

Mark Scheme (Results)

October 2020

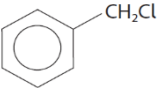

Pearson International Advanced Level
In Chemistry (WCH15)
Paper 1: Transition Metals and Organic Nitrogen
Chemistry

Section A

Question number	Answer	Mark
1	<p>The only correct answer is B (-210)</p> <p><i>A is incorrect because this is the stabilisation energy of benzene</i></p> <p><i>C is incorrect because this is the enthalpy change of hydrogenation for three C=C</i></p> <p><i>D is incorrect because this is 150 kJ mol⁻¹ less stable than three C=C</i></p>	(1)

Question number	Answer	Mark
2	<p>The only correct answer is A (p orbitals, π bond)</p> <p><i>B is incorrect because a σ bond is not present in the ring of delocalised electrons</i></p> <p><i>C is incorrect because s and p orbitals do not overlap to form the ring of delocalised electrons</i></p> <p><i>D is incorrect because s and p orbitals do not overlap and a σ bond is not formed in the ring of delocalised electrons</i></p>	(1)

Question number	Answer	Mark
3	<p>The only correct answer is C (ethanoyl chloride and aluminium chloride)</p> <p><i>A is incorrect because ethanal does not react with benzene</i></p> <p><i>B is incorrect because ethanal does not react with benzene</i></p> <p><i>D is incorrect because the catalyst is incorrect</i></p>	(1)

Question number	Answer	Mark
4	<p>The only correct answer is A</p> <div style="text-align: center;">  </div> <p><i>B is incorrect because chlorine does not substitute into the benzene ring in the presence of ultraviolet light</i></p> <p><i>C is incorrect because chlorine does not substitute into the benzene ring in the presence of ultraviolet light</i></p> <p><i>D is incorrect because chlorine does not substitute into the benzene ring in the presence of ultraviolet light</i></p>	(1)

Question number	Answer	Mark
5	<p>The only correct answer is C (6)</p> <p><i>A is incorrect because the NO₂ groups can be on carbon atoms (2,3), (2, 4), (2,5), (2, 6), (3, 4) and (3,5) relative to the OH group</i></p> <p><i>B is incorrect because the NO₂ groups can be on carbon atoms (2,3), (2, 4), (2,5), (2, 6), (3, 4) and (3,5) relative to the OH group</i></p> <p><i>D is incorrect because the NO₂ groups can be on carbon atoms (2,3), (2, 4), (2,5), (2, 6), (3, 4) and (3,5) relative to the OH group</i></p>	(1)

Question number	Answer	Mark
6	<p>The only correct answer is C (2.98 g)</p> <p><i>A is incorrect because the mass of phenyl ethanoate has been multiplied by 0.85 instead of divided by 0.85</i></p> <p><i>B is incorrect because this is the mass of phenol if the yield is 100% yield</i></p> <p><i>D is incorrect because this is the mass of phenyl ethanoate produced from 3.67 g of phenol</i></p>	(1)

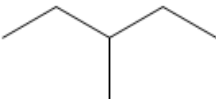

Question number	Answer	Mark
7	<p>The only correct answer is B (C_7H_8)</p> <p>A is incorrect because this contains 92.3% carbon</p> <p>C is incorrect because this contains 90.6% carbon</p> <p>D is incorrect because this contains 90.0% carbon</p>	(1)

Question number	Answer	Mark
8	<p>The only correct answer is D ($(C_2H_5)_2NH_2^+Cl^-$)</p> <p>A is incorrect because this compound would not be formed from ethylamine and chloroethane</p> <p>B is incorrect because this compound is formed when hydrochloric acid is added to ethylamine</p> <p>C is incorrect because this compound is formed when ethanoyl chloride is added the ethylamine</p>	(1)

Question number	Answer	Mark
9	<p>The only correct answer is D ($HOOC-C_6H_4-COOH$ and $HOCH_2CH_2OH$)</p> <p>A is incorrect because the dicarboxylic acid and the dialcohol are the wrong way around</p> <p>B is incorrect because the dicarboxylic acid and the dialcohol are the wrong way around and there are too many carbon atoms</p> <p>C is incorrect because each monomer must have the same two functional groups to form this polymer</p>	(1)

