2+}</math> causes less weakening of bonds for polarisation</p> <p>Do not award just ‘the carbonate ion is less polarisable’ for M2, although this can score M3</p> <p>Allow electron cloud for ion            Do not award reference to nitrate / N-O bonds            Do not award reference to breaking unspecified bonds / (ionic) bond between cation and anion            Do not award references to intermolecular forces</p>	<b>(3)</b>

Question Number	Answer	Additional Guidance	Mark
15(b)(i)	<ul style="list-style-type: none"> <li>calculation of mol of CO<sub>2</sub></li> <li>calculation of mol of HCl</li> <li>calculation of volume of HCl <b>and</b> corresponding volume unit</li> </ul>	<p>Example of calculation:</p> <p>(1) <math>\text{mol CO}_2 = \frac{100}{24\,000} = 0.0041667 / 4.1667 \times 10^{-3} \text{ (mol)}</math></p> <p>(1) <math>\text{mol HCl} = 2 \times 0.0041667 = 0.0083333 / 8.3333 \times 10^{-3} \text{ (mol)}</math> TE on M1</p> <p>(1) <math>\text{vol HCl} = \frac{0.0083333}{0.500} \times 1000 = (16.667)</math>  <math>= 16.6 \text{ cm}^3 / 0.0166 \text{ dm}^3</math>  Do not award incorrect units e.g. <math>\text{cm}^{-3} / \text{dm}^{-3}</math></p> <p>Allow 16.67 / 16.7 <math>\text{cm}^3</math> as the theoretical volume of CO<sub>2</sub> is 100.02 / 100.2 <math>\text{cm}^3</math>  Do not award 17 <math>\text{cm}^3</math> as the theoretical volume of CO<sub>2</sub> is 102 <math>\text{cm}^3</math> so would exceed the measurable volume of the syringe</p> <p>Allow any number between 16 and 16.7 <math>\text{cm}^3</math> / 0.016 and 0.0167 <math>\text{dm}^3</math> inclusive  TE on M2  Ignore SF except 1 SF</p> <p>Correct answer with units and no working scores (3)</p> <p>Accept fractions / correct working not evaluated for M1 and M2  e.g. 1/240, 1/120</p>	(3)

Question Number	Answer	Additional Guidance	Mark
15(b)(ii)	<ul style="list-style-type: none"> <li>tangent drawn at <math>t = 0</math></li> <li>gradient</li> <li>units</li> </ul>	<p>Example of working:</p>  <p>Tangent must touch the curve for at least 24 s (2 small squares horizontally) and extend to at least 20 cm<sup>3</sup></p> <p>Gradient = <math>\frac{100}{360} = 0.27778</math> (expected value 0.25 to 0.33 for tangent at <math>t = 0</math>)  TE on tangent drawn at any time value  If no tangent drawn, allow a selected point and y/x value e.g. <math>32/120 = 0.27</math></p> <p>Stand alone mark  cm<sup>3</sup> s<sup>-1</sup> or cm<sup>3</sup> / s or <math>\frac{\text{cm}^3}{\text{s}}</math></p> <p>Allow cm<sup>3</sup> s<sup>-</sup></p>	(3)

Question Number	Answer	Additional Guidance	Mark
15(b)(iii)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>initial rate halves <b>and</b> final volume of CO<sub>2</sub> halves / is 45 (cm<sup>3</sup>)</li> </ul>	<p>Allow initial rate decreases <b>and</b> final volume of CO<sub>2</sub> decreases</p> <p>Do not award any specific decrease (e.g. decrease by a factor of 4) except for half</p>	(1)

(Total for Question 15 = 10 marks)

