

## Mark Scheme (Results)

January 2020

Pearson International Advanced Subsidiary Level  
In Chemistry (WCH11)  
Paper 01 Structure, Bonding and Introduction  
to Organic Chemistry

## Section A

Question Number	Answer	Mark
<b>1</b>	<p><b>The only correct answer is C</b> (17 protons, 20 neutrons, 18 electrons)</p> <p><i>A is incorrect because this shows the subatomic particles in <math>^{37}\text{Cl}^+</math> ion</i></p> <p><i>B is incorrect because this is for a chlorine-37 atom</i></p> <p><i>D is incorrect because the proton and neutron numbers are reversed</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>2</b>	<p><b>The only correct answer is A</b> (58.760)</p> <p><i>B is incorrect because this is the correct answer to 3 SF</i></p> <p><i>C is incorrect because a relative mass of 59 has been used for the first isotope and the answer is to 3 SF</i></p> <p><i>D is incorrect because a relative mass of 59 has been used for the first isotope</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>3</b>	<p><b>The only correct answer is D</b> (14)</p> <p><i>A is incorrect because 3 is the number of quantum shells</i></p> <p><i>B is incorrect because 6 is the total number of subshells</i></p> <p><i>C is incorrect because 9 is the number of orbitals in the third quantum shell</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>4</b>	<p><b>The only correct answer is B</b> (carbon)</p> <p><i>A is incorrect because lithium is an s-block element with one unpaired electron</i></p> <p><i>C is incorrect because fluorine is a p-block element with one unpaired electron</i></p> <p><i>D is incorrect because titanium is a d-block element with two unpaired electrons</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>5</b>	<p><b>The only correct answer is C</b> (aluminium)</p> <p><i>A is incorrect because there would not be a large jump between the third and fourth ionisations</i></p> <p><i>B is incorrect because there would not be a large jump between the third and fourth ionisations</i></p> <p><i>D is incorrect because there would not be a large jump between the third and fourth ionisations</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>6</b>	<p><b>The only correct answer is D</b> (315.3)</p> <p><i>A is incorrect because this is the relative formula mass of anhydrous barium hydroxide</i></p> <p><i>B is incorrect because the relative masses of 8H<sub>2</sub> and O have been added instead of 8H<sub>2</sub>O</i></p> <p><i>C is incorrect because an M<sub>r</sub> value of 16 has been used for water</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>7</b>	<p><b>The only correct answer is C</b> (1.1)</p> <p><i>A is incorrect because the volume has not been converted to dm<sup>3</sup></i></p> <p><i>B is incorrect because the volume has been divided by the amount of sodium sulfate</i></p> <p><i>D is incorrect because the volume has not been converted to dm<sup>3</sup> and the volume has been divided by the amount</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>8</b>	<p><b>The only correct answer is B</b> (MgO)</p> <p><i>A is incorrect because the ion charges are +1 and -1</i></p> <p><i>C is incorrect because the ion charges are +1 and -1 and the ionic radii are larger</i></p> <p><i>D is incorrect because the ionic radii are larger</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>9</b>	<p><b>The only correct answer is B</b> (MgI<sub>2</sub>)</p> <p><i>A is incorrect because fluoride ions are not as easily polarised as iodide ions</i></p> <p><i>C is incorrect because barium ions are less polarising than magnesium and fluoride ions are not easily polarised</i></p> <p><i>D is incorrect because barium ions are less polarising than magnesium ions</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>10(a)</b>	<p><b>The only correct answer is D</b> (white precipitate)</p> <p><i>A is incorrect because the reactants are colourless</i></p> <p><i>B is incorrect because no gas is given off</i></p> <p><i>C is incorrect because a precipitate forms</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>10(b)</b>	<p><b>The only correct answer is C</b> (<math>\text{Ba}^{2+}(\text{aq}) + \text{SO}_4^{2-}(\text{aq}) \rightarrow \text{BaSO}_4(\text{s})</math>)</p> <p><i>A is incorrect because the ion charges are not +1 and -1</i></p> <p><i>B is incorrect because the equation does not represent the formation of a precipitate</i></p> <p><i>D is incorrect because the spectator ions have not been cancelled</i></p>	<b>(1)</b>