Question number	Answer	Mark
10	<p>The only correct answer is B (4)</p> <p>A is incorrect because the 1st and 6th amino acids are the same, the 2nd is different, the 3rd and 5th are the same and the 4th is different</p> <p>C is incorrect because the 1st and 6th amino acids are the same, the 2nd is different, the 3rd and 5th are the same and the 4th is different</p> <p>D is incorrect because the 1st and 6th amino acids are the same, the 2nd is different, the 3rd and 5th are the same and the 4th is different</p>	(1)

Question number	Answer	Mark
11	<p>The only correct answer is B (ethanal)</p> <p>A is incorrect because carbon dioxide produces a carboxylic acid</p> <p>C is incorrect because methanal produces a primary alcohol</p> <p>D is incorrect because propanone produces a tertiary alcohol</p>	(1)

Question number	Answer	Mark
12	<p>The only correct answer is B</p>  <p>A is incorrect because this isomer gives 3 peaks</p> <p>C is incorrect because this isomer gives 5 peaks</p> <p>D is incorrect because this isomer gives 2 peaks</p>	(1)

Question number	Answer	Mark
13	<p>The only correct answer is C ($C_{11}H_{14}O$)</p> <p><i>A is incorrect because there are 6 carbon atoms in the ring, 3 in the side-chain on the left and 2 in the side chain on the right</i></p> <p><i>B is incorrect because there are 6 carbon atoms in the ring, 3 in the side-chain on the left and 2 in the side chain on the right</i></p> <p><i>D is incorrect because there are no hydrogen atoms on the carbon atoms in the ring where there are side-chains</i></p>	(1)

Question number	Answer	Mark
14	<p>The only correct answer is A (N_2O_5)</p> <p><i>B is incorrect because Br has oxidation number +5 and Mn has oxidation number +7</i></p> <p><i>C is incorrect because Br has oxidation number +5 and Fe has oxidation number +6</i></p> <p><i>D is incorrect because Br has oxidation number +5 and S has oxidation number +4</i></p>	(1)

Question number	Answer	Mark
15	<p>The only correct answer is A ($Cr_2O_7^{2-} + 2C \rightarrow Cr_2O_3 + CO_3^{2-} + CO$)</p> <p><i>B is incorrect because chromium has oxidation number +6 in the reactant and product and no other atom is changing oxidation number</i></p> <p><i>C is incorrect because chromium has oxidation number +6 in the reactant and product and no other atom is changing oxidation number</i></p> <p><i>D is incorrect because chromium has oxidation number +6 in the reactant and product and no other atom is changing oxidation number</i></p>	(1)

Question number	Answer	Mark
16	<p>The only correct answer is C (+6)</p> <p>A is incorrect because the maximum oxidation state occurs when all the 3d and 4s electrons are used in bonding</p> <p>B is incorrect because the maximum oxidation state occurs when all the 3d and 4s electrons are used in bonding</p> <p>D is incorrect because the maximum oxidation state occurs when all the 3d and 4s electrons are used in bonding</p>	(1)

Question number	Answer	Mark
17	<p>The only correct answer is D (NH_4^+)</p> <p>A is incorrect because CH_3NH_2 has a lone pair of electrons that can form a dative covalent bond</p> <p>B is incorrect because CN^- has a lone pair of electrons that can form a dative covalent bond</p> <p>C is incorrect because NH_3 has a lone pair of electrons that can form a dative covalent bond</p>	(1)

Question number	Answer	Mark
18	<p>The only correct answer is D (coordination number 6, overall charge 4-)</p> <p>A is incorrect because the coordination number should be 6 as there are 6 dative covalent bonds and the ions are Ni^{2+}, two Cl^- and two $\text{C}_2\text{O}_4^{2-}$, giving an overall charge of 4-</p> <p>B is incorrect because the coordination number should be 6 as there are 6 dative covalent bonds and the ions are Ni^{2+}, two Cl^- and two $\text{C}_2\text{O}_4^{2-}$, giving an overall charge of 4-</p> <p>C is incorrect because the coordination number should be 6 as there are 6 dative covalent bonds and the ions are Ni^{2+}, two Cl^- and two $\text{C}_2\text{O}_4^{2-}$, giving an overall charge of 4-</p>	(1)

