

Mark Scheme (Results)

October 2019

Pearson Edexcel International Advanced Level
In Chemistry (WCH12)
Paper 01 Energetics, Group Chemistry,
Halogenoalkanes and Alcohols

Section A

| Question Number | Answer | Mark |
|-----------------|---|------|
| 1 | <p>The only correct answer is C (1.20)</p> <p><i>A is incorrect because this is the volume of 1 mol</i></p> <p><i>B is incorrect because this is a factor of 10 out</i></p> <p><i>D is incorrect because the inverse of the number of mols of lithium carbonate has been divided by 24.0</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 2 | <p>The only correct answer is C (3)</p> <p><i>A is incorrect because different isotopes of chlorine have been ignored</i></p> <p><i>B is incorrect because different isotope combinations of chlorine have not been considered</i></p> <p><i>D is incorrect because $^{35}\text{Cl}/^{37}\text{Cl}$ and $^{37}\text{Cl}/^{35}\text{Cl}$ give the same peak</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 3 | <p>The only correct answer is D ($\Delta_f H$ (carbon monoxide) = $-110.5 \text{ kJ mol}^{-1}$)</p> <p><i>A is incorrect because there are 2 mol of carbon in the equation and combustion is incomplete</i></p> <p><i>B is incorrect because there are 2 mol of carbon monoxide in the equation</i></p> <p><i>C is incorrect because the combustion is incomplete</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|--|------|
| 4 | <p>The only correct answer is D (London forces)</p> <p><i>A is incorrect because covalent bonds are between atoms not molecules</i></p> <p><i>B is incorrect because there are no hydrogen bonds as electronegativity of iodine is low</i></p> <p><i>C is incorrect because there are no ions present</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|--|------|
| 5(a) | <p>The only correct answer is C (Reaction 3)</p> <p><i>A is incorrect because different species are oxidised and reduced</i></p> <p><i>B is incorrect because different species are oxidised and reduced</i></p> <p><i>D is incorrect because there is no change in oxidation state</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|--|------|
| 5(b) | <p>The only correct answer is D (Reaction 4)</p> <p><i>A is incorrect because neither reactant is acting as an acid or base</i></p> <p><i>B is incorrect because this is a redox reaction</i></p> <p><i>C is incorrect because neither reactant is acting as an acid or base and it is a redox reaction</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 6 | <p>The only correct answer is C (barium sulfate is less soluble in water than magnesium sulfate)</p> <p><i>A is incorrect because carbonate thermal stability increases down Group 2</i></p> <p><i>B is incorrect because hydroxide solubility increases down Group 2</i></p> <p><i>D is incorrect because barium is more reactive than magnesium with water</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 7 | <p>The only correct answer is C (chloride ions are stronger reducing agents than bromide ions)</p> <p><i>A is incorrect because chlorine is more electronegative than bromine</i></p> <p><i>B is incorrect because chlorine is more reactive than bromine</i></p> <p><i>D is incorrect because chloride ions are stronger reducing agents than fluoride ions</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|--|------|
| 8 | <p>The only correct answer is A (SrBr_2)</p> <p><i>B is incorrect because sodium produces a yellow flame test</i></p> <p><i>C is incorrect because although the flame test would be red the silver halide ppt would be white</i></p> <p><i>D is incorrect because the flame test would be green and the silver halide ppt would be yellow and insoluble in concentrated ammonia</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 9(a) | <p>The only correct answer is B (0.50)</p> <p><i>A is incorrect because 0.050 is the number of moles produced</i></p> <p><i>C is incorrect because the solution concentration is assumed to be the same as the alkali</i></p> <p><i>D is incorrect because the solution concentration is assumed to be equal to that of the acid</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 9(b) | <p>The only correct answer is B ($\pm 0.20\%$)</p> <p><i>A is incorrect because both solutions have been considered</i></p> <p><i>C is incorrect because the uncertainty has not been doubled</i></p> <p><i>D is incorrect because the volume measured has been ignored</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|--|------|
| 10 | <p>The only correct answer is A (NaCl and NaClO)</p> <p><i>B is incorrect because both products are the result of oxidation</i></p> <p><i>C is incorrect because the reaction is not heated and the solution is not concentrated</i></p> <p><i>D is incorrect because both products are the result of oxidation</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 11 | <p>The only correct answer is D (SO_3)</p> <p><i>A is incorrect because H_2S is a product</i></p> <p><i>B is incorrect because I_2 is a product</i></p> <p><i>C is incorrect because S is a product</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 12 | <p>The only correct answer is B (decreasing the concentration of the hydrochloric acid)</p> <p><i>A is incorrect because an increase in reactant concentration would reduce the time taken</i></p> <p><i>C is incorrect because raising the temperature would reduce the time taken</i></p> <p><i>D is incorrect because adding a catalyst would reduce the time taken</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 13(a) | <p>The only correct answer is A (increase rate, decrease yield)</p> <p><i>B is incorrect because an increase in temperature would increase the rate</i></p> <p><i>C is incorrect because the equilibrium would move to the left, i.e. endothermic direction</i></p> <p><i>D is incorrect because an increase in temperature would increase the rate and the equilibrium would move to the left, i.e. endothermic direction</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|--|------|
| 13(b) | <p>The only correct answer is C (increase rate, increase yield)</p> <p><i>A is incorrect because an increase in pressure would increase the yield</i></p> <p><i>B is incorrect because an increase in pressure would increase the rate and yield</i></p> <p><i>D is incorrect because an increase in pressure would increase the rate</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|--|------|
| 14 | <p>The only correct answer is B (2-chloro-2-methylpropane)</p> <p><i>A is incorrect because a primary alcohol would be formed which would be oxidised</i></p> <p><i>C is incorrect because a primary alcohol would be formed which would be oxidised</i></p> <p><i>D is incorrect because a secondary alcohol would be formed which would be oxidised</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|--|------|
| 15(a) | <p>The only correct answer is B (oxidising propan-1-ol to propanal)</p> <p><i>A is incorrect because reducing an alcohol would produce an alkane</i></p> <p><i>C is incorrect because reducing propanal would produce propan-1-ol</i></p> <p><i>D is incorrect because oxidising propan-1-ol would produce propanal or propanoic acid</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 15(b) | <p>The only correct answer is A (propan-1-ol)</p> <p><i>B is incorrect because propan-2-ol would not be expected to form a $^+\text{CH}_2\text{OH}$ fragment</i></p> <p><i>C is incorrect because propanal would not be expected to form a $^+\text{CH}_2\text{OH}$ fragment</i></p> <p><i>D is incorrect because propanone would not be expected to form a $^+\text{CH}_2\text{OH}$ fragment</i></p> | (1) |

