Subsidiary Level

In Chemistry (WCH11)

Paper 1: Structure, Bonding and Introduction to
Organic Chemistry

Section A

Question number	Answer	Mark
1	<p>The only correct answer is B (C_3H_8)</p> <p><i>A is incorrect because the empirical formula is CH_2</i></p> <p><i>C is incorrect because the empirical formula is C_2H_5</i></p> <p><i>D is incorrect because the empirical formula is CH_2</i></p>	1

Question number	Answer	Mark
2	<p>The only correct answer is C (BH_3)</p> <p><i>A is incorrect because there are 1.51×10^{23} atoms</i></p> <p><i>B is incorrect because there are 4.52×10^{23} atoms</i></p> <p><i>D is incorrect because there are 7.53×10^{23} atoms</i></p>	1

Question number	Answer	Mark
3	<p>The only correct answer is A ($0.1 \text{ g dm}^{-3} \text{ HCl}$)</p> <p><i>B is incorrect because HCl has a higher concentration of chloride ions</i></p> <p><i>C is incorrect because HCl has a higher concentration of chloride ions</i></p> <p><i>D is incorrect because HCl has a higher concentration of chloride ions</i></p>	1

Question number	Answer	Mark
4	<p>The only correct answer is D ($\text{CaCO}_3 + 2\text{NaCl} \rightarrow \text{CaCl}_2 + \text{Na}_2\text{CO}_3$)</p> <p>A is incorrect because there are no waste products</p> <p>B is incorrect because H_2 has a lower M_r than Na_2CO_3</p> <p>C is incorrect because the combined M_r of H_2O and CO_2 is lower than Na_2CO_3</p>	1

Question number	Answer	Mark
5	<p>The only correct answer is B ($^{124}_{50}\text{Sn}$)</p> <p>A is incorrect because $^{115}_{49}\text{In}$ has 66 neutrons</p> <p>C is incorrect because $^{123}_{51}\text{Sb}$ has 72 neutrons</p> <p>D is incorrect because $^{124}_{52}\text{Te}$ has 72 neutrons</p>	1

Question number	Answer	Mark
6	<p>The only correct answer is B ($1s^2 2s^2 2p^6 3s^2 3p^6$)</p> <p>A is incorrect because this is the electronic configuration of an s-block element</p> <p>C is incorrect because this could not be the electronic configuration of the ion of a p-block element</p> <p>D is incorrect because this could not be the electronic configuration of the ion of a Period 3 element</p>	1

Question number	Answer	Mark
7	<p>The only correct answer is C (carbon)</p> <p><i>A is incorrect because Al is in Period 3</i></p> <p><i>B is incorrect because the element with the highest melting temperature is in Group 4</i></p> <p><i>D is incorrect because Si is in Period 3</i></p>	1

Question number	Answer	Mark
8	<p>The only correct answer is C (Hg(l))</p> <p><i>A is incorrect because simple molecules do not conduct electricity</i></p> <p><i>B is incorrect because simple molecules do not conduct electricity</i></p> <p><i>D is incorrect because ionic compounds do not conduct electricity as solids</i></p>	1

Question number	Answer	Mark
9	<p>The only correct answer is A (N^{3-})</p> <p><i>B is incorrect because F^- has more protons than N^{3-} so greater nuclear attraction on the outer electrons</i></p> <p><i>C is incorrect because Na^+ has more protons than N^{3-} so greater nuclear attraction on the outer electrons</i></p> <p><i>D is incorrect because Al^{3+} has more protons than N^{3-} so greater nuclear attraction on the outer electrons</i></p>	1

Question number	Answer	Mark
10	<p>The only correct answer is D (Ca^{2+})</p> <p><i>A is incorrect because anions do not polarise cations</i></p> <p><i>B is incorrect because anions do not polarise cations</i></p> <p><i>C is incorrect because K^+ has a smaller charge and a greater ionic radius</i></p>	1

