

# Mark Scheme (Results)

January 2022

Pearson International Advanced  
Subsidiary Level  
In Chemistry (WCH13)  
Paper 01: Practical Skills in Chemistry I

Question Number	Answer	Additional guidance	Mark
1(a)(i)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>white precipitate</li> </ul>	<p>Allow solid / ppt(e) / crystals for solid</p> <p>Ignore just white</p> <p>Ignore any references to colourless solutions</p> <p>Do not award any mention of cream, eg creamy-white</p> <p>Do not award colourless precipitate</p> <p>Do not award any reference to bubbles / effervescence</p> <p>Do not award any reference to fumes / smoke</p>	(1)

Question Number	Answer	Additional guidance	Mark
1(a)(ii)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>(add aqueous) sodium hydroxide / NaOH <b>and</b> warm (1)</li> <li>(gas evolved) turns (damp red) litmus (paper) blue</li> <li><b>or</b> (gives) white smoke with hydrogen chloride / HCl (1)</li> </ul>	<p>Allow heat</p> <p><b>M2 dependent on hydroxide as test reagent</b></p> <p>Allow turns universal indicator (paper) blue</p> <p>Do not award if indicator (paper) added to solution</p> <p>Allow white smoke with concentrated hydrochloric acid</p> <p>Ignore white / steamy fumes for white smoke</p> <p>Allow pungent / choking smell (as description of ammonia)</p> <p>Ignore just forms ammonia / NH<sub>3</sub></p> <p>Ignore any reference to effervescence / fizzing</p> <p>Do not award any reference to formation of a precipitate</p>	(2)

Question Number	Answer	Additional guidance	Mark
1(b)(i)	<p>An answer which that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• so that the ammonium chloride / solid dissolves (1)</li> <li>• to ensure a uniform temperature (1)</li> </ul>	<p>Allow any reference to helping the solid dissolve</p> <p>Ignore any reference to mixing</p> <p>Ignore any reference to reaction / reactants</p> <p>Allow to ensure a constant temperature</p> <p>Allow to give an accurate temperature reading</p> <p>Allow (so solution is) evenly cooled / heated</p>	(2)

Question Number	Answer	Additional guidance	Mark
1(b)(ii)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>(data <math>\geq 90</math> s extrapolated back and) minimum temperature at <math>t = 0</math></li> <li>calculation showing maximum temperature change, <math>\Delta T</math></li> </ul>	<p>Example of extrapolation and calculation:</p> <p>(1) Accept minimum temperature in range of <math>10.7 \pm 0.2</math> (<math>^{\circ}\text{C}</math>)</p> <p>(1) <math>\Delta T = 19.7 - \text{minimum temperature} = 19.7 - 10.7 = 9.0</math> (<math>^{\circ}\text{C}</math>)  TE on <math>19.7 - \text{minimum temperature}</math>, provided <math>\leq 11.5</math> (<math>^{\circ}\text{C}</math>)  Allow negative <math>\Delta T</math> values from minimum minus initial temperatures</p>	(2)

Question Number	Answer	Additional guidance	Mark
1(b)(iii)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• minimum temperature would be lower (1)</li> <li>• temperature would increase at a slower rate (<math>&gt; 90</math> s) (1)</li> <li>• less heat (from the surroundings) would enter the solution (1)</li> </ul>	<p><b>All marks are standalone</b></p> <p>Ignore any reference to endothermic / exothermic / <math>\Delta H</math></p> <p>Allow temperature (values) would be lower Allow temperature change would be greater</p> <p>Ignore minimum temperature reached sooner</p> <p>Do not award temperature values would be higher Do not award less heat loss</p> <p>Allow temperature would remain constant / rise more slowly (<math>&gt; 90</math> s) Allow slope of graph would be less steep (<math>&gt; 90</math> s)</p> <p>Allow heat would not enter Allow polystyrene cup is (better) insulated Allow glass beaker (better) conducts heat</p> <p>Ignore polystyrene cup absorbs more heat</p>	(3)

