

# Mark Scheme (Results)

January 2024

Pearson Edexcel International Advanced  
Level In Physics (WPH16)  
Paper 01: Practical Skills in Physics II

Question Number	Answer	Mark
1(a)	Use a (timing) marker (at the centre of the oscillation) (1) Allow the oscillations to settle before timing (1) Measure multiple oscillations <b>and</b> divide by the number of oscillations <b>Or</b> Repeat the measurement (of $T$ ) <b>and</b> calculate a mean (1)	3
1(b)(i)	$f_0$ in range 1.50 Hz to 1.54 Hz 3 s.f. only (1)	1
1(b)(ii)	Use of $T = \frac{1}{f_0}$ (1) Use of $T = 2\pi\sqrt{\frac{m}{k}}$ (1) Correct mass given to 2 or 3 s.f. with unit e.c.f. 1(b)(i) (1)	3
	<u>Example of calculation</u> $T = \frac{1}{1.52 \text{ Hz}} = 0.658 \text{ s}$ $m = \frac{kT^2}{4\pi^2} = \frac{30\text{Nm}^{-1} \times (0.658\text{s})^2}{4\pi^2} = 0.329 \text{ kg}$	
1(b)(iii)	There are not enough readings around the maximum value <b>Or</b> There are not enough readings between 1.4 Hz and 1.6 Hz (1)  Therefore the best fit line is uncertain <b>Or</b> The position of the peak (of the graph) is uncertain (1)	2
1(c)	Data loggers have a high sampling rate (1) So there is less uncertainty in the measurement of amplitude (at each frequency) (1)	2
	<b>Total for question 1</b>	<b>11</b>

Question Number	Answer	Mark
2(a)	<p><b>EITHER</b></p> <p>The hot plate <b>or</b> glass beaker will be hot  <b>Or</b> the hot plate <b>or</b> glass beaker will cause burns (if touched)  <b>Or</b> hot water may spill onto student (1)</p> <p>Use tongs or insulated gloves (to move the beaker) (1)</p> <p><b>OR</b></p> <p>The hot plate will be hot  <b>Or</b> the hot plate will cause burns (if touched) (1)</p> <p>So turn off the hot plate (when water has boiled) (1)</p> <p><b>OR</b></p> <p>Thermometer may break (when moving beaker) (1)  So remove the thermometer (before moving the beaker) (1)</p>	2
2(b)	<ol style="list-style-type: none"> <li>1. Use a stopwatch (to measure time) (1)</li> <li>2. Record the initial temperature and start the stopwatch (simultaneously) (1)</li> <li>3. Stir the water (before measuring the temperature) (1)</li> <li>4. Record the temperature at (regular) time intervals  <b>Or</b> Record the time at (regular) temperature intervals (1)</li> <li>5. Record many temperature readings (as the water cools)  <b>Or</b> Keep recording until temperature similar to temperature of the surroundings (1)</li> <li>6. Plot a graph of <math>\ln \theta</math> against <math>t</math> to check it is a straight line  <b>Or</b> plot a graph of <math>\ln \theta</math> against <math>t</math> to check the gradient is constant (1)</li> </ol>	6
<b>Total for question 2</b>		<b>8</b>

Question Number	Answer	Mark
3(a)	<p>Record position of top of lower magnet and bottom of upper magnet <b>and</b> subtract to give <math>x</math> (1)</p> <p>Any <b>TWO</b> from:            Ensure the ruler is close to the bar magnets (1)</p> <p>Read perpendicular to the scale  <b>Or</b> measure the position of the bar magnets using a set square (1)</p> <p>Clamp the (30 cm) ruler in position <b>and</b> use a set square to ensure the (30 cm) ruler is vertical (1)</p>	3
3(b)	<p><b>EITHER</b></p> <p><math>\log F = \log k + p \log x</math> (1)</p> <p>Compares with <math>y = c + mx</math> where <math>p</math> is the gradient (which is constant) (1)</p> <p>MP2 dependent on MP1</p> <p><b>OR</b></p> <p><math>\log F = p \log x + \log k</math> (1)</p> <p>Compares with <math>y = mx + c</math> where <math>p</math> is the gradient (which is constant) (1)</p> <p>MP2 dependent on MP1</p>	2
3(c)(i)	<p>Values of <math>\log x</math> correct and consistent to 2 d.p. Accept consistent to 3 d.p. (1)</p> <p>Values of <math>\log F</math> correct and consistent to 2 d.p. Accept consistent to 3 d.p. (1)</p> <p>Axes labelled: <math>y</math> as <math>\log (F / \text{mN})</math> and <math>x</math> as <math>\log (x / \text{mm})</math> (1)</p> <p>Sensible scales chosen (1)</p> <p><math>\log</math> values plotted accurately (1)</p> <p>Best fit line drawn (1)</p> <p>Accept <math>\ln</math> values</p>	6

$x / \text{mm}$	$F / \text{mN}$	$\log (x / \text{mm})$	$\log (F / \text{mN})$
102	11.22	2.01	1.05
117	7.56	2.07	0.88
128	5.25	2.11	0.72
145	3.43	2.16	0.54
166	2.09	2.22	0.32
197	1.18	2.29	0.07

3(c)(ii)	<p>Calculation of gradient using large triangle shown (1)</p> <p>Value of gradient in range (–)3.40 to (–)3.80 (1)</p> <p>Value of calculated gradient given to 2 or 3 s.f., negative, no unit (1)</p> <p><u>Example of calculation</u></p> $\text{gradient} = \frac{1 - 0.2}{2.03 - 2.255} = \frac{0.8}{-0.225} = -3.6$	3
3(c)(iii)	<p>States form of inverse square relationship as <math>F \propto x^{-2}</math> (1)</p> <p>States gradient (<math>p</math> of <math>\log F</math> against <math>\log x</math> for inverse square law) should be <math>-2</math> <b>and</b> states calculated gradient <math>p</math></p> <p><b>Or</b></p> <p>States relationship from graph <math>F \propto x^p</math> with <math>p</math> as calculated gradient (1)</p> <p>States valid conclusion (1)</p> <p>MP3 dependent on MP1 and MP2</p>	3
	<b>Total for question 3</b>	<b>17</b>

Question Number	Answer	Mark
4(a)(i)	<p><b>EITHER</b></p> <p>Repeat at different orientations and calculate a mean (1)</p> <p>To reduce (the effect of) <u>random errors</u> (1)</p> <p>MP2 dependent on MP1</p> <p><b>OR</b></p> <p>Check and correct for zero error on the calipers (1)</p> <p>To eliminate <u>systematic error</u> (1)</p> <p>MP2 dependent on MP1</p>	2
4(a)(ii)	<p>Calculation of %U shown using half resolution (1)</p> <p>States instrument based on justification using calculation of %U from corresponding resolution (1)</p> <p><u>Example of calculation</u></p> $\%U = \frac{0.005\text{mm}}{5\text{mm}} \times 100 = 0.1\%$ <p>So use a micrometer screw gauge as the %U is small</p>	2