Question number	Answer	Mark
11	<p>The only correct answer is A (C_{60} fullerene)</p> <p><i>B is incorrect because the structure of diamond is formed by a giant lattice of carbon atoms</i></p> <p><i>C is incorrect because the structure of graphene is formed by a giant lattice of carbon atoms</i></p> <p><i>D is incorrect because the structure of graphite is formed by a giant lattice of carbon atoms</i></p>	1

Question number	Answer	Mark
12	<p>The only correct answer is A (HF)</p> <p><i>B is incorrect because there is a relatively small difference in electronegativity between oxygen and fluorine</i></p> <p><i>C is incorrect because BF_3 is a non-polar molecule</i></p> <p><i>D is incorrect because CF_4 is a non-polar molecule</i></p>	1

Question number	Answer	Mark
13	<p>The only correct answer is B (corrosive)</p> <p><i>A is incorrect because this is a precaution and not a hazard</i></p> <p><i>C is incorrect because this is a precaution and not a hazard</i></p> <p><i>D is incorrect because this is not the symbol for oxidising</i></p>	1

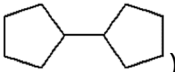

Question number	Answer	Mark
14	<p>The only correct answer is C (3,4,6-trimethyloctane)</p> <p><i>A is incorrect because the longest chain of carbon atoms is not seven</i></p> <p><i>B is incorrect because the longest chain of carbon atoms is not seven</i></p> <p><i>D is incorrect because the sum of the locant numbers is not the lowest</i></p>	1

Question number	Answer	Mark
15	<p>The only correct answer is A (burn to produce greenhouse gases)</p> <p><i>B is incorrect because they are not all carbon neutral</i></p> <p><i>C is incorrect because they are not all sustainable</i></p> <p><i>D is incorrect because they do not all biodegrade rapidly</i></p>	1

Question number	Answer	Mark
16(a)	<p>The only correct answer is D ($\text{C}_5\text{H}_{10} + \text{Br}_2 \rightarrow \text{C}_5\text{H}_9\text{Br} + \text{HBr}$)</p> <p>A is incorrect because C_5H_8 is the formula of cyclopentene and the reaction is not addition</p> <p>B is incorrect because the reaction is not addition and this product is not formed</p> <p>C is incorrect because these products are not formed</p>	1

Question number	Answer	Mark
16(b)	<p>The only correct answer is A (only the initiation step involves homolytic bond fission)</p> <p>B is incorrect because not all of the bromine is converted to radicals in the initiation step</p> <p>C is incorrect because many more propagation than termination reactions occur</p> <p>D is incorrect because additional substitution products are likely to form</p>	1

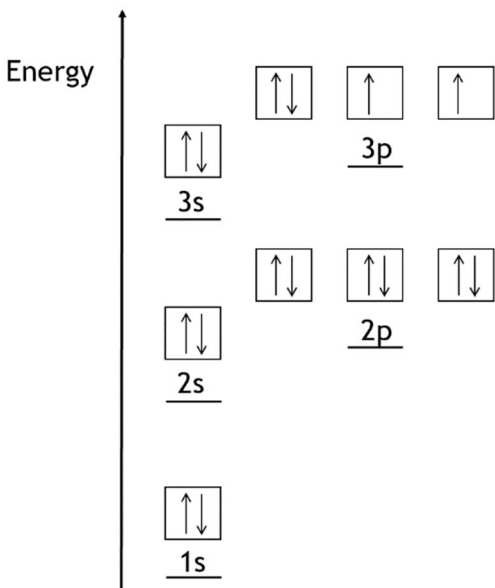

Question number	Answer	Mark
16(c)	<p>The only correct answer is D (H^\bullet)</p> <p>A is incorrect because $\text{C}_5\text{H}_9^\bullet$ radicals form in propagation reactions</p> <p>B is incorrect because Br^\bullet radicals form in propagation reactions</p> <p>C is incorrect because $\text{C}_5\text{H}_8\text{Br}^\bullet$ radicals may form in secondary propagation reactions</p>	1

Question number	Answer	Mark
16(d)	<p>The only correct answer is C ()</p> <p>A is incorrect because the molecule does not contain 10 carbon atoms</p> <p>B is incorrect because the molecule does not contain 10 carbon atoms</p> <p>D is incorrect because the molecule does not contain 18 hydrogen atoms</p>	1