| Question Number | Answer | Mark |
|-----------------|---|------|
| 15(c) | <p>The only correct answer is C (propanal)</p> <p><i>A is incorrect because propan-1-ol would have a broad absorption at $3750\text{--}3200\text{ cm}^{-1}$ due to $-\text{OH}$</i></p> <p><i>B is incorrect because propan-2-ol would have a broad absorption at $3750\text{--}3200\text{ cm}^{-1}$ due to $-\text{OH}$</i></p> <p><i>D is incorrect because the absorption due to $\text{C}=\text{O}$ in propanone would be at $1720\text{--}1700\text{ cm}^{-1}$ and C-H stretching vibrations at $2775\text{--}2700\text{ cm}^{-1}$ would be absent</i></p> | (1) |

(Total for Section A = 20 marks)

Section B

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|---|------|
| 16(a) | <ul style="list-style-type: none"> correct balanced equation | <p>Example of equation:</p> $\text{Ca} + 2\text{H}_2\text{O} \rightarrow \text{Ca}(\text{OH})_2 + \text{H}_2$ <p>or multiples</p> <p>Allow</p> $\text{Ca} + \text{H}_2\text{O} \rightarrow \text{CaO} + \text{H}_2$ <p>Ignore state symbols even if incorrect</p> | (1) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|--|------|
| 16(b) | <p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> concentration of hydroxide ions is greater calcium hydroxide is more soluble than magnesium hydroxide | <p>(1) Allow more hydroxide ions are in solution</p> <p>(1) Allow the solubility of the hydroxides increases going down Group 2 reverse argument</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|---|------|
| 16(c)(i) | <ul style="list-style-type: none"> correct ionic equation | <p>Example of equation:</p> $\text{CO}_3^{2-} + 2\text{H}^+ \rightarrow \text{CO}_2 + \text{H}_2\text{O}$ <p>Ignore state symbols even if incorrect</p> <p>Do not award H_2CO_3 / H^+ + HCO_3^- as final products</p> | (1) |