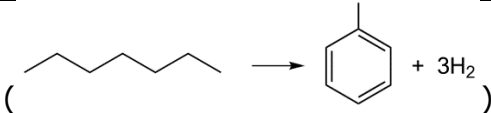

Question Number	Answer	Mark
<b>10(c)</b>	<p><b>The only correct answer is C</b> (0.560 g)</p> <p><i>A is incorrect because the molar masses of barium chloride and barium sulfate have been reversed</i></p> <p><i>B is incorrect because the molar, and not the mass, ratio is 1:1</i></p> <p><i>D is incorrect because the <math>M_r</math> of <math>\text{Na}_2\text{SO}_4</math> has been used instead of <math>\text{BaCl}_2</math></i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>10(d)</b>	<p><b>The only correct answer is C</b> (66.6%)</p> <p><i>A is incorrect because the total mass of reactants and products has been used</i></p> <p><i>B is incorrect because one mole of sodium sulfate has been used in place of two moles of sodium chloride</i></p> <p><i>D is incorrect because one mole of NaCl has been used in the equation</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>11</b>	<p><b>The only correct answer is A</b> (diamond)</p> <p><i>B is incorrect because C<sub>60</sub> fullerene contains delocalised electrons</i></p> <p><i>C is incorrect because graphene contains delocalised electrons</i></p> <p><i>D is incorrect because graphite contains delocalised electrons</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>12</b>	<p><b>The only correct answer is A</b> (OF<sub>2</sub>)</p> <p><i>B is incorrect because BF<sub>3</sub> is trigonal planar and the bond dipoles cancel</i></p> <p><i>C is incorrect because CF<sub>4</sub> is tetrahedral and the bond dipoles cancel</i></p> <p><i>D is incorrect because PF<sub>5</sub> is trigonal bipyramidal and the bond dipoles cancel</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>13</b>	<p><b>The only correct answer is A</b> (<math>\text{CH}_3^+</math>, trigonal planar, <math>120^\circ</math>)</p> <p><i>B is incorrect because the bond angle should be <math>107^\circ</math></i></p> <p><i>C is incorrect because the shape should be tetrahedral and the bond angle should be <math>109.5^\circ</math></i></p> <p><i>D is incorrect because the shape should be bent and the bond angle should be <math>104.5^\circ</math></i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>14</b>	<p><b>The only correct answer is D</b> ()</p> <p><i>A is incorrect because the equation represents a correctly balanced isomerisation</i></p> <p><i>B is incorrect because the equation is correctly balanced</i></p> <p><i>C is incorrect because the equation is correctly balanced</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>15</b>	<p><b>The only correct answer is A</b> (<math>\text{H}_2</math>)</p> <p><i>B is incorrect because <math>\text{H}_2\text{O}</math> is formed in the combustion of alkane fuels</i></p> <p><i>C is incorrect because <math>\text{CO}</math> is formed in the incomplete combustion of alkane fuels</i></p> <p><i>D is incorrect because <math>\text{CO}_2</math> is formed by the combustion of alkane fuels</i></p>	<b>(1)</b>

Question Number	Answer	Mark
<b>16</b>	<p><b>The only correct answer is B</b> (39 <math>\sigma</math> bonds, 3 <math>\pi</math> bonds)</p> <p><b>A</b> is incorrect because 15 is the number of C–C <math>\sigma</math> bonds</p> <p><b>C</b> is incorrect because 15 is the number of C–C <math>\sigma</math> bonds and 6 is twice the number of <math>\pi</math> bonds</p> <p><b>D</b> is incorrect because 6 is twice the number of <math>\pi</math> bonds</p>	<b>(1)</b>

Question Number	Answer	Mark
<b>17</b>	<div style="text-align: center;"> <math display="block">  \begin{array}{cccc}  \text{CH}_3 &amp; \text{CH}_3 &amp; \text{CH}_3 &amp; \text{CH}_3 \\    &amp;   &amp;   &amp;   \\  -\text{C} &amp; -\text{C} &amp; -\text{C} &amp; -\text{C}- \\    &amp;   &amp;   &amp;   \\  \text{H} &amp; \text{H} &amp; \text{H} &amp; \text{H}  \end{array}  </math> </div> <p><b>The only correct answer is D</b> ( )</p> <p><b>A</b> is incorrect because this polymer is made from propene, which does not have E/Z isomers</p> <p><b>B</b> is incorrect because this polymer is made from propene, which does not have E/Z isomers</p> <p><b>C</b> is incorrect because this polymer is made from 2-methylpropene, which does not have E/Z isomers</p>	<b>(1)</b>