Question number	Answer	Mark
19	<p>The only correct answer is C (36.7 cm^3)</p> <p><i>A is incorrect because the ratio of oxidation numbers, 4:7, has been used and the mole ratios of $\text{MnO}_4^-:\text{Fe}^{2+}$ should be used</i></p> <p><i>B is incorrect because the mole ratio of 5:3 has been used the wrong way around</i></p> <p><i>D is incorrect because the ratio of 7:4 has been used and the mole ratios of $\text{MnO}_4^-:\text{Fe}^{2+}$ should be used</i></p>	(1)

Question number	Answer	Mark
20	<p>The only correct answer is C (0.15 mol dm^{-3})</p> <p><i>A is incorrect because this is the concentration with respect to $\text{Cr}_2(\text{SO}_4)_3$</i></p> <p><i>B is incorrect because this is the concentration with respect to chromium ions</i></p> <p><i>D is incorrect because this is the total concentration of all ions</i></p>	(1)

Total for Section A = 20 marks

Section B

Question number	Answer	Additional guidance	Mark
21(a)	<ul style="list-style-type: none"> • (A Salt bridge containing a solution of) potassium nitrate / KNO_3 (1) • (B Electrode made of) platinum / Pt (1) • (C Solution containing) iron(II) and iron(III) ions / Fe^{2+} and Fe^{3+} (ions) (1) 	<p>Ignore any conditions, including concentrations</p> <p>Allow potassium chloride / KCl / sodium nitrate / NaNO_3 / sodium chloride / NaCl Allow ammonium salts</p> <p>Do not award iron</p> <p>Allow soluble compounds of iron(II) and iron(III) e.g. chlorides, nitrates or sulfates Ignore acid</p>	(3)

Question number	Answer	Additional guidance	Mark
21(b)	<ul style="list-style-type: none"> half-equation for bismuthate ions (1) half-equation for manganate(VII) ions (1) overall equation (1) 	<p>Examples of equations: $\text{BiO}_3^- + 6\text{H}^+ + 2\text{e}^- \rightarrow \text{Bi}^{3+} + 3\text{H}_2\text{O}$ Allow half-equation written in reverse</p> <p>$\text{Mn}^{2+} + 4\text{H}_2\text{O} \rightarrow \text{MnO}_4^- + 8\text{H}^+ + 5\text{e}^-$ Allow -5e^- on left Allow half-equation written in reverse</p> <p>Stand alone mark $2\text{Mn}^{2+} + 5\text{BiO}_3^- + 14\text{H}^+ \rightarrow 2\text{MnO}_4^- + 5\text{Bi}^{3+} + 7\text{H}_2\text{O}$ Overall equation must be written in direction shown Allow multiples Do not award uncanceled electrons / H^+ / H_2O</p> <p>Allow \rightleftharpoons in equations</p> <p>Ignore state symbols even if incorrect</p>	(3)

Question number	Answer	Additional guidance	Mark
21(c)	<ul style="list-style-type: none"> substitution of values into formula (1) calculation of E (1) 	<p>Example of calculation: $E = -0.74 + \frac{8.31 \times 298}{96500 \times 3} \times \ln 0.0100$</p> <p>$E = -0.77939 / -0.7794 / -0.779 / -0.78 \text{ (V)}$</p> <p>TE on incorrect numbers in correct formula e.g. if $[\text{Cr}^{3+}] = 0.100$, $E = -0.76 \text{ (V)}$</p> <p>No TE on incorrect formula</p> <p>Ignore SF except 1 SF</p> <p>Ignore units, even if incorrect Correct answer with no working scores (2)</p>	(2)

(Total for Question 21 = 8 marks)