Question Number	Answer	Additional Guidance	Mark
16(a)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• atomic radius increases <b>or</b> distance between the nucleus and outer electrons increases <b>or</b> there are more shells / energy levels of inner electrons between the nucleus and the outer shell electrons <b>(1)</b></li> <li>• so there is less attraction (by the nucleus with a higher charge) for the bonding electrons / shared pair of electrons <b>(1)</b></li> </ul>	<p>Allow size of atoms increases / gets bigger Allow just 'more shells of electrons' Allow effective nuclear charge decreases Do not award nuclear charge decreases Do not award reference to ions / ionic radius for M1 only</p> <p>Allow greater shielding between the nucleus and the bonding electrons / shared pair of electrons <b>Note</b> – bonding / shared pair can be mentioned anywhere in the answer</p>	<b>(2)</b>

Question Number	Answer	Additional Guidance	Mark
16(b)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>three oxidation numbers of I:  <math>\text{IO}_3^- = (+)5</math>  <math>\text{I}^- = -1</math>  <math>\text{I}_2 = 0</math> </li> <li>two different species / ions / compounds (of iodine) are oxidised and reduced (to form the same species)  <b>or</b>  there is not one species / ion / compound that is being oxidised and reduced  <b>or</b>  2 different oxidation states are not produced from one oxidation state (of iodine)  <b>or</b>  only one species / oxidation state of iodine is formed </li> </ul>	<p>Allow oxidation numbers written near species in the equation</p> <p>Ignore oxidation numbers of H and O</p> <p>Do not award O.N. <math>\text{I}_2</math> is neutral / <math>\text{I}^-</math> is <math>-5</math></p> <p>Allow <math>\text{I}_2</math> / iodine is oxidised and reduced in the reverse reaction</p> <p>Allow (iodine in) <math>\text{IO}_3^-</math> is only being reduced  <b>or</b> (iodine in) <math>\text{I}^-</math> is only being oxidised</p> <p>Ignore just 'the reaction is only oxidation / reduction'</p> <p>Ignore just 'comproportionation'</p> <p>Ignore just 'I / iodine is not simultaneously oxidised and reduced'</p>	(2)

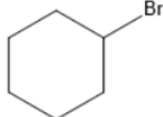

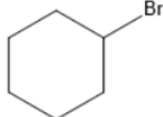

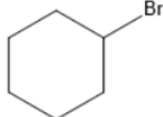

Question Number	Answer	Additional Guidance	Mark						
16(c)	<ul style="list-style-type: none"><li>sulfur dioxide / sulfur (IV) oxide / SO<sub>2</sub> produced from HBr <b>and</b> hydrogen sulfide / H<sub>2</sub>S produced from HI</li></ul>	<p>Example of table:</p> <table><tr><td>Hydrogen halide</td><td>Compound produced with the lowest oxidation number of sulfur</td></tr><tr><td>(HBr)</td><td>sulfur dioxide / SO<sub>2</sub></td></tr><tr><td>(HI)</td><td>hydrogen sulfide / H<sub>2</sub>S</td></tr></table> <p>Ignore Br<sub>2</sub> and I<sub>2</sub> <b>Note</b> - If name and formula are given, both must be correct</p>	Hydrogen halide	Compound produced with the lowest oxidation number of sulfur	(HBr)	sulfur dioxide / SO <sub>2</sub>	(HI)	hydrogen sulfide / H <sub>2</sub> S	(1)
Hydrogen halide	Compound produced with the lowest oxidation number of sulfur								
(HBr)	sulfur dioxide / SO <sub>2</sub>								
(HI)	hydrogen sulfide / H <sub>2</sub> S								