Question number	Answer	Mark
17	<p>The only correct answer is B (exporting polymer waste)</p> <p>A is incorrect because biodegradable polymers are broken down by microorganisms</p> <p>C is incorrect because this removes harmful pollution</p> <p>D is incorrect because this saves energy and conserves non-renewable resources</p>	1

TOTAL FOR SECTION A = 20 MARKS

Section B

Question Number	Answer	Additional guidance	Mark
18(a)	<p>A completed diagram showing:</p> <ul style="list-style-type: none"> correctly labelled subshells (1) correctly filled boxes/orbitals (1) 	<p>Allow p subshell labelled as orbitals eg $2p_x$, $2p_y$, $2p_z$ Ignore specified number of electrons, even if incorrect eg $3p^5$ Allow paired 3p electrons in any 3p orbital Allow unpaired 3p electrons as spin down Allow half-headed arrows Do not award vertical lines for arrows Do not award paired electrons with parallel spin <u>Example of completed diagram:</u></p> 	2

Question Number	Answer	Additional guidance	Mark
18(b)	<ul style="list-style-type: none"> species and balancing correct state symbols 	<p>Example of equation:</p> $\text{S(g)} \rightarrow \text{S}^+\text{(g)} + \text{e}^{(-)}$ <p>or</p> $\text{S(g)} - \text{e}^{(-)} \rightarrow \text{S}^+\text{(g)}$ <p>(1) Do not award multiples</p> <p>M2 dependent on S/S₈ on one side of equation and charged S⁺/S₈⁺/S⁻/S₈⁻ on the other (does not need to be balanced)</p> <p>(1) Ignore (g) state symbol on electron</p> <p>$\text{S(g)} + \text{e}^{(-)} \rightarrow \text{S}^+\text{(g)} + 2\text{e}^{(-)}$ scores (1)</p>	2

Question Number	Answer	Additional guidance	Mark
18(c)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> outermost electrons in same subshell / (quantum) shell (1) Cl contains the greatest number of protons / more protons than S (1) repulsion between (paired) electrons in (3)p orbital in S (1) 	<p>Accept similar/same (electron) shielding Allow same number of shells Allow correct reference to full or partial electronic configurations for two/three elements Do not award incorrect electronic configurations</p> <p>Accept Cl has the greatest nuclear charge Ignore Cl has the greatest nuclear attraction Ignore Cl has the greatest atomic number Do not award just Cl has the greatest charge Do not award S has the smallest nuclear charge Allow Cl has the smallest atomic radius / smaller atomic radius than S Do not award S had the greatest atomic radius Do not award same/similar atomic radius Do not award outer electron same/similar distance from nucleus Do not award ionic/molecular radius</p> <p>There must be a mention of p (orbital) Allow subshell for orbital Do not award shell for orbital Allow spin-spin repulsion in p orbital/subshell Allow correct reference to stable half-full p subshell: eg stable half-full p subshell in P eg removing electron from S gives stable half-full p subshell Do not award reference to bonding electrons</p>	3

Question Number	Answer	Additional guidance	Mark
18(d)(i)	<ul style="list-style-type: none"> (atoms with the) same number of protons (1) (and) different number of neutrons (1) 	<p>Penalise use of species/particles/molecules for atoms once only</p> <p>Allow same atomic number Allow amount for number Ignore atoms of the same element Ignore electrons</p> <p>Ignore different mass number Do not award different number of electrons</p>	2

Question Number	Answer	Additional guidance	Mark
18(d)(ii)	<ul style="list-style-type: none"> Expression for relative atomic mass (1) Calculation and answer to two decimal places (1) 	<p>Example of calculation:</p> $(A_r =) \frac{32 \times 94.88 + 33 \times 0.83 + 34 \times 4.27 + 36 \times 0.02}{100}$ <p>($A_r =$) 32.09</p> <p>TE on transcription errors only (ie no TE on incorrect expression) Ignore units of amu / g / g mol⁻¹ Do not award any other unit</p> <p>32.09 scores (2) provided there is evidence of all four isotopes having been used in the calculation</p> <p>32.09 with no working scores (1) 32.10 with no working scores (0) 33.75 scores (0)</p>	2