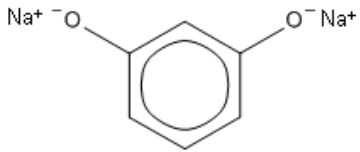

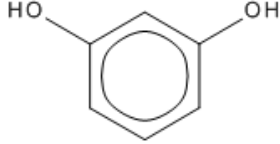

Question number	Answer	Additional guidance	Mark
22(a)(i)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> the curly arrow should go (from the benzene ring/ π bond / delocalised electrons / inside the hexagon and) towards the nitrogen / NO_2^+ (1) the open end of the 'horseshoe' should be pointing towards the tetrahedral carbon / carbon with 4 bonds (1) the curly arrow should start from the (C-H) bond (1) 	<p>Allow the changes in any order Allow the changes shown in diagrams / amended diagrams in the question Penalise any additional incorrect changes</p> <p>Allow first arrow must be reversed Ignore just 'the curly arrow is incorrect'</p> <p>Ignore just 'the curly arrow should not start from the hydrogen atom' / 'the curly arrow is incorrect' Ignore use of ion / molecule for hydrogen atom</p>	(3)

Question number	Answer	Additional guidance	Mark
22(a)(ii)	<ul style="list-style-type: none"> tin and (concentrated) hydrochloric acid / (concentrated) $\text{HCl}(\text{aq})$ 	<p>Allow just 'HCl' for hydrochloric acid</p> <p>Allow iron and (concentrated) hydrochloric acid / (concentrated) $\text{HCl}(\text{aq})$</p> <p>Ignore addition of sodium hydroxide / NaOH / alkali added after the acid</p> <p>Ignore mention of heat / catalyst</p> <p>Do not award dilute acid / sulfuric acid / nitric acid</p>	(1)

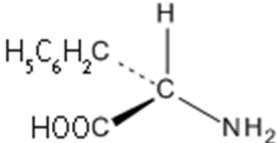

Question Number	Answer	Additional guidance	Mark
22(b)(i)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> the lone pair (of electrons) on the nitrogen atom (1) overlaps with π cloud / delocalised electrons / delocalised system or interacts with (benzene) ring / delocalised electrons / delocalised system (1) so the nitrogen atom is less able to accept a hydrogen ion / H^+ / proton (1) 	<p>Allow pair of electrons for lone pair Allow lone pair on the amine / NH_2 group</p> <p>Allow increases the electron density in the (benzene) ring / feeds into the delocalised electrons or decreases the electron density on the nitrogen atom</p> <p>Allow the lone pair (of electrons) is less available to accept a hydrogen ion / H^+ / proton Allow nitrogen is less able to donate electrons to a hydrogen ion / H^+ / proton Allow lone pair is less available to form a dative bond with an acid Allow phenylamine for nitrogen Allow ammonia is more able to accept a hydrogen ion / H^+ / proton</p>	(3)

Question Number	Answer	Additional guidance	Mark
22(b)(ii)	<p>A description that makes reference to the following point:</p> <ul style="list-style-type: none"> a (pale) blue precipitate forms 	<p>Allow any shade of blue</p> <p>Ignore reference to precipitate dissolving</p> <p>Ignore original colour of solution</p> <p>Do not award any other colours with blue e.g. blue-green</p>	(1)

Question number	Answer	Additional guidance	Mark
22(c)(i)	<ul style="list-style-type: none"> sodium nitrite / sodium nitrate(III) / NaNO_2 and hydrochloric acid / HCl at 5°C / between 0 and 10°C 	<p>Allow nitrous acid / HNO_2 / HONO and hydrochloric acid / HCl</p> <p>Ignore concentration of acid</p> <p>Do not award sodium nitrate / NaNO_3 / nitric (V) acid / HNO_3</p> <p>Stand alone mark</p> <p>Allow any temperature or range of temperatures within the range 0 and 10°C / less than any temperature within that range</p> <p>Allow ice-bath</p>	(2)

Question number	Answer	Additional guidance	Mark
22(c)(ii)	<ul style="list-style-type: none"> correct structure 	<p><u>Examples of structure:</u></p>  <p>or</p>  <p>Allow ONa with no charges</p> <p>Allow O⁻</p> <p>Do not award bond between O and Na i.e. O-Na / OH-C / additional atoms bonded to benzene</p>	(1)