Question Number	Answer	Additional Guidance	Mark
16(d)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>all hydrogen halides have London forces (and dipole-dipole forces between molecules) <b>(1)</b></li> <li>the strength of the London forces increases as the number of electrons increases (so the boiling temperature increases from HCl to HI) <b>or</b> the strength of the London forces increases as the polarisability of the molecules increases from HCl to HI <b>(1)</b></li> <li>(only) HF has hydrogen bonding (between molecules) <b>(1)</b></li> <li>hydrogen bonding is (much) stronger than London forces / dipole-dipole forces (so HF has the highest boiling temperature) <b>(1)</b></li> </ul>	<p>Allow van der Waals' forces / dispersion forces / attractions between instantaneous dipoles and induced dipoles for London forces or a description of London forces</p> <p>Ignore London forces omitted from HF Do not award this mark if ions mentioned in answer Do not award this mark if breaking H-Cl, H-Br or H-I bonds</p> <p>Ignore the strength of the London forces increases as the size of the molecule / <math>M_r</math> increases</p> <p>Do not award M3 if hydrogen bonding in any other hydrogen halide</p> <p>Allow more heat energy is needed to overcome hydrogen bonding than London forces Allow hydrogen bonding is the strongest intermolecular force / bond</p>	<b>(4)</b>

Question Number	Answer	Additional Guidance	Mark
16(e)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>calculation of mol of AgCl (1)</li> <li>calculation of mass of Cl<sup>-</sup> (1)</li> <li>calculation of percentage of Cl<sup>-</sup> (1)</li> </ul> <p>OR</p> <ul style="list-style-type: none"> <li>calculation of % by mass of Cl in AgCl (1)</li> <li>calculation of mass of Cl in residue (1)</li> <li>calculation of percentage of Cl<sup>-</sup> (1)</li> </ul>	<p>Example of calculation:</p> <p><b>Method 1</b></p> $\text{mol AgCl} = \frac{0.226}{143.4} = 0.0015760 / 1.5760 \times 10^{-3}$ $\text{mass Cl}^{-} = 1.5760 \times 10^{-3} \times 35.5 = 0.055948 \text{ (g)}$ $\% \text{ Cl}^{-} = \frac{0.055948}{0.098} \times 100 = 57.09 / 57.1 / 57 (\%)$ <p><b>Method 2</b></p> $\% \text{ by mass of Cl in AgCl} = \frac{35.5}{143.4} \times 100 = 24.756 (\%)$ $\text{mass of Cl} = 24.756 \times 0.226 = 0.055948 \text{ (g)}$ $\% \text{ by mass of Cl}^{-} \text{ in residue} = \frac{0.055948}{0.098} \times 100 = 57.09 / 57.1 / 57 (\%)$ <p>Correct answer with no working scores (3)</p> <p>Allow TE at each stage</p> <p>Allow alternative methods</p> <p>Ignore SF except 1 SF</p> <p>Accept fractions / correct working not evaluated for M1 and M2</p>	(3)

(Total for Question 16 = 12 marks)

Question Number	Answer	Additional Guidance	Mark						
17(a)	<ul style="list-style-type: none"><li>both classifications correct</li></ul>	<p>Example of table:</p> <table><tr><th>Halogenoalkane</th><th>Classification</th></tr><tr><td></td><td>secondary</td></tr><tr><td></td><td>primary</td></tr></table> <p>Allow 2° for secondary Allow 1° for primary Ignore halogenoalkane</p>	Halogenoalkane	Classification		secondary		primary	(1)
Halogenoalkane	Classification								
	secondary								
	primary								

Question Number	Answer	Additional Guidance	Mark
17(b)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>2-chloro-2-methylpropane should react faster than 1-iodobutane because it is tertiary (1)</li> <li>1-iodobutane should react faster than 2-chloro-2-methylpropane because the C–I bond enthalpy is lower than C–Cl (1)</li> <li>it is not possible to predict the relative effects of these two opposing factors / structure and bond enthalpies (1)</li> </ul>	<p>Stand alone mark</p> <p>Allow tertiary / branched chain / more branched halogenoalkanes have a higher rate of hydrolysis than primary halogenoalkanes</p> <p>Do not award secondary for 2-chlor-2-methylpropane</p> <p>Do not award tertiary carbocation</p> <p>Stand alone mark</p> <p>Allow just ‘the C–I bond is weaker / has a lower bond enthalpy than C–Cl’</p> <p>Ignore just ‘bonds in 1-iodobutane are weaker’</p> <p>Do not award H–I / H–Cl bonds</p> <p>Conditional on two opposing factors</p> <p>If M1 and M2 scored, allow ‘so it is not possible to predict the relative rate of hydrolysis’</p>	(3)