Question Number	Answer	Additional guidance	Mark
1(c)(i)	<p>An answer that refers to any <b>two</b> of the following points:</p> <ul style="list-style-type: none"> <li>• solution has a density of <math>1 \text{ g cm}^{-3}</math> (1)</li> <li>• mass of ammonium chloride / solid is ignored (1)</li> <li>• (specific) heat capacity of the solution is the same as water (1)</li> </ul>	<p>Ignore reference to purity of <math>\text{NH}_4\text{Cl}</math>            Ignore any reference to heat transfer            Ignore any reference to endothermic / exothermic            Ignore any reference to instantaneous reaction            Ignore any reference to standard / nonstandard conditions            Ignore any attempt at justification, including calculation</p> <p>Allow mass of solution is same as its volume            Allow the density of the solution is the same as water</p> <p>Allow mass of solution is 50 g            Allow mass of ammonium chloride / solid is negligible</p> <p>Allow heat capacity of the solution is <math>4.18 / 4.2 \text{ (J g}^{-1} \text{ }^\circ\text{C}^{-1})</math>            Allow heat capacity of beaker / apparatus can be ignored / is negligible</p>	(2)

Question Number	Answer	Additional guidance	Mark
1(c)(ii)	<p>An answer that makes reference to the following points:</p> <p><b>Method 1</b></p> <ul style="list-style-type: none"> <li>calculation of uncertainty in experimental value (1)</li> <li>indication that experimental value is consistent with data book value (1)</li> </ul> <p><b>Method 2</b></p> <ul style="list-style-type: none"> <li>calculation of percentage change from experimental to data book value (1)</li> <li>indication that percentage change is less than experimental uncertainty (1)</li> </ul>	<p>Example of calculation:</p> <p>Ignore SF except 1SF Ignore truncation of values in intermediate working, eg 0.37 for 0.377</p> <p>uncertainty = <math>2.6 \div 100 \times 14.5</math> (= 0.377 kJ mol<sup>-1</sup>) Do not award the use of 14.8 instead of 14.5</p> <p><math>14.5 + 0.377 = 14.877</math> (kJ mol<sup>-1</sup>) Accept <math>14.8 - 0.377 = 14.423</math> (kJ mol<sup>-1</sup>) Accept <math>0.3 &lt; 0.377</math></p> <p><math>14.5 \times 1.026 = 14.877 / 14.88 / 14.9</math> (kJ mol<sup>-1</sup>) scores (2)</p> <p>Award 1 mark for TE on use of 14.8 in M1: <math>14.5 + 0.3848 = 14.8848</math> (kJ mol<sup>-1</sup>) Allow <math>14.8 - 0.3848 = 14.4152</math> (kJ mol<sup>-1</sup>) <math>0.3 &lt; 0.3848</math></p> <p>percentage change = <math>(14.8 - 14.5) \div 14.5 \times 100</math> (= 2.06897 %) Allow <math>14.8 \div 14.5 \times 100</math> (= 102.6897 %) Do not award division by 14.8 instead of 14.5</p> <p><math>2.06897 &lt; 2.6</math> Award 1 mark for TE on division by 14.8 in M1: <math>2.02703 &lt; 2.6</math></p>	(2)

(Total for Question 1 = 14 marks)

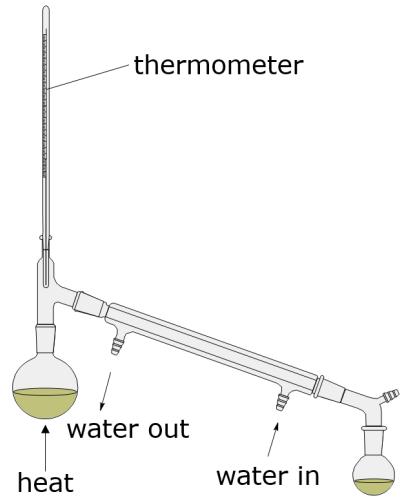

Question Number	Answer	Additional guidance	Mark
2(a)(i)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>mass / weight of each U-tube and their contents (1)</li> <li>mass / weight before and after combustion / reaction (1)</li> </ul>	<p>Ignore any reference to amount / volume Ignore any reference to temperature / time</p> <p>Allow mass / weight of silica (gel) <b>and</b> soda lime Ignore reference to mass of X remaining Ignore mass of O<sub>2</sub></p> <p><b>M2 dependent on mention of U-tube / silica / soda lime</b> Allow initial mass / weight <b>and</b> final mass / weight Allow change in mass / weight</p> <p>If no other mark awarded, mass / weight of H<sub>2</sub>O <b>and</b> CO<sub>2</sub> absorbed / produced scores (1)</p>	(2)