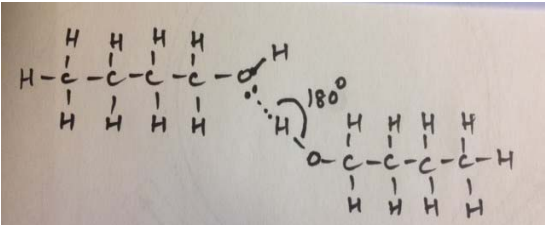

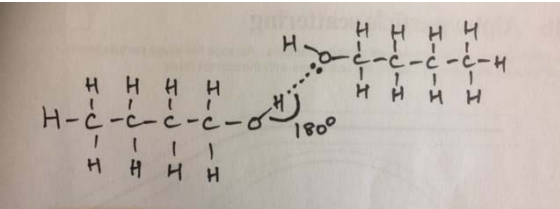

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|---|------|
| 16(c)(ii) | <ul style="list-style-type: none"> correct balanced equation (1) state symbols (1) | <p>Example of equation:</p> $\text{CO}_2(\text{g}) + \text{Ca}(\text{OH})_2(\text{aq}) \rightarrow \text{CaCO}_3(\text{s}) + \text{H}_2\text{O}(\text{l})$ <p>M2 depends on M1 Allow equation near miss e.g. $\text{Ca}(\text{OH})_2 + \text{CO}_2 \rightarrow \text{CaCO}_2 + \text{H}_2\text{O}$ or all correct species being present</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|--|------|
| 16(d) | <ul style="list-style-type: none"> calculation of the amount of Mg(OH)_2 (1) calculation of M_r Mg(OH)_2 (1) calculation of mass Mg(OH)_2 and answer given to 2 or 3 SF (1) | <p>Example of calculation: Amount of $\text{Mg(OH)}_2 = 0.150 \div 2$ $= 0.075 \text{ (mol)}$ $M_r \text{ Mg(OH)}_2 = 58.3$ Mass of $\text{Mg(OH)}_2 = 0.075 \times 58.3$ $= 4.3725 \text{ (g)}$ $= 4.4 / 4.37 \text{ (g)}$</p> <p>Allow if $\text{Mg} = 24$ then $M_r = 58$ and mass = $4.4 / 4.35$</p> <p>Correct answer to 2 or 3 SF with no working scores (3)</p> | (3) |

(Total for Question 16 = 9 marks)

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|---|------|
| 17(a)(i) | <ul style="list-style-type: none"> (2)-methylpropan-1-ol and primary (1) butan-2-ol and secondary (1) <div style="display: inline-block; vertical-align: middle; text-align: center;"> <div style="margin-bottom: 5px;">OH</div> <div style="display: flex; align-items: center;"> <div style="width: 20px; height: 2px; background-color: black; margin-right: 5px;"></div> <div style="width: 2px; height: 20px; background-color: black; margin-right: 5px;"></div> <div style="width: 20px; height: 2px; background-color: black;"></div> </div> </div> and tertiary (1) | All 6 correct scores 3 4 or 5 correct scores 2 2 or 3 correct scores 1 Ignore bond lengths and bond angles Do not award displayed formula | (3) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|--|------|
| 17(a)(ii) | <p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> Identification of (at least) one of the intermolecular forces and a comparison of its strength in the two molecules an explanation for this difference | <p>Accept reverse argument (butan-1-ol has a higher boiling temperature than 2-methylpropan-2-ol because)</p> <p>(1) the instantaneous dipoles-induced dipoles / London forces / dispersion forces / van der Waals forces are stronger between straight chains Allow There are more London forces OR the hydrogen bonding is stronger between straight chain molecules</p> <p>(1) the straight chain molecule/ butan-1-ol has greater surface area / more points of contact OR as the -OH group is more exposed / less hindered (so less energy is needed to break the intermolecular forces)</p> <p>If the explanation is in terms of London forces, ignore 'hydrogen bonding is similar / same'</p> <p>Ignore 'references to "longer carbon chain" Do not award Any reference to longer carbon bonds/breaking covalent bonds</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|---|------|
| 17(a)(iii) | <ul style="list-style-type: none"> • $\text{O} \cdots \text{H} - \text{O}$ • bond $\text{O}-\text{H}-\text{O}$ must be shown as (approximately) linear <p>and angle labelled as 180°</p> | <p>Example of diagrams:</p> <p>(1)</p>  <p>(1)</p> <p>OR</p>  <p>Do not penalise omission of lone pair on the oxygen or errors in the carbon chain e.g. missing Hs</p> <p>Do not award</p> <p>hydrogen bond shown as a solid line (M1)</p> <p>$\text{H}-\text{O} \cdots \text{H}$ bond shown as 180° (M2)</p> <p>Incorrect $-\text{OH}$ attachment to chain (M2)</p> <p>ignore bond lengths</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|---|------|
| 17(b)(i) | <ul style="list-style-type: none"> balanced equation | $ \begin{array}{c} \text{H} & \text{H} & \text{H} & \text{H} & \text{H} \\ & & & & \\ \text{H}-\text{C}-\text{C}-\text{C}-\text{C}-\text{O} \\ & & & & \\ \text{H} & \text{H} & \text{H} & \text{H} & \text{H} \end{array} + 6 \text{O}=\text{O} $ $ \longrightarrow 4 \text{O}=\text{C}=\text{O} + 5 \text{H}-\text{O}-\text{H} $ | (1) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|--|------|
| 17(b)(ii) | <ul style="list-style-type: none"> calculation or working of energy needed to break bonds calculation or working of energy released when bonds are made calculation of energy change and give a sign | <p>Here, and throughout the paper do not penalise mol⁻ for mol⁻¹</p> <p>(1) Energy to break all bonds: $(3 \times 347) + (9 \times 413) + 358 + 464 + (6 \times 498)$ $= 8568 \text{ (kJ mol}^{-1}\text{)}$</p> <p>(1) Energy released when all bonds made: $(10 \times 464) + (8 \times 805) = 11080 \text{ (kJ mol}^{-1}\text{)}$</p> <p>(1) $-11080 + 8568 = -2512 \text{ (kJ mol}^{-1}\text{)}$</p> <p>Do not award incorrect units</p> <p>TE on incorrect balancing of equation and TE at each stage of calculation</p> <p>Ignore SF except 1SF Correct answer no working scores (3) Comment Common error is the use of 6.5×498 (forgets about the alcohol oxygen). This gives $-2263 \text{ kJ mol}^{-1}$ scores 2.</p> | (3) |