**(Total for Section A = 20 marks)**

## Section B

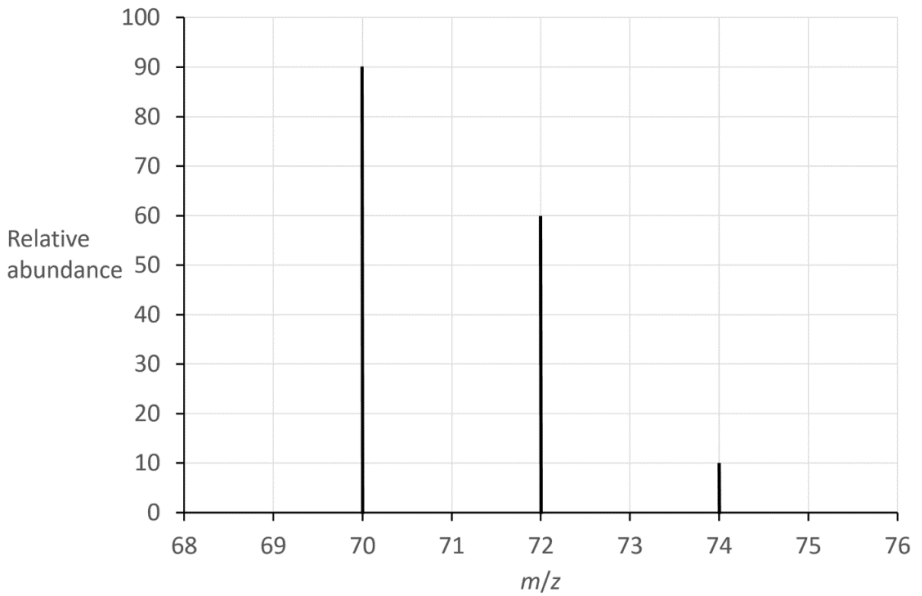

Question Number	Answer	Additional Guidance	Mark
<b>18(a)</b>	<ul style="list-style-type: none"> <li><math>1s^2 2s^2 2p^6 3s^2 3p^5</math></li> </ul>	Accept $2p_x^2 2p_y^2 2p_z^2$ for $2p^6$ etc  Ignore [Ne] for $1s^2 2s^2 2p^6$	<b>(1)</b>

Question Number	Answer	Additional Guidance	Mark
<b>18(b)</b>	<ul style="list-style-type: none"> <li>species and balancing <b>(1)</b></li> <li>state symbols <b>(1)</b></li> </ul>	Example of equation: $Cl(g) \rightarrow Cl^+(g) + e^-$ or $Cl(g) - e^- \rightarrow Cl^+(g)$  Do not award multiples  M2 dependent on M1 or neutral $Cl/Cl_2$ on one side of equation and charged $Cl^+/Cl_2^+/Cl^-/Cl_2^-$ on the other  Ignore state symbol on electron	<b>(2)</b>

Question Number	Answer	Additional Guidance	Mark
<b>18(c)</b>	<p>An explanation that makes reference to the following points:</p> <p>chlorine is higher</p> <p><b>and</b></p> <p>any <b>three</b> of the following qualifying statements:</p> <ul style="list-style-type: none"> <li>• (although) the nuclear charge / number of protons is lower <b>(1)</b></li> <li>• the (outer) electron is in a lower (principal) <b>energy</b> level / orbital of lower <b>energy</b> <b>(1)</b></li> <li>• the (outer) electron is closer to the nucleus / smaller (atomic) radius <b>(1)</b></li> <li>• (the outer electron experiences) less shielding <b>(1)</b></li> </ul>	<p><b>Accept reverse arguments throughout</b></p> <p>This can be implied through correct reference to attraction between nucleus and (outer) electron / amount of energy required to remove (outer) electron</p> <p>If bromine identified as higher, or it is not implied which element has the higher ionisation energy, penalise once only</p> <p>Ignore effective nuclear charge</p> <p>Allow (outer) electron is lower in <b>energy</b> Allow 3p lower in <b>energy</b> than 4p</p> <p>Allow just smaller atom Do not award smaller <b>ionic</b> radius Allow just fewer shells Ignore just fewer sub-shells / electrons</p> <p>Accept less repulsion from inner / core electrons Ignore just less repulsion between electrons Do not award less repulsion between paired electrons within an orbital</p>	<b>(3)</b>

