Question Number	Scheme	Notes	Marks
9(c)	$x^2 + 9(2x + c)^2 = 9$ or $\frac{x^2}{9} + (2x + c)^2 = 1$	Substitutes line into the ellipse equation. Condone slips provided intention clear.	M1
	$37x^2 + 36cx + 9c^2 - 9 = 0$ or e.g., $\frac{37}{9}x^2 + 4cx + c^2 - 1 = 0$	Correct quadratic with x^2 terms collected (could be implied)	A1
	$\frac{1}{2} (\text{sum of roots}) \Rightarrow (x =) \frac{-18c}{37}$ <p style="text-align: center;">or</p> $(x =) \frac{1}{2} \left(\frac{-36c + \sqrt{(36c)^2 - 4(37)(9c^2 - 9)}}{2(37)} + \frac{-36c - \sqrt{(36c)^2 - 4(37)(9c^2 - 9)}}{2(37)} \right)$ <p>M1: Correct attempt at $\frac{1}{2}$ (sum of roots), i.e., $-\frac{b}{2a}$ for their quadratic. Ignore how the expression is labelled. Requires previous M mark. A1: Any correct equation in x and c Allow this mark if e.g., x is seen as M_x</p>		dM1 A1
	$\Rightarrow c = "-\frac{37}{18}"x \Rightarrow y = 2x + \left("-\frac{37}{18}" \right)x$ <p>or $x = "-\frac{18}{37}"c \Rightarrow y = 2 \times "-\frac{18}{37}"c + c \Rightarrow \dots \left(y = \frac{c}{37} \Rightarrow \frac{y}{x} = -\frac{1}{18} \right)$</p>	Substitutes their $c = px$ into the line to obtain an equation in x and y only. Allow e.g., x_M and y_M and condone e.g., suffixes of P & Q This may also be achieved by e.g., finding y in terms of c and then eliminating c with their equation in x and c Must not be using " M_x " or " M_y " etc. but imply this mark from a locus equation in x and y or x_{\dots} and y_{\dots} with appropriate suffixes Requires both previous M marks	ddM1
	$\Rightarrow y_{\dots} = -\frac{1}{18}x_{\dots} \text{ oe}$ <p>$\therefore l$ passes through the origin oe *</p>	Obtains correct equation for locus (accept equivalents) and makes conclusion e.g., "passes/goes through origin/ $O/(0,0)$ " but allow "shown"/"as required"/"QED" etc. Requires all previous marks.