| Question Number | Answer | Additional Guidance | Mark |
|-------------------|---|--|------------|
| 17(b)(iii) | <p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> mean bond enthalpies do not refer to specific compounds such as butan-1-ol/ mean bond enthalpies are averages/mean for different molecules/bonds in different environments/compounds (1) butan-1-ol is a liquid and bond enthalpies refer to gases OR mean bond enthalpy calculations do not include changes of state (1) | <p>Ignore just "mean bond enthalpies are an average"</p> <p>Ignore references to standard conditions Just 'different states'</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|---|------------|
| 17(c)(i) | <ul style="list-style-type: none"> calculation of energy produced per gram (1) calculation of energy produced per cm³ (1) <p>OR</p> <ul style="list-style-type: none"> calculation of moles in 1 cm³ (1) calculation of energy produced per cm³ (1) | <p>Example of calculations:</p> <p>$(-2670 \div 74 = (-)36.081/36.1 / 36 \text{ (kJ g}^{-1}\text{)})$</p> <p>$36.1 \times 0.81 = 29.226/29.2 / 29 \text{ (MJ dm}^{-3}\text{)}$</p> <p>$0.81 / 74 = 0.010946 \text{ (moles)}$</p> <p>$0.010946 \times (-)2670$ $= 29.226/29.2 / 29 \text{ (MJ dm}^{-3}\text{)}$</p> <p>Units, if given, must be correct in MJ dm⁻³ Correct answer with no working scores (2) Ignore sign and SF except 1SF</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|---|------------|
| 17(c)(ii) | <p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> • biobutanol has a longer hydrocarbon / alkane chain/ more electrons than bioethanol (1) • so more/stronger London forces / dispersion forces / Van der Waals forces between biobutanol and petrol (than bioethanol and petrol) (1) | <p>Ignore references to polarity, non-polar parts</p> <p>Allow London forces in biobutanol and petrol are similar Do not award just "biobutanol has stronger London forces than bioethanol"</p> | (2) |