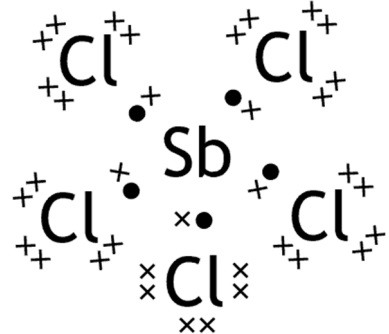

Question Number	Answer	Additional guidance	Mark
18(e)(i)	<ul style="list-style-type: none"> $\frac{256}{32} = 8$ (atoms) 	Allow working shown on mass spectrum Ignore calculations involving the Avogadro constant, even if incorrect Do not award just 8 (with no working)	1

Question Number	Answer	Additional guidance	Mark
18(e)(ii)	An answer that makes reference to the following points: <ul style="list-style-type: none"> (species containing) two sulfur atoms (1) (ion with) 1+ charge (1) 	Penalise isotopes other than ^{32}S once only eg S_2 / S—S Allow SS / S,S Ignore incorrect charge, including negative charge M2 dependent on an ion containing sulfur only S_2^+ / $[\text{S—S}]^+$ / SS^+ / S,S^+ scores (2) S_4^{2+} / $[\text{S}_2\text{—S}_2]^{2+}$ / $\text{S}_2\text{S}_2^{2+}$ / S_2^+S_2^+ / $\text{S}_2^+,\text{S}_2^+$ scores (1)	2

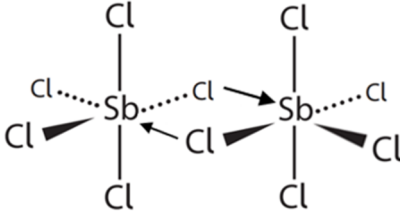

(Total for Question 18 = 14 marks)

Question Number	Answer	Additional guidance	Mark								
19(a)	<p>A completed table showing:</p> <ul style="list-style-type: none">correct number of bond pairs and lone pairs (1)correct Cl–N–Cl bond angle (1)correct name of shape (1)	<p>Mark all points independently</p> <table><tr><td>Number of bond pairs around N atom</td><td><u>3</u></td></tr><tr><td>Number of lone pairs around N atom</td><td><u>1</u></td></tr><tr><td>Cl–N–Cl bond angle</td><td><u>107^(o)</u> Allow 106^(o) – 108^(o)</td></tr><tr><td>Name of shape of molecule</td><td>(Trigonal) <u>pyramidal</u> Allow pyramid Ignore tetrahedral Do not award bipyramidal</td></tr></table>	Number of bond pairs around N atom	<u>3</u>	Number of lone pairs around N atom	<u>1</u>	Cl–N–Cl bond angle	<u>107^(o)</u> Allow 106 ^(o) – 108 ^(o)	Name of shape of molecule	(Trigonal) <u>pyramidal</u> Allow pyramid Ignore tetrahedral Do not award bipyramidal	3
Number of bond pairs around N atom	<u>3</u>										
Number of lone pairs around N atom	<u>1</u>										
Cl–N–Cl bond angle	<u>107^(o)</u> Allow 106 ^(o) – 108 ^(o)										
Name of shape of molecule	(Trigonal) <u>pyramidal</u> Allow pyramid Ignore tetrahedral Do not award bipyramidal										

Question Number	Answer	Additional guidance	Mark
19(b)(i)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> strong(er) (electrostatic) attraction between ions (in PCl_5) (than) weak intermolecular forces (in SbCl_5) 	<p>Mark M1 and M2 independently Ignore reference to solid/liquid</p> <p>(1) Allow strong ionic bonds / strong ionic lattice Allow strong attraction between positive and negative charges Allow strong attraction between cations and anions / PCl_4^+ and PCl_6^- Ignore just PCl_5 is (giant) ionic Do not award reference to PCl_5 molecules/ intermolecular forces Do not award reference to breaking of covalent bonds</p> <p>(1) Accept just London/van der Waals/dispersion/ temporary-induced dipole/instantaneous-induced dipole forces Ignore just SbCl_5 is (simple) molecular Do not award reference to breaking of covalent/ionic bonds</p> <p>Ionic bonding is stronger than intermolecular forces scores (2)</p>	2