Question Number	Answer	Additional Guidance	Mark
<b>18(d)</b>	<ul style="list-style-type: none"> <li>correct dot-and-cross diagram</li> </ul>	<p>Example of dot-and-cross diagram:</p> <pre>       ••   ××       ××   ×× •• Cl × Cl ×       ××   ××       ••   ••           </pre> <p>Allow any combination of dots, crosses or other symbols for electrons</p> <p>Allow indication of shells by overlapping circles</p> <p>Allow correctly filled inner shells</p>	<b>(1)</b>

Question Number	Answer	Additional Guidance	Mark
<b>18(e)</b>	<p>An explanation that makes reference to the following points: (chlorine is a simple molecule with)</p> <ul style="list-style-type: none"> <li>weak forces between the molecules</li> <li>little energy required to overcome these forces</li> </ul>	<p><b>(1)</b> Accept weak London / instantaneous dipole-induced dipole / van der Waals / VdW forces</p> <p>Allow weak intermolecular bonds / weak bonds between molecules</p> <p>Do not award if implied that intermolecular forces are within a chlorine molecule</p> <p><b>(1)</b> <b>M2 dependent on M1</b> Do not award just bond for forces unless clear that the bond is intermolecular</p> <p>Allow as relatively few electrons / small contact surface area</p>	<b>(2)</b>

Question Number	Answer	Additional Guidance	Mark
18(f)(i)	<ul style="list-style-type: none"> <li>lines at 70 and 72 and 74 <b>only</b> (1)</li> <li>relative abundances 90:60:10 (1) <b>respectively</b></li> </ul>	<p><b>Mark M1 and M2 independently</b></p>  <p>Accept relative abundances 100:67:11 / 54:36:6</p> <p>Allow relative abundances in ratio close to 9:6:1, eg 100:65:11 / 55:40:6</p> <p>If neither M1 nor M2 awarded, <b>two</b> peaks at correct <math>m/z</math> and in correct ratio scores (1), eg peaks at 70 and 74 in 9:1 ratio</p>	(2)

Question Number	Answer	Additional Guidance	Mark
<b>18(f)(ii)</b>	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• (peak is due to) <math>^{35}\text{Cl}-^{37}\text{Cl}</math> (molecular ion) <b>(1)</b></li> <li>• (with a charge of) <math>2+</math> <b>(1)</b></li> </ul>	<p><b>Mark M1 and M2 independently</b></p> <p>Allow any indication that peak is due to combination of (chlorine-)35 and (chlorine-)37, eg <math>(35+37)/2 = 36</math></p> <p>Do not award chlorine-36 isotope</p> <p>Allow (molecular ion has) lost two electrons</p> <p>Just <math>(^{35}\text{Cl}-^{37}\text{Cl})^{2+}</math> or <math>(35-37)^{2+}</math> scores (2)</p>	<b>(2)</b>

**(Total for Question 18 = 13 marks)**

Question Number	Answer	Additional Guidance	Mark
<b>19(a)(i)</b>	An answer that makes reference to the following points: <ul style="list-style-type: none"> <li>• (incorrectly plotted metal is) aluminium / Al <b>(1)</b></li> <li>• (incorrectly plotted non-metal is) argon / Ar <b>(1)</b></li> </ul>	Credit can be awarded from annotations to the graph  Ignore classification of elements as metallic / non-metallic, even if incorrect	<b>(2)</b>

Question Number	Answer	Additional Guidance	Mark
<b>19(a)(ii)</b>	An answer that makes reference to the following points: <ul style="list-style-type: none"> <li>• (silicon has a) giant (lattice/molecular structure) <b>and</b> covalent (bonds) <b>(1)</b></li> <li>• (many) strong (covalent) bonds (between silicon atoms) <b>or</b> each (silicon) atom bonded to four others <b>(1)</b></li> <li>• requiring a large amount of energy to break <b>(1)</b></li> </ul>	<b>Mark all points independently</b>  Accept macromolecular Ignore large molecule  Accept electrostatic attraction between nuclei and shared pair of electrons  Allow strong electrostatic attraction between (silicon) atoms Do not award strong ionic/metallic bonds Do not award strong intermolecular forces Ignore three bonds between (silicon) atoms Do not award any other elements / number of bonds	<b>(3)</b>