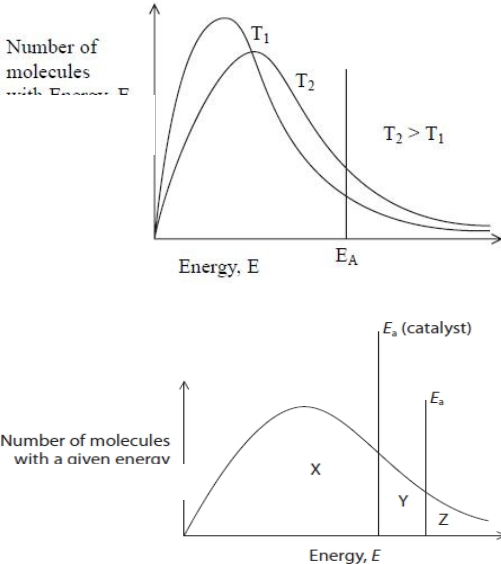

(Total for Question 17 = 17marks)

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|---|------|
| 18(a)(i) | <ul style="list-style-type: none"> the arrow pointing to the C=C bond is incorrect and the arrow should be pointing away from the bond (1) the partial charge on the C in the intermediate is incorrect and it should be a full positive charge (1) | <p>Ignore references to lone pairs of electrons</p> <p>Either/both marks could be scored by annotations to the mechanism or using structures in the answer spaces</p> | (2) |

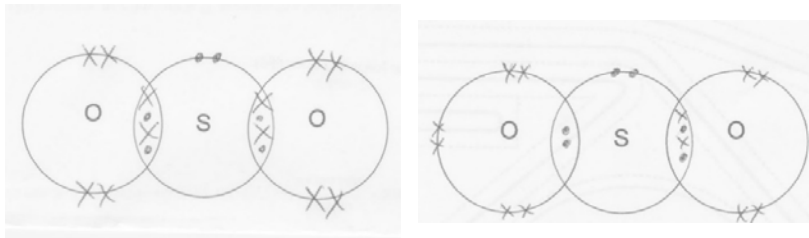

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|---|------|
| 18(a)(ii) | <ul style="list-style-type: none"> balanced equation (1) calculation of mass of chloroethene and total mass of reactants / products (1) calculation of % atom economy (1) | <p>$C_2H_4 + Cl_2 \rightarrow C_2H_3Cl + HCl$ Ignore state symbols (even if incorrect)</p> <p>Mass of chloroethene = 62.5 Total mass of reactants / products = 99</p> <p>% Atom economy = $\frac{62.5}{99} \times 100$ = 63.131(%) = 63.1(%)</p> <p>TE on incorrect equation providing the product is chloroethene incorrect molecular masses no TE on incorrect atom economy expression If no other mark is scored correct expression for atom economy scores 1</p> <p>Ignore SF except 1SF Correct answer with no working scores M3</p> | (3) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|--|------------|
| 18(b) | <p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> Atom economy (of process A is < 100% but) in process B it is 100% (1) in process A HCl(g) is produced which is toxic / corrosive or catalyst for process B / Mercury / Mercury(II) chloride is highly toxic (1) | <p>Allow no other product formed in process B</p> <p>Ignore just "process B has a higher atom economy than A"</p> <p>Accept reverse arguments e.g. A does not require a toxic catalyst</p> <p>M2 - Allow both processes use non-renewable starting material</p> <p>Do not award Ozone depletion</p> <p>Ignore references to energy involved in either process/ greenhouse gases / acid rain</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|---|------------|
| 19(a)(i) |  <p>Allow either of the diagrams above</p> <ul style="list-style-type: none"> At least one double bond correct (1) All other electrons correct (1) | <p>Allow all dots or all crosses</p> <p>Unbonded electron pairs may be at any position on circles or just inside the circles</p> <p>Ignore lines for covalent bonds</p> <p>Electrons do not have to be paired</p> <p>Bonding electrons may be in the intersection space or on the lines bounding this space</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|------------------|------------------------|----------------------------------|------------|
| 19(a)(ii) | bond angle 120° | Allow 117° to 123° | (1) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|---|---|------------|
| 19(b)(i) | <ul style="list-style-type: none"> two concordant titres had already been obtained | <p>Allow Just 'titres are concordant'</p> <p>The (last two) titres are within 0.2 / 0.1 cm³</p> <p>only 10 cm³ solution left so impossible to pipette a further sample or wtte only a limited/small amount of solution remains</p> <p>Do not award Three titres are concordant The (last two) titres are within $\pm 0.2 / \pm 0.1$ cm³</p> | (1) |