Question Number	Answer	Additional guidance	Mark
19(b)(ii)	<p>Dot-and-cross diagram showing the following:</p> <ul style="list-style-type: none"> central Sb with five bond pairs and no lone pairs (1) five Cl atoms each with one bond pair and three lone pairs (1) 	<p>Mark M1 and M2 independently</p> <p>Example of dot-and-cross diagram:</p>  <p>TE on M1 for three or four Cl atoms</p> <p>Allow any combination of crosses and dots</p> <p>Allow circles to indicate outer shells</p> <p>Ignore inner shells</p> <p>Ignore lines showing the covalent bonds</p>	2

Question Number	Answer	Additional guidance	Mark
19(c)(i)	<ul style="list-style-type: none"> suitable description of a dative covalent bond 	<p>For credit to be awarded, it must be clear that:</p> <ul style="list-style-type: none"> i) a pair of / two electrons are involved ii) these electrons are shared/bonding iii) these electrons come from the same atom <p>eg shared electrons in which both electrons come from the same atom</p> <p>eg lone pair/full orbital from one atom overlaps with empty orbital of another</p> <p>Allow element for atom</p> <p>Allow just both electrons in the bond come from the same element</p> <p>Allow one element donates/gives/shares both electrons to the bond</p> <p>Allow one atom shares both electrons</p> <p>Do not award just one atom donates/gives both electrons (or any reference to ions being formed)</p> <p>Do not award ion/molecule/species for atom</p>	1

Question Number	Answer	Additional guidance	Mark
19(c)(ii)	<ul style="list-style-type: none"> two correct dative covalent bonds shown as arrows 	 <p>Ignore lone pairs shown on Cl Do not award dative bonds from any other Cl atoms</p>	1

Question Number	Answer	Additional guidance	Mark
19(d)	<p>An answer that makes reference to one of the following points:</p> <ul style="list-style-type: none"> no 2d orbitals or (nitrogen) cannot expand its octet (nitrogen is) too small (to bond to 5 atoms) repulsion between electron pairs would be too great 	<p>Accept reverse arguments</p> <p>Allow no d orbitals as only two (quantum) shells Allow no d orbitals (accessible) Allow (nitrogen) cannot have more than eight electrons in its outer shell Ignore just cannot expand its outer/valence shell Ignore just nitrogen obeys the octet rule</p> <p>Ignore just (nitrogen has a) very small/smallest atomic radius Ignore Cl atoms too large Ignore nitrogen has fewest/only two shells</p> <p>Ignore just repulsion between electron pairs Ignore repulsion between Cl atoms Ignore not enough room for 5 electron pairs</p>	1

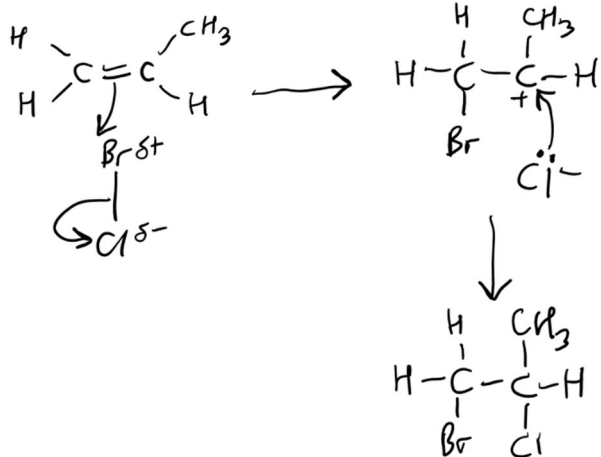

(Total for Question 19 = 10 marks)