Question Number	Answer	Additional guidance	Mark
2(a)(ii)	<p>An answer that refers to any <b>two</b> of the following points:</p> <ul style="list-style-type: none"> <li>to exclude water from the air (1)</li> <li>to exclude carbon dioxide from the air (1)</li> <li>for complete combustion (1)</li> </ul>	<p>Ignore any reference to unwanted side reactions Ignore any reference to air being a mixture Ignore air contains O<sub>2</sub> / N<sub>2</sub> / noble gases Ignore so mass of H<sub>2</sub>O and CO<sub>2</sub> can be measured more accurately Ignore any reference to rate / efficiency / yield of combustion</p> <p>Allow because it is dry Allow air might be damp / contains H<sub>2</sub>O Do not award air contains hydrogen / H<sub>2</sub></p> <p>Allow air contains CO<sub>2</sub></p> <p>Allow (to ensure X is) fully combusted Allow (to ensure) complete reaction Allow to prevent incomplete combustion in air</p>	(2)

Question Number	Answer	Additional guidance	Mark
2(a)(iii)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• mass of oxygen</li> <li>• mols C, H and O</li> <li>• mole ratio <b>and</b> empirical formula</li> </ul>	<p>Example of calculation:</p> <p>Allow truncation of mass and mols in intermediate working, eg 0.05 for 0.0525</p> <p>(1) mass O = <math>1.33 - 0.14 - 0.63</math> = 0.56 (g)</p> <p>(1) <math display="block">\begin{array}{ccc} \text{C} &amp; : &amp; \text{H} &amp; : &amp; \text{O} \\ \frac{0.63}{12} &amp; : &amp; \frac{0.14}{1} &amp; : &amp; \frac{0.56}{16} \\ 0.0525 &amp; : &amp; 0.14 &amp; : &amp; 0.035 \end{array}</math> <p>TE on M1</p> <p><b>M3 dependent on use of mols</b></p> <p>(1) <math display="block">\begin{array}{ccc} \text{C} &amp; : &amp; \text{H} &amp; : &amp; \text{O} \\ 1.5 &amp; : &amp; 4 &amp; : &amp; 1 \\ 3 &amp; : &amp; 8 &amp; : &amp; 2 \end{array}</math> <p>empirical formula is C<sub>3</sub>H<sub>8</sub>O<sub>2</sub></p> <p>TE on M2</p> <p>Correct answer with some working scores (3)</p> <p>Correct answer with no working scores (1)</p> </p></p>	(3)

Question Number	Answer	Additional guidance	Mark
2(b)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>(X contains) O–H / hydroxyl (group)</li> </ul>	<p>Allow OH / –OH / hydroxy</p> <p>Allow “(X is) either alcohol or carboxylic acid”</p> <p>Ignore just alcohol / diol</p> <p>Ignore just carboxylic acid</p> <p>Do not award hydroxide / OH<sup>–</sup></p>	(1)

Question Number	Answer	Additional guidance	Mark
2(c)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>round-bottom / pear shaped flask <b>and</b> still head <b>and</b> thermometer (1)</li> <li>(downward-sloping) Liebig condenser with inner tube <b>and</b> labelled water flow (1)</li> <li>heat <b>and</b> unsealed collection vessel <b>and</b> left hand side of apparatus sealed (1)</li> </ul>	<p>Example of diagram:</p>  <p>Allow any form of heating</p> <p>Allow fractionating column (in place of still head)</p> <p>Allow omission of flask contents</p> <p>Do not award M1 for a one-piece apparatus</p> <p>Do not award M1 if thermometer bulb is in the liquid</p>	(3)

Question Number	Answer	Additional guidance	Mark
2(d)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>(broad) peak at <math>3220\text{ cm}^{-1}</math> <b>and</b> (indicates an) O–H (in a carboxylic acid) (1)</li> <li>peak at <math>1720\text{ cm}^{-1}</math> <b>and</b> (indicates) C=O (1)</li> </ul>	<p>Allow identification of peaks and bonds on annotated spectrum</p> <p>Allow any wavenumber or range of values within 3300–2500</p> <p>Allow OH / –OH for O–H Do not award O–H in alcohol Ignore C–H</p> <p>Allow any wavenumber or range of values within 1740–1680 Ignore aldehyde / ketone Do not award C=C</p> <p>If no other mark awarded, award 1 mark if both peaks / ranges given but bonds missing</p> <p>Comment Allow transmittance for absorbance Ignore any reference to the fingerprint region</p>	(2)

Question Number	Answer	Additional guidance	Mark
2(e)(i)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>molecular (ion) / <math>M^{(+)}</math> peak at <math>m/z = 88</math> <b>and</b> (relative molecular mass of) <math>C_3H_4O_3</math> is 88</li> </ul>	<p>Allow peak to the far right / with the highest <math>m/z</math> is 88 Allow any indication of <math>M^{(+)}</math> peak being 88 Ignore just peak at <math>m/z</math> is 88</p>	(1)