Question number	Answer	Additional guidance	Mark
22(c)(iii)	<ul style="list-style-type: none"> there is restricted rotation around N=N / the nitrogen bridge / the azo bridge / nitrogen π bond (and the lone pair of electrons on nitrogen) 	<p>Allow no rotation around N=N / the double bond Ignore just 'two different groups on N atoms'</p> <p>Do not award the molecule does not rotate Do not award restricted / no rotation around C=C</p>	(1)

Question number	Answer	Additional guidance	Mark
22(d)	<ul style="list-style-type: none"> other optical isomer 	<p>Example of optical isomer:</p>  <p>The groups must be joined in the correct bonds around the central carbon atom but ignore the connectivity of the groups</p> <p>Allow the mirror images of the symbols</p> <p>Allow subscripts the other side of the symbols e.g. ${}^5\text{H}_6\text{C}_2\text{HC}$</p>	(1)

(Total for Question 22 = 13 marks)

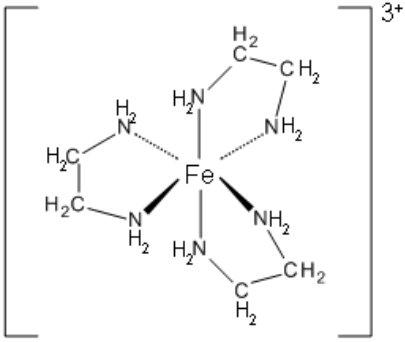

Question number	Answer	Additional guidance	Mark
23(a)	<ul style="list-style-type: none"> expression for volume of oxygen reacting with CH₄ (1) expression for volume of oxygen reacting with C₂H₆ (1) calculation of volume of methane (1) calculation of percentage of methane in mixture (1) 	<p>Example of calculation: Let x cm³ be the volume of methane $\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$ x cm³ of CH₄ reacts with 2x cm³ of O₂</p> <p>$\text{C}_2\text{H}_6 + 3\frac{1}{2}\text{O}_2 \rightarrow 2\text{CO}_2 + 3\text{H}_2\text{O}$ (25 - x) cm³ C₂H₆ reacts with $3\frac{1}{2}(25 - x)$ cm³ O₂</p> <p>$2x + 3\frac{1}{2}(25 - x) = 65$ x = 15 cm³</p> <p>$\frac{15}{25} \times 100 = 60\%$ TE on volume of methane Correct answer with no working scores (4) Ignore SF Allow alternative methods e.g. 1 ratio CH₄ : O₂ = 1 : 2 (1) / $\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$ ratio C₂H₆ : O₂ = 1 : 3.5 / 2 : 7 (1) / $\text{C}_2\text{H}_6 + 3\frac{1}{2}\text{O}_2 \rightarrow 2\text{CO}_2 + 3\text{H}_2\text{O}$ (n = fraction of CH₄) $2n + 3.5(1 - n) = \frac{65}{25} / 2.6$ (1) n = $\frac{0.9}{15} / 0.6$ so 60% methane (1) e.g. 2 mol (CH₄ + C₂H₆) = $\frac{25}{24000} = 0.0010412 / 1.0412 \times 10^{-3}$ (1) mol O₂ = $\frac{65}{24000} = 0.0027083 / 2.7083 \times 10^{-3}$ (1) ratio mol (CH₄ + C₂H₆) : mol O₂ = 1 : 2.6 (1) so 60% methane (1)</p>	(4)