Question Number	Answer	Additional guidance	Mark
20(a)	<ul style="list-style-type: none"> balanced equation with 1 mol C₃H₆ and correct products (1) state symbols (1) 	<p>Example of equation:</p> $\text{C}_3\text{H}_6(\text{g}) + 3\text{O}_2(\text{g}) \rightarrow \text{CO}_2(\text{g}) + \text{CO}(\text{g}) + \text{C}(\text{s}) + 3\text{H}_2\text{O}(\text{l})$ <p>Allow structural, displayed or skeletal formulae</p> <p>Allow H₂O(g) Do not award H₂O(aq)</p> <p>M2 dependent on correct species for the incomplete combustion of any C_nH_{2n} / C_nH_{2n+2} hydrocarbon forming CO₂(g), CO(g), C(s) and H₂O(l)/(g)</p> <p>If no other mark awarded, a correctly balanced equation, with correct state symbols, for the incomplete combustion of propene scores (1) eg C₃H₆(g) + 3O₂(g) → 3CO(g) + 3H₂O(l)/(g) eg 2C₃H₆(g) + 7O₂(g) → 2CO₂(g) + 4CO(g) + 6H₂O(l)/(g)</p>	2

Question Number	Answer	Additional guidance	Mark
20(b)	<ul style="list-style-type: none"> both solutions decolourise / turn colourless from purple with (potassium) manganate(VII)/$\text{KMnO}_4/\text{MnO}_4^-$ and from orange with (aqueous) bromine/Br_2 	<p>Ignore any reference to breaking of the C=C bond / type of reaction Ignore any reference to layers / effervescence Ignore any reference to reaction products / formation of solids</p> <p>(1) Ignore turn clear / change colour</p> <p>(1) Allow pink for purple or any combination of purple/pink</p> <p>(1) Allow yellow or brown for orange or any combination of orange/yellow/brown Do not award any mention of red (eg red-brown)</p> <p>If neither M1 nor M2 awarded, either of the following scores (1): (potassium) manganate(VII)/$\text{KMnO}_4/\text{MnO}_4^-$ decolourises from purple/pink or bromine decolourises from orange/yellow/brown</p>	2

Question Number	Answer	Additional guidance	Mark
20(c)	<ul style="list-style-type: none"> poly(propene) structure containing two repeat units with extension bonds 	<p>Example of diagram:</p> $ \begin{array}{cccc} \text{H} & \text{CH}_3 & \text{H} & \text{CH}_3 \\ & & & \\ \text{---C---} & \text{C---} & \text{C---} & \text{C---} \\ & & & \\ \text{H} & \text{H} & \text{H} & \text{H} \end{array} $ <p>Accept CH₃ groups on same or opposite sides</p> <p>Allow head-to-head and tail-to-tail configurations eg</p> $ \begin{array}{cccc} \text{CH}_3 & \text{H} & \text{H} & \text{CH}_3 \\ & & & \\ \text{---C---} & \text{C---} & \text{C---} & \text{C---} \\ & & & \\ \text{H} & \text{H} & \text{H} & \text{H} \end{array} $ <p>Allow displayed, structural, skeletal formulae or any combination of these</p> <p>Ignore connectivity of vertical C–CH₃ bond</p> <p>Ignore brackets and 'n'</p>	1

Question Number	Answer	Additional guidance	Mark
20(d)(i)	<ul style="list-style-type: none"> correct dipole 	<p>Example of correct diagram:</p> $\begin{array}{ccc} \delta+ & & \delta- \\ \text{Br} & \text{---} & \text{Cl} \end{array}$ <p>Allow correct indication of net dipole moment:</p> $\begin{array}{ccc} \text{+} & \text{---} & \text{+} \\ \text{Br} & \text{---} & \text{Cl} \end{array}$ <p>Ignore horizontal arrow from Br to Cl, on or above the bond</p> <p>Ignore bond pair electrons on diagram</p> <p>Ignore lone pairs on Br/Cl</p> <p>Ignore electron density map</p> <p>Ignore double-headed curly arrow from bond to Cl</p> <p>Do not award full charges</p>	1