Question Number	Answer	Additional guidance	Mark
2(e)(ii)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>• <math>\text{CH}_3\text{CO}^+</math></li> </ul>	<p>Accept displayed/skeletal formula with charge</p> <p>Allow any position of charge, eg <math>^+\text{CH}_3\text{CO}</math></p> <p>Allow <math>\text{CH}_2\text{CHO}^+ / \text{CH}_2\text{COH}^+ / \text{HC}=\text{CH}(\text{OH})^+ / \text{CH}_2=\text{C}(\text{OH})^+</math></p> <p>Ignore just <math>\text{C}_2\text{H}_3\text{O}^+</math></p> <p>Do not award <math>\text{C}_3\text{H}_7^+</math></p>	(1)

Question Number	Answer	Additional guidance	Mark
2(f)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• structure of X (1)</li> <li>• structure of Y (1)</li> </ul>	<p>Accept structural, displayed or skeletal formula or any correct combination of these</p> <p>If more than one type of formula given, all must be correct</p> <p>Ignore connectivity of vertical OH</p> <p>Penalise horizontal C–HO connectivity once only</p> <p>Ignore names even if incorrect</p> <p>Example of structure: <math>\text{CH}_3\text{CH}(\text{OH})\text{CH}_2\text{OH}</math></p> <p>Example of structure: <math>\text{CH}_3\text{COCO}(\text{OH})\text{H}</math> Allow <math>\text{CH}_2=\text{C}(\text{OH})\text{CO}(\text{OH})\text{H}</math></p>	(2)

(Total for Question 2 = 17 marks)

Question Number	Answer	Additional guidance	Mark
3(a)(i)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>correct species <b>and</b> balancing <b>and</b> state symbols</li> </ul>	<p>Example of equation:</p> $\text{Ba}^{2+}(\text{aq}) + \text{SO}_4^{2-}(\text{aq}) \rightarrow \text{BaSO}_4(\text{s})$ <p>Ignore full equation as working</p> <p>Do not award uncanceled spectator ions</p>	(1)

Question Number	Answer	Additional guidance	Mark
3(a)(ii)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>(to remove) barium ions / <math>\text{Ba}^{2+}</math> (that would otherwise) form a precipitate with chromate(VI) ions / <math>\text{CrO}_4^{2-}</math></li> </ul>	<p>Allow to stop formation of barium chromate(VI) / <math>\text{BaCrO}_4</math></p> <p>Allow to stop <math>\text{Ba}^{2+} + \text{CrO}_4^{2-} \rightarrow \text{BaCrO}_4</math></p> <p>Allow to stop barium ions reacting with the indicator / chromate(VI) ions / <math>\text{CrO}_4^{2-}</math></p> <p>Allow would otherwise make the end-point hard to determine</p>	(1)

Question Number	Answer	Additional guidance	Mark
3(b)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>silver chloride is (much) less soluble (than silver chromate(VI))</li> </ul>	<p>Accept solubility product / <math>K_{\text{sp}}</math> of silver chloride is (much) smaller than that of silver chromate(VI)</p> <p>Allow reverse arguments</p> <p>Ignore chloride ions are more reactive than chromate ions</p> <p>Ignore reaction with chloride ions is faster</p>	(1)

Question Number	Answer	Additional guidance	Mark																				
3(c)(i)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"><li>three values correctly recorded in table (1)</li><li>calculation of mean titre to 2DP from concordant results (1)</li></ul>	<p>Example of completed table and calculation:</p> <table><tr><td>Titration number</td><td>1</td><td>2</td><td>3</td><td>4</td></tr><tr><td>Burette reading (final) / cm<sup>3</sup></td><td>16.15</td><td>32.05</td><td>48.30</td><td>47.40</td></tr><tr><td>Burette reading (initial) / cm<sup>3</sup></td><td>0.00</td><td>16.15</td><td>32.50</td><td>31.55</td></tr><tr><td>Titre / cm<sup>3</sup></td><td>16.15</td><td><u>15.9(0)</u></td><td><u>15.8(0)</u></td><td><u>15.85</u></td></tr></table> <p>mean titre = <math>\frac{(15.9(0) + 15.8(0) + 15.85)}{3}</math> = 15.85 (cm<sup>3</sup>)</p> <p>TE on averaging of concordant results from incorrect subtraction in table</p> <p>Do not award 15.85 from <math>(15.90 + 15.80) \div 2</math></p>	Titration number	1	2	3	4	Burette reading (final) / cm <sup>3</sup>	16.15	32.05	48.30	47.40	Burette reading (initial) / cm <sup>3</sup>	0.00	16.15	32.50	31.55	Titre / cm <sup>3</sup>	16.15	<u>15.9(0)</u>	<u>15.8(0)</u>	<u>15.85</u>	(2)