Question Number	Answer	Additional Guidance	Mark
<b>19(b)(i)</b>	<p>A description that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>(metals contain) delocalised electrons <b>(1)</b></li> <li>(which can) flow / move (freely through the structure when a potential difference is applied) <b>(1)</b></li> </ul>	<p>Allow delocalised electron Allow sea of electron(s) Ignore just free electrons Ignore charge carriers</p> <p><b>M2 dependent on M1</b></p> <p>Ignore reference to physical state</p>	<b>(2)</b>

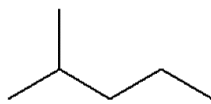

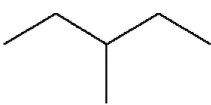

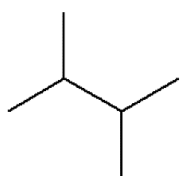

Question Number	Answer	Additional Guidance	Mark
<b>19(b)(ii)</b>	<p>A description that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>Aluminium has more delocalised electrons (than sodium per atom / ion)</li> </ul> <p><b>or</b></p> <p>Aluminium has three delocalised electrons whereas sodium has one (per atom / ion)</p>	<p>Accept reverse argument</p> <p>Allow just more delocalised electrons</p> <p>Do not award incorrect numbers of delocalised electrons (per atom / ion)</p>	<b>(1)</b>

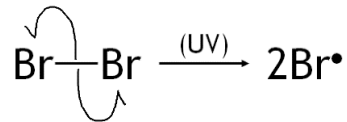

Question Number	Answer	Additional Guidance	Mark
<b>19(c)(i)</b>	<p>Dot-and-cross diagram showing the following:</p> <ul style="list-style-type: none"> <li>0 electrons on outer shell of aluminium and 8 electrons on outer shell of oxide <b>(1)</b></li> <li>two aluminium (ions) and three oxide (ions) <b>(1)</b></li> <li>3+ charge on aluminium ion and 2– charge on oxide ion <b>(1)</b></li> </ul>	<p>Example of dot-and-cross diagram:</p> $2[Al]^{3+} \quad 3[:\overset{\times\times}{O}^{\times\times}]^{2-}$ <p>M1 dependent on some indication of ionic structure  Allow 8 electrons on outer shell of Al  Allow correctly filled inner shells  Allow any combination of dots or crosses for electrons  Allow circles to indicate outer shells</p> <p>Accept any unambiguous indication of the correct number of ions  Allow any indication that formula is Al<sub>2</sub>O<sub>3</sub>, even if covalent dot-and-cross diagram shown</p> <p>Allow +3 and –2  Ignore missing square brackets</p> <p>If no other mark awarded, a correct dot-and-cross diagram for either an Al<sup>3+</sup> ion or O<sup>2–</sup> ion scores (1)</p>	<b>(3)</b>

Question Number	Answer	Additional Guidance	Mark
<b>19(c)(ii)</b>	<ul style="list-style-type: none"> <li><b>ions</b> must be mobile / free to move (to allow a current to flow)</li> </ul>	<p>Allow reverse argument (eg ions cannot move in the solid)</p> <p>Allow ions can flow</p> <p>Ignore just ions must be free</p> <p>Ignore charge carriers / charged particles</p> <p>Ignore reference to aqueous solutions</p> <p>Ignore just ions must be delocalised / dissociated</p> <p>Ignore reference to (lack of) delocalised electrons in the solid state</p> <p>Do not award reference to (presence of) delocalised electrons in the liquid/molten state</p>	<b>(1)</b>