Question Number	Answer	Additional guidance	Mark
20(d)(ii)	<p>A mechanism showing:</p> <ul style="list-style-type: none"> curly arrow from C=C bond to (δ^+)halogen and curly arrow from Br–Cl bond to (δ^-)halogen or just beyond (1) secondary carbocation (1) curly arrow from lone pair on halide ion to C⁽⁺⁾ and correct product (1) 	<p>Example of mechanism:</p>  <p>Allow displayed, structural, skeletal formulae or any combination of these</p> <p>Penalise incorrect propene structure once only</p> <p>Penalise half-headed curly arrows once only</p> <p>Allow primary carbocation for mechanism involving ethene only</p> <p>Allow curly arrow from lone pair to positive charge</p> <p>Do not award δ^- on halide ion</p>	3

Question Number	Answer	Additional guidance	Mark
20(e)	<p>A mechanism showing:</p> <ul style="list-style-type: none"> curly arrow from C=C bond to H⁺ (1) curly arrow from lone pair on water to C⁺ (1) correct structure for propan-2-ol and H⁺ (catalyst regenerated) (1) 	<p>Example of correct mechanism:</p> <p>Do not award any additional curly arrows from/to/on propene/H⁺</p> <p>Allow curly arrow from lone pair to positive charge Do not award any additional curly arrows shown in this step</p> <p>Allow any combination of displayed/structural/skeletal formulae Ignore atom connectivity except displayed C-H-O Ignore any additional curly arrows added to the central intermediate</p>	3

(Total for Question 20 = 12 marks)

Question Number	Answer	Additional guidance	Mark
21(a)	<p>Any two from the following:</p> <ul style="list-style-type: none"> chemically stable / inert / does not (easily) oxidise (1) colourless (1) odourless (1) non-toxic / non-irritant (1) hydrophobic / immiscible with water (1) hypoallergenic (1) 	<p>Ignore any reference to: carbon chain length intermolecular forces melting/boiling temperature flammability/volatility liquid/moisturising/softening/lubricating/hydrating spreads easily/absorbed easily natural/in human skin cheap</p> <p>Allow unreactive / not very reactive / long shelf life / durable / does not breakdown (easily) Ignore just stable</p> <p>Ignore transparent/clear</p> <p>Allow not harmful / non-hazardous / non-corrosive Ignore safe</p> <p>Allow insoluble Ignore oily</p>	2

Question Number	Answer	Additional guidance	Mark
21(b)	<ul style="list-style-type: none"> $\text{C}_{30}\text{H}_{62}$ 	Accept $\text{H}_{62}\text{C}_{30}$	1

Question Number	Answer	Additional guidance	Mark
21(c)(i)	<ul style="list-style-type: none"> nickel 	Accept palladium or platinum Allow correct symbol	1

Question Number	Answer	Additional guidance	Mark
21(c)(ii)	<ul style="list-style-type: none"> $0.00001 / (1 \times) 10^{-5} \text{ (g)}$ 	<p>Example of calculation:</p> $\text{mass} = \frac{50}{10^6} \times 0.2 = 0.00001 \text{ (g)}$ <p>Do not award incorrect unit</p> <p>Accept $10 \mu\text{g}$ / 0.01 mg</p> <p>Allow answer as fraction eg $\frac{1}{10^5} \text{ (g)}$</p> <p>Ignore SF</p> <p>Correct answer with no working scores (1)</p>	1

Question Number	Answer	Additional guidance	Mark
21(c)(iii)	<ul style="list-style-type: none"> conversion of temperature to K rearrangement of ideal gas equation evaluation to give moles of hydrogen evaluation of mole ratio <p>and</p> <p>number of C=C bonds per molecule of squalene</p>	<p>Example of calculation:</p> <p>(1) $T = 200 + 273 (= 473 \text{ K})$</p> <p>(1) $n = \frac{pV}{RT}$ or $n = \frac{4.0 \times 10^5 \times 500}{8.31 \times 473}$</p> <p>(1) $n(\text{H}_2) = 50882.429$ Ignore SF except 1 SF TE on temperature M3 dependent on correct use of ideal gas equation</p> <p>$n(\text{H}_2) : n(\text{squalene})$ 50882 : 8500 6 : 1</p> <p>(1) 6 (× C=C bonds per molecule) TE on $n(\text{H}_2)$ provided $n(\text{H}_2) >$ than 8500 and answer is rounded to nearest integer</p> <p>6 (× C=C bonds per molecule) with no working scores (1)</p> <p>2 (× C=C bonds per molecule) from use of $24 \text{ dm}^3 \text{ mol}^{-1}$ as molar gas volume scores (2)</p>	4