Question number	Answer	Additional guidance	Mark
23(b)	<p>Step 1</p> <ul style="list-style-type: none"> potassium dichromate(VI) and dilute sulfuric acid / acidified (potassium) dichromate(VI) (and heat) (1) equation (1) <p>Step 2</p> <ul style="list-style-type: none"> hydrogen cyanide and potassium cyanide / cyanide ions or potassium cyanide and (sulfuric) acid / hydrogen ions or potassium cyanide and pH 8-10 / alkali (1) equation (1) <p>Step 3</p> <ul style="list-style-type: none"> lithium tetrahydridoaluminate(III) / lithium aluminium hydride and dry ether / ethoxyethane (followed by a dilute acid) or hydrogen and nickel / platinum / palladium or sodium and ethanol (1) equation (1) 	<p>Allow correct formulae for all reagents Allow any combination of structural and displayed formulae in equations or skeletal formulae</p> <p>Example of equation for Step 1:</p> $ \begin{array}{c} \text{H} & \text{H} & \text{OH} & \text{H} \\ & & & \\ \text{H}-\text{C}- & \text{C}- & \text{C}- & \text{C}-\text{H} \\ & & & \\ \text{H} & \text{H} & \text{H} & \text{H} \end{array} + [\text{O}] \longrightarrow \begin{array}{c} \text{H} & \text{H} & \text{O} & \text{H} \\ & & & \\ \text{H}-\text{C}- & \text{C}- & \text{C}- & \text{C}-\text{H} \\ & & & \\ \text{H} & \text{H} & & \text{H} \end{array} + \text{H}_2\text{O} $ <p>Ignore missing H₂O from equation</p> <p>Reagents for Step 2 conditional on a carbonyl compound</p> <p>Example of equation for Step 2:</p> $ \begin{array}{c} \text{H} & \text{H} & \text{O} & \text{H} \\ & & & \\ \text{H}-\text{C}- & \text{C}- & \text{C}- & \text{C}-\text{H} \\ & & & \\ \text{H} & \text{H} & & \text{H} \end{array} + \text{HCN} \longrightarrow \begin{array}{c} \text{H} & \text{H} & \text{OH} & \text{H} \\ & & & \\ \text{H}-\text{C}- & \text{C}- & \text{C}- & \text{C}-\text{H} \\ & & \text{CN} & \\ \text{H} & \text{H} & & \text{H} \end{array} $ <p>Reagents for Step 3 conditional on a nitrile</p> <p>Example of equation for Step 3:</p> $ \begin{array}{c} \text{H} & \text{H} & \text{OH} & \text{H} \\ & & & \\ \text{H}-\text{C}- & \text{C}- & \text{C}- & \text{C}-\text{H} \\ & & \text{CN} & \\ \text{H} & \text{H} & & \text{H} \end{array} + 4[\text{H}] \longrightarrow \begin{array}{c} \text{H} & \text{H} & \text{OH} & \text{H} \\ & & & \\ \text{H}-\text{C}- & \text{C}- & \text{C}- & \text{C}-\text{H} \\ & & \text{CH}_2 & \\ & & & \\ & & \text{NH}_2 & \end{array} $ <p>Allow other correct balanced equations / 4[H] on arrow</p>	(6)

(Total for Question 23 = 10 marks)

Question number	Answer	Additional guidance	Mark
24(a)(i)	<ul style="list-style-type: none"> correct formula of iron(III) hydroxide (1) rest of equation correct, conditional on correct precipitate (1) 	<p>Examples of equation:</p> $[\text{Fe}(\text{H}_2\text{O})_6]^{3+} + 3\text{NH}_3 \rightarrow \text{Fe}(\text{OH})_3 + 3\text{H}_2\text{O} + 3\text{NH}_4^+$ <p>or</p> $[\text{Fe}(\text{H}_2\text{O})_6]^{3+} + 3\text{NH}_3 \rightarrow \text{Fe}(\text{OH})_3(\text{H}_2\text{O})_3 + 3\text{NH}_4^+$ <p>Allow $\text{Fe}(\text{H}_2\text{O})_3(\text{OH})_3$</p> <p>Ignore state symbols, even if incorrect</p> <p>Ignore square brackets around iron(III) hydroxide formulae</p>	(2)

Question number	Answer	Additional guidance	Mark
24(a)(ii)	<ul style="list-style-type: none"> ligand exchange / ligand substitution / ligand displacement 	<p>Allow ligand replacement</p> <p>Do not award ligand change / change in co-ordination number / redox / deprotonation in addition to correct answer</p>	(1)