Question Number	Answer	Additional Guidance	Mark
17(c)(i)	<ul style="list-style-type: none"> <li><b>ammonia</b> (gas) would escape (from the condenser when heated under reflux)</li> <li><b>or</b></li> <li>to prevent <b>ammonia</b> (gas) escaping (from the condenser when heated under reflux)</li> </ul>	<p>Ignore just ‘ammonia will evaporate’</p> <p>Ignore concentrated alcoholic</p> <p>Ignore references to safety</p> <p>Ignore just ‘gas / reactant escapes’</p> <p>Do not award any other substance escaping</p>	(1)

Question Number	Answer	Additional Guidance	Mark
17(c)(ii)	<ul style="list-style-type: none"> <li>lone pair on N of NH<sub>3</sub> <b>and</b> curly arrow from lone pair on N to, or towards C (1)</li> <li>dipole on C-Br <b>and</b> curly arrow from C-Br bond to, or just beyond, Br (1)</li> <li>lone pair on N of NH<sub>3</sub> <b>and</b> curly arrow from lone pair on N to, or towards H (1)</li> <li>curly arrow from N-H bond to, or towards N (1)</li> </ul>	Penalise missing lone pair on N once only Penalise negative charge on NH <sub>3</sub> once only Penalise half-arrow heads once only  Do not award any charge / dipole on H Ignore any changes to final products	(4)
Example of mechanism: <div data-bbox="533 911 1503 1378" data-label="Chemical-Block"> </div>			

Question Number	Answer	Additional Guidance	Mark
17(d)	<ul style="list-style-type: none"> <li>calculation of amounts of KBr and H<sub>2</sub>SO<sub>4</sub> (1)</li> <li>calculation of amount of C<sub>2</sub>H<sub>5</sub>OH <b>and</b> statement or implication that this is the limiting quantity (1)</li> <li>calculation of maximum mass of C<sub>2</sub>H<sub>5</sub>Br formed (1)</li> </ul>	<p>Example of calculation:</p> <p>amount KBr = <math>\frac{14.90}{119} = 0.12521</math> (mol)</p> <p>amount H<sub>2</sub>SO<sub>4</sub> = <math>\frac{16.35}{98.1} = 0.16667</math> (mol)</p> <p>Allow use of 98 for <i>M<sub>r</sub></i> of H<sub>2</sub>SO<sub>4</sub> giving 0.16684 (mol)</p> <p>amount C<sub>2</sub>H<sub>5</sub>OH = <math>\frac{4.65}{46} = 0.10109 / 0.10 / 0.1</math> (mol)</p> <p><b>and</b></p> <p>any indication that the limiting reagent is C<sub>2</sub>H<sub>5</sub>OH e.g. by use of mol of ethanol in M3</p> <p>(maximum amount C<sub>2</sub>H<sub>5</sub>Br formed = 0.10109 (mol)</p> <p>maximum mass C<sub>2</sub>H<sub>5</sub>Br formed = 0.10109 x 108.9 = 11.008 / 11.01 / 11.0 / 11 (g)</p> <p>Allow use of 109 for <i>M<sub>r</sub></i> of C<sub>2</sub>H<sub>5</sub>Br giving 11.018 (g)</p> <p>Ignore SF except 1 SF, but allow 0.1 for mol C<sub>2</sub>H<sub>5</sub>OH</p>	(3)