| Question Number | Answer | Additional Guidance | Mark |
|------------------|--|---|------------|
| 19(b)(ii) | <ul style="list-style-type: none"> calculation of moles NaOH in mean titre (1) moles sulfuric acid in 10 cm³ sample (1/2 moles NaOH) (1) moles sulfuric acid in 40 cm³ (previous answer x 4) (1) | <p>Example of calculation:</p> <p>$21.10/1000 \times 0.005$ $= 1.055 \times 10^{-4} / 0.0001055$ (mol)</p> <p>$5.275/5.28 \times 10^{-5} / 0.00005275$ (mol)</p> <p>$2.11 \times 10^{-4} / 0.000211$ (mol) Ignore SF except 1 SF</p> <p>Correct answer with no working scores 3</p> | (3) |

| Question Number | Answer | Additional Guidance | Mark |
|-------------------|---|---|------------|
| 19(b)(iii) | <ul style="list-style-type: none"> moles SO₂ in 40 cm³ same as answer to (ii) <p style="text-align: right;">(1)</p> | <p>2.11 × 10⁻⁴ / 0.000211 (mol)</p> <p>TE on 19(b)(ii)</p> | (1) |

| Question | Answer | Additional Guidance | Mark |
|------------------|--|---|------------|
| 19(b)(iv) | <ul style="list-style-type: none"> volume of atmospheric sample collected moles of gas in atmosphere concentration SO₂ in atmosphere <p>OR</p> <ul style="list-style-type: none"> volume SO₂ in atmosphere volume of atmospheric sample collected concentration SO₂ in atmosphere | <p>Example of calculation:</p> <p>10 x 30 = 300 (dm³)</p> <p>$\frac{300}{24} = 12.5$ (moles)</p> <p>$\frac{2.11 \times 10^{-4}}{12.5}$ = 1.688 × 10⁻⁵ / 1.69 × 10⁻⁵ / 0.00001688 = 16.88 / 16.9 / 17 (ppm)</p> <p>2.11 × 10⁻⁴ x 24 = 5.064 × 10⁻³ (dm³)</p> <p>10 x 30 = 300 (dm³)</p> <p>$\frac{5.064 \times 10^{-3}}{300}$ = 1.688 × 10⁻⁵ / 1.69 × 10⁻⁵ / 0.00001688 = 16.88 / 16.9 / 17 (ppm)</p> <p>Ignore SF except 1SF Correct answer no working scores 3</p> <p>TE on 19(b)(ii) and (b)(iii) and at each stage in (b)(iv)</p> | (3) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|---|------------|
| 19(c)(i) | <ul style="list-style-type: none"> correct equation | $2\text{O}_3 \rightarrow 3\text{O}_2$ Or multiples Do not award equations with uncanceled species Ignore state symbols even if incorrect | (1) |

| Question Number | Answer | Additional Guidance | Mark |
|------------------|--|--|------------|
| 19(c)(ii) | An answer which makes reference to two of the following: <ul style="list-style-type: none"> the chlorine free radical is regenerated many ozone molecules decompose for each free radical formed chlorine free radical causes a chain reaction | Ignore the chlorine free radical acts as a catalyst references to increase in skin cancer Do not award references to global warming | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|---|------------|
| 19(d)(i) | <ul style="list-style-type: none"> S (+)4 \rightarrow (+)6 (oxidation) (1) O (in O₂) 0 \rightarrow -2 (reduction) (1) | Award 1 mark for sulfur is oxidised and oxygen is reduced | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-----------------|--|---|------|
| 19(d)(ii) | <ul style="list-style-type: none"> Reactants energy level higher than that of products (1) Enthalpy change $-200 \text{ (kJ mol}^{-1}\text{)}$ labelled (dependent on correct M1) (1) | <div data-bbox="1220 342 1787 691"> </div> <p>Allow ΔH for -200 kJ mol^{-1} Do not award just 'reactants & products'</p> <p>Ignore Reactant & product states, even if incorrect Transition state / intermediate hump Comment allow double headed arrows</p> | (2) |

| Question Number | Answer | Additional Guidance | Mark |
|-------------------|---|--|------------|
| 19(d)(iii) | <ul style="list-style-type: none"> carbon dioxide is a greenhouse gas / causes global warming / causes a rise in temperature (1) sulfuric acid (from sulfur dioxide / trioxide) causes global cooling / causes a drop in temperature (1) the effect from sulfur dioxide is greater than that of the carbon dioxide (because the temperatures were lower after the eruption) (1) | <p>Ignore references to acid rain/ ozone depletion/radiation</p> <p>Allow sulfur trioxide for sulfuric acid Ignore sulfur dioxide is also a greenhouse gas</p> | (3) |