Question number	Answer	Additional guidance	Mark
24(a)(iii)	<ul style="list-style-type: none"> 6 bonds between N in diamines and Fe rest of diagram correct 	<p>Example of diagram:</p>  <p>(1) Allow NH₂- Fe on left of structure</p> <p>(1) Conditional on 6 N-Fe bonds</p> <p>Allow C₂H for CH₂, H₂N for NH₂ etc Allow displayed / skeletal formulae for ligands</p> <p>Ignore bond lengths and bond angles</p> <p>Ignore missing brackets and charge / 3+ on Fe</p> <p>Ignore lone pairs on N / arrows added to bonds unless pointing towards the nitrogen atoms</p> <p>Do not award two nitrogens from the molecule bonded at 180° to Fe ion</p>	(2)

Question number	Answer	Additional guidance	Mark								
24(b)(i)	<ul style="list-style-type: none">any 2 coloursthird colour	<p>(1)</p> <p>(1)</p> <p>Example of table:</p> <table><tr><th>Oxidation state of vanadium</th><th>Colour of aqueous solution</th></tr><tr><td>+3</td><td>green</td></tr><tr><td>+4</td><td>blue</td></tr><tr><td>+5</td><td>yellow or colourless</td></tr></table> <p>Ignore any further description of colour e.g. pale yellow</p> <p>Do not award combined colours e.g. blue/green</p>	Oxidation state of vanadium	Colour of aqueous solution	+3	green	+4	blue	+5	yellow or colourless	(2)
Oxidation state of vanadium	Colour of aqueous solution										
+3	green										
+4	blue										
+5	yellow or colourless										

Question number	Answer	Additional guidance	Mark
24(b)(ii)	<ul style="list-style-type: none"> it is not a redox reaction because the oxidation number of vanadium is (+)5 in both species 	<p>Allow the oxidation number of vanadium remains the same if one oxidation number given - this may be shown by the equation</p> <p>Ignore 'there are no electrons in the equation'</p> <p>Ignore just 'the oxidation number of vanadium does not change'</p> <p>Do not award reference to any atom oxidised or reduced</p> <p>Do not award vanadium oxidation number is (+)5 in both species so it is a redox reaction</p>	(1)

Question number	Answer	Additional guidance	Mark
24(b)(iii)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> equation for oxidation of V^{2+} to V^{3+} (1) E^\ominus_{cell} for oxidation of V^{2+} to V^{3+} (1) equation for oxidation of V^{3+} to VO^{2+} (1) E^\ominus_{cell} for oxidation of V^{3+} to VO^{2+} (1) VO^{2+} is not oxidised to VO_2^+ / any further as E^\ominus_{cell} is -0.2 (V) / negative (1) 	<p>Examples of equations: Allow multiples Ignore state symbols even if incorrect Ignore uncanceled H^+ / H_2O Penalise uncanceled electrons once only</p> <p>$NO_3^- + 2H^+ + V^{2+} \rightarrow NO_2 + H_2O + V^{3+}$ Allow $Cu^{2+} + V^{2+} \rightarrow Cu^+ + V^{3+}$ Allow $\frac{1}{2}Br_2 + V^{2+} \rightarrow Br^- + V^{3+}$</p> <p>$E^\ominus_{\text{cell}} = (+)1.06$ (V) TE on Cu^{2+} / Br_2 chosen as oxidising agent With Cu^{2+} $E^\ominus_{\text{cell}} = (+)0.41(0)$ (V) With Br_2 $E^\ominus_{\text{cell}} = (+)1.35$ (V)</p> <p>$NO_3^- + V^{3+} \rightarrow NO_2 + VO^{2+}$ Allow $\frac{1}{2}Br_2 + V^{3+} + H_2O \rightarrow Br^- + VO^{2+} + 2H^+$</p> <p>$E^\ominus_{\text{cell}} = (+)0.46$ (V) With Br_2 $E^\ominus_{\text{cell}} = (+)0.75$ (V)</p> <p>Allow this shown in an equation</p>	(5)