Question Number	Acceptable Answers	Additional Guidance	Mark												
17(e)*	<p>This question assesses a student’s ability to show a coherent and logically structured answer with linkages and fully-sustained reasoning.</p> <p>Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning.</p> <p>The following table shows how the marks should be awarded for indicative content.</p> <table><tr><td>Number of indicative marking points seen in answer</td><td>Number of marks awarded for indicative marking points</td></tr><tr><td>6</td><td>4</td></tr><tr><td>5–4</td><td>3</td></tr><tr><td>3–2</td><td>2</td></tr><tr><td>1</td><td>1</td></tr><tr><td>0</td><td>0</td></tr></table> <p>The following table shows how the marks should be awarded for structure and lines of reasoning.</p>	Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points	6	4	5–4	3	3–2	2	1	1	0	0	<p>Guidance on how the mark scheme should be applied:</p> <p>The mark for indicative content should be added to the mark for lines of reasoning. For example, an answer with five indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning).</p> <p>If there are no linkages between points, the same five indicative marking points would yield an overall score of 3 marks (3 marks for indicative content and no marks for linkages).</p>	(6)
Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points														
6	4														
5–4	3														
3–2	2														
1	1														
0	0														

		Number of marks awarded for structure of answer and sustained line of reasoning		
	Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout.	2		
	Answer is partially structured with some linkages and lines of reasoning.	1		
	Answer has no linkages between points and is unstructured.	0		
	<p><b>Comment:</b> Look for the indicative marking points first, then consider the mark for structure of answer and sustained line of reasoning</p>			
			<p>In general it would be expected that 5 or 6 indicative points would get 2 reasoning marks, and 3 or 4 indicative points would get 1 mark for reasoning, and 0, 1 or 2 indicative points would score zero marks for reasoning.</p> <p><b>General points to note</b> If there is any incorrect chemistry, deduct mark(s) from the reasoning. If no reasoning mark(s) awarded do not deduct mark(s).</p>	

	<p><b>Indicative content</b></p> <ul style="list-style-type: none"> <li>• <b>IP1 –Similarity</b> Both reactions involve hydroxide ions / OH<sup>-</sup></li> <li>• <b>IP2 – Type of reaction</b> Reaction with aqueous solution is substitution <b>and</b> reaction with ethanolic solution is elimination</li> <li>• <b>IP3 – Type of reagent</b> (OH<sup>-</sup> is a) nucleophile in aqueous solution <b>and</b> a base in ethanolic solution</li> <li>• <b>IP4 – Products</b> In aqueous solution propan-2-ol / an alcohol forms <b>and</b> in ethanolic solution propene / an alkene forms</li> <li>• <b>IP5 – Equation in aqueous solution</b> <math>\text{CH}_3\text{CHBrCH}_3 + \text{OH}^- \rightarrow \text{CH}_3\text{CHOHCH}_3 + \text{Br}^-</math></li> <li>• <b>IP6 – Equation in ethanolic solution</b> <math>\text{CH}_3\text{CHBrCH}_3 + \text{OH}^- \rightarrow \text{CH}_3\text{CH=CH}_2 + \text{H}_2\text{O} + \text{Br}^-</math></li> </ul>	<p>Penalise use of incorrect halogenoalkane once only</p> <p>Allow OH<sup>-</sup> shown with both reactions anywhere in the answer e.g. in the equations Allow both reactions need heat (under reflux)</p> <p>Ignore displacement for substitution</p> <p>Ignore dehydration for elimination Do not award dehydrogenation for elimination</p> <p>If IP2 and IP3 not awarded, allow 1 IP for just ‘nucleophilic substitution’ or ‘elimination by a base’</p> <p>This can be scored from the equations</p> <p>In IP5 and IP6, allow displayed formulae / any combination of displayed and structural formulae / skeletal formula Allow KOH / KBr / K<sup>+</sup> + OH<sup>-</sup> / K<sup>+</sup> + Br<sup>-</sup> The equations must be balanced Ignore state symbols even if incorrect Ignore mechanisms even if incorrect</p>