21(c)(iii) cont	<p>Alternative route to M2, M3 and M4</p> <ul style="list-style-type: none"> rearrangement of ideal gas equation (1) evaluation to give volume of squalene (1) evaluation of volume ratio <p>and</p> <p>number of C=C bonds per molecule of squalene (1)</p>	<p><u>Example of calculation:</u></p> $V = \frac{nRT}{p}$ <p>or</p> $V = \frac{8500 \times 8.31 \times 473}{4.0 \times 10^5}$ <p>$V(\text{squalene}) = 83.52589 \text{ (m}^3\text{)}$ Ignore SF except 1 SF TE on temperature M3 dependent on correct use of ideal gas equation</p> <p>$V(\text{H}_2) : V(\text{squalene})$ 500 : 83.52589 6 : 1</p> <p>6 (× C=C bonds per molecule) TE on $V(\text{squalene})$ provided $V(\text{squalene}) < 500 \text{ (m}^3\text{)}$ and answer is rounded to nearest integer</p>	
----------------------------------	---	---	--

Question Number	Answer	Additional guidance	Mark
21(c)(iv)	<ul style="list-style-type: none"> $\text{C}_{30}\text{H}_{50} + 6\text{H}_2 \rightarrow \text{C}_{30}\text{H}_{62}$ 	<p>Ignore state symbols</p> <p>TE on (c)(iii) for any $\text{C}_n\text{H}_{2n+2}$ product formula where $24 \leq n \leq 30$</p> <p>If the number of C=C bonds is not stated in (c)(iii) then award (1) for an equation of the form: $\text{C}_n\text{H}_{2n-2y+2} + y\text{H}_2 \rightarrow \text{C}_n\text{H}_{2n+2}$ Where $24 \leq n \leq 30$ and $1 \leq y \leq 14$</p>	1

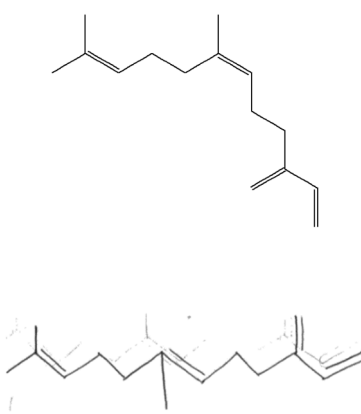

Question Number	Answer	Additional guidance	Mark
21(d)(i)	<ul style="list-style-type: none"> (fractional) distillation 	<p>Ignore solvent extraction</p> <p>Ignore filtration as part of the separation process</p> <p>Do not award just filtration</p> <p>Do not award chromatography</p>	1

Question Number	Answer	Additional guidance	Mark
21(d)(ii)	<ul style="list-style-type: none"> calculation of mass of squalene in 2.8 million dm³ or calculation of volume of squalene per shark (1) calculation of number of sharks required (1) 	<p>Example of calculation:</p> <p>mass = $2.8 \times 10^9 \times 0.86 = 2.408 \times 10^9$ (g) or volume = $\frac{300}{0.86} = 348.8372$ (cm³)</p> <p>$\frac{2.408 \times 10^9}{300} = 8.0267 \times 10^6 = 8026666.667 / 8.0 \times 10^6$ TE on mass or $\frac{2.8 \times 10^9}{348.8372} = 8.0267 \times 10^6 = 8026666.667 / 8.0 \times 10^6$ TE on volume</p> <p>Ignore SF Penalise incorrect rounding once only Correct answer with no working scores (2)</p>	2