Question number	Answer	Additional guidance	Mark												
*24(c)	<p>This question assesses the student’s ability to show a coherent and logically structured answer with linkages and fully sustained reasoning.</p> <p>Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning.</p> <p>The following table shows how the marks should be awarded for indicative content.</p> <table><tr><th>Number of indicative marking points seen in answer</th><th>Number of marks awarded for indicative marking points</th></tr><tr><td>6</td><td>4</td></tr><tr><td>5-4</td><td>3</td></tr><tr><td>3-2</td><td>2</td></tr><tr><td>1</td><td>1</td></tr><tr><td>0</td><td>0</td></tr></table>	Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points	6	4	5-4	3	3-2	2	1	1	0	0	<p>Guidance on how the mark scheme should be applied.</p> <p>The mark for indicative content should be added to the mark for lines of reasoning. For example, a response with five indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning).</p> <p>If there were no linkages between the points, then the same indicative marking points would yield an overall score of 3 marks (3 marks for indicative content and no marks for linkages).</p> <p>In general it would be expected that 5 or 6 indicative points would get 2 reasoning marks, and</p>	(6)
Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points														
6	4														
5-4	3														
3-2	2														
1	1														
0	0														

	<p>The following table shows how the marks should be awarded for structure and lines of reasoning</p> <table><tr><td></td><td>Number of marks awarded for structure of answer and sustained lines of reasoning</td></tr><tr><td>Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughout</td><td>2</td></tr><tr><td>Answer is partially structured with some linkages and lines of reasoning</td><td>1</td></tr><tr><td>Answer has no linkages between points and is unstructured</td><td>0</td></tr></table> <p>Comment: Look for the indicative marking points first, then consider the mark for the structure of the answer and sustained line of reasoning.</p> <p>Indicative content</p>		Number of marks awarded for structure of answer and sustained lines of reasoning	Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughout	2	Answer is partially structured with some linkages and lines of reasoning	1	Answer has no linkages between points and is unstructured	0	<p>3 or 4 indicative points would get 1 mark for reasoning, and 0, 1 or 2 indicative points would score zero marks for reasoning.</p> <p>If there is any incorrect chemistry, deduct mark(s) from the reasoning. If no reasoning mark(s) awarded do not deduct mark(s). e.g. iron catalysing formation of ammonia from nitrogen and hydrogen but naming it the Contact Process / incorrect formula e.g. for persulfate ions</p> <p>Allow correct formulae for names</p> <p>Do not award examples that are not transition metals, ions or compounds</p>	
	Number of marks awarded for structure of answer and sustained lines of reasoning										
Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughout	2										
Answer is partially structured with some linkages and lines of reasoning	1										
Answer has no linkages between points and is unstructured	0										

	<ul style="list-style-type: none"> • IP1 Comparison - Activation energy both catalysts increase the rate of reaction by providing an alternative route / mechanism with a lower activation energy • IP2 Phase a heterogeneous catalyst is in a different phase from the reactants and a homogeneous catalyst is in the same phase as the reactants / all solutions / gases • IP3 Example of heterogeneous example of a heterogeneous catalyst and reaction it catalyses e.g. iron and Haber Process, nickel and hydrogenation of alkenes, platinum in a catalytic converter / with CO and NO • IP4 Example of homogeneous example of a homogeneous catalyst and reaction it catalyses e.g. iron(II) / iron(III) ions and reaction between iodide ions and persulfate ions • IP5 Mechanism of heterogeneous reactant molecules are adsorbed onto the catalyst surface, the bonds are weakened, reaction takes place then the product molecules are desorbed • IP6 Mechanism of homogeneous the transition metal ion is oxidised / reduced to a different oxidation state then changes back to the original oxidation state 	<p>Allow this shown on a Maxwell-Boltzmann distribution / reaction profile diagram</p> <p>Allow (physical) state for phase Allow heterogeneous catalysts are easy to separate from the reaction mixture / reactants / products and homogeneous catalysts are difficult to separate from the reaction mixture / reactants / products</p> <p>Allow e.g. reactant molecules bind to active sites for adsorbed / particles react for bonds weakened / product molecules leave for desorbed Allow vanadium(V) oxide reduced to vanadium(IV) and oxidised back to vanadium(V) for the Contact Process</p> <p>Allow this shown in equations, even if unbalanced Allow donate / receive electrons for oxidised / reduced</p>