**(Total for Question 3 = 10 marks)**

Question Number	Answer	Additional guidance	Mark
4(a)(i)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>to absorb / remove water (1)</li> <li>(as water) would otherwise react with aluminium chloride / the product (1)</li> </ul>	<p>Allow to absorb / remove moisture Allow drying agent / to dry the gas</p> <p>Ignore absorption of any other chemical, eg HCl</p> <p>Do not award dehydrating agent</p> <p><b>M2 dependent on some mention of water / steam / drying</b> Allow (water) reacts with aluminium Allow (reaction with water) would decrease the yield</p> <p>Do not award any reference to rusting / corrosion</p>	(2)

Question Number	Answer	Additional guidance	Mark
4(a)(ii)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>to enable gases / chlorine / Cl<sub>2</sub> to pass through (easily)</li> </ul>	<p>Accept reverse argument Allow to prevent build-up of pressure / blocking tube</p> <p>Ignore granules stay in position / powder moves</p> <p>Do not award references to surface area / rate</p>	(1)

Question Number	Answer	Additional guidance	Mark
4(b)(i)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>toxic / poisonous (1)</li> <li>(perform experiment in a) fume cupboard (1)</li> </ul>	<p><b>Mark M1 and M2 separately</b></p> <p>Ignore irritant / harmful / dangerous / corrosive / health hazard</p> <p>Do not award flammable</p> <p>Allow fume box / fume hood</p> <p>Ignore wear a gas mask</p> <p>Ignore use smaller amounts</p> <p>Ignore wear safety goggles / gloves</p>	(2)

Question Number	Answer	Additional guidance	Mark
4(b)(ii)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>to provide a steady stream of chlorine / gas <b>or</b> to prevent chlorine / gas being produced too quickly</li> </ul>	<p>Accept reverse arguments</p> <p>Allow to control the rate of reaction / production of chlorine</p> <p>Allow so that the reaction is slow / not too fast</p> <p>Allow to prevent vigorous reaction</p> <p>Ignore to prevent violent reaction / explosion / breaking flask</p> <p>Ignore build-up of pressure</p> <p>Ignore to prevent (acid) spray / boiling over</p> <p>Ignore exothermic reaction</p> <p>Ignore to ensure complete reaction</p> <p>Do not award any gas other than chlorine</p>	(1)

Question Number	Answer	Additional guidance	Mark
4(c)	<p>An answer that makes reference to one of the following:</p> <ul style="list-style-type: none"> <li>to allow chlorine to displace air from the apparatus</li> </ul> <p><b>or</b></p> <p>to prevent oxygen reacting with the aluminium</p> <p><b>or</b></p> <p>to prevent the formation of aluminium oxide</p>	<p>Allow to fill the apparatus with chlorine (gas)</p> <p>Allow to remove all air from the apparatus</p> <p>Ignore so that the chlorine reaches the aluminium first</p> <p>Allow to prevent air from reacting with the aluminium</p> <p>Allow so only chlorine reacts with the aluminium</p>	(1)

Question Number	Answer	Additional guidance	Mark
4(d)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>(when the aluminium) stops glowing</li> </ul>	<p>Allow when all the aluminium / solid has turned white</p> <p>Allow when no more aluminium foil remains</p> <p>Ignore when aluminium foil is not as bright / starts to dim</p> <p>Ignore just when no further change is seen</p> <p>Ignore when no more product collects in the receiver bottle</p> <p>Ignore just when all reactants are used up</p> <p>Ignore any reference to mass of reactants / products</p>	(1)

Question Number	Answer	Additional guidance	Mark
4(e)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>to absorb (unreacted) chlorine / hydrogen chloride (gas)</li> </ul>	<p>Allow react with / remove / neutralise for absorb</p> <p>Allow to absorb acidic gases Allow to exclude water (from the air)</p> <p>Ignore to absorb hydrochloric acid Ignore just to absorb acid Ignore just to absorb excess gas Ignore to limit escape of toxic / harmful / dangerous gas</p> <p>Do not award to absorb carbon dioxide</p>	(1)