**(Total for Question 19 = 12 marks)**

Question Number	Answer	Additional Guidance	Mark
<b>20(a)</b>	<p>Correct structures of:</p> <ul style="list-style-type: none"> <li>• 2-methylpentane <b>(1)</b></li> <li>• 3-methylpentane <b>(1)</b></li> <li>• 2,2-dimethylbutane <b>(1)</b></li> <li>• 2,3-dimethylbutane <b>(1)</b></li> </ul>	<p>Allow displayed, structural, skeletal formulae or any combination of these</p> <p>If more than one type of formula is given for an isomer all must be correct</p> <p>Penalise missing hydrogens from displayed formulae once only</p> <p>Ignore bond angles and bond lengths</p> <p>Ignore names even if incorrect</p> <p>Example of correct structures:</p> <div style="display: flex; align-items: center; margin-bottom: 10px;">  <div style="margin-left: 10px;">(2-methylpentane)</div> </div> <div style="display: flex; align-items: center; margin-bottom: 10px;">  <div style="margin-left: 10px;">(3-methylpentane)</div> </div> <div style="display: flex; align-items: center; margin-bottom: 10px;">  <div style="margin-left: 10px;">(2,2-dimethylbutane)</div> </div> <div style="display: flex; align-items: center;">  <div style="margin-left: 10px;">(2,3-dimethylbutane)</div> </div>	<b>(4)</b>

Question Number	Answer	Additional Guidance	Mark
<b>20(b)(i)</b>	Mechanism / equation showing: <ul style="list-style-type: none"> <li>homolytic fission of Br–Br bond with curly half-arrows <b>(1)</b></li> <li>(producing) two bromine radicals <b>(1)</b></li> </ul>	Example of mechanism:  <p>Allow curly half-arrows on same side of the bond Do not award arrows that are not half-headed</p> <p>Do not award missing •</p> <p>Use of Cl for Br in otherwise fully correct equation scores (1)</p>	<b>(2)</b>

Question Number	Answer	Additional Guidance	Mark
<b>20(b)(ii)</b>	<ul style="list-style-type: none"> <li><math>\text{C}_6\text{H}_{14} + \text{Br}\bullet \rightarrow \text{C}_6\text{H}_{13}\bullet + \text{HBr}</math> <b>(1)</b></li> <li><math>\text{C}_6\text{H}_{13}\bullet + \text{Br}_2 \rightarrow \text{C}_6\text{H}_{13}\text{Br} + \text{Br}\bullet</math> <b>(1)</b></li> </ul>	<p>Allow equations in either order</p> <p>Penalise missing • in (b)(i) and (b)(ii) once only</p>	<b>(2)</b>

Question Number	Answer	Additional Guidance	Mark
<b>20(b)(iii)</b>	<ul style="list-style-type: none"> <li><math>\text{C}_{12}\text{H}_{26}</math></li> </ul>	Allow $\text{H}_{26}\text{C}_{12}$	<b>(1)</b>

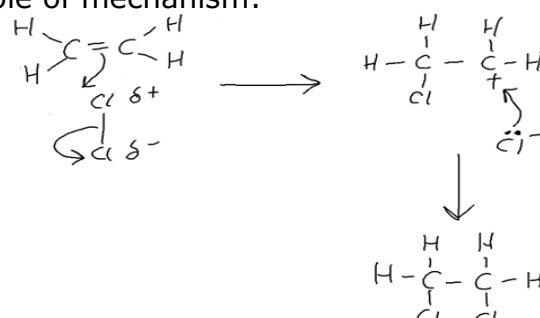

Question Number	Answer	Additional Guidance	Mark
<b>20(b)(iv)</b>	<ul style="list-style-type: none"> <li>evidence of C<sub>6</sub>Br<sub>14</sub> (identified as heaviest possible product) <b>(1)</b></li> <li>calculation of molar mass <b>(1)</b></li> <li>calculation of percentage by mass of bromine <b>(1)</b></li> </ul>	<p>Example of calculation:</p> <p>14 × 79.9 + 6 × 12.0 (= 1190.6)  TE on any compound of formula C<sub>6</sub>H<sub>(14-n)</sub>Br<sub>n</sub> (where 2 ≤ n &lt; 14) or C<sub>6</sub>Br<sub>12</sub></p> <p>%Br = (14 × 79.9) / (14 × 79.9 + 6 × 12.0) × 100  = 93.953 %  = 94.0 %</p> <p>TE on any compound of formula C<sub>6</sub>H<sub>(14-n)</sub>Br<sub>n</sub> or C<sub>6</sub>H<sub>(12-n)</sub>Br<sub>n</sub></p> <p>Allow use of 80 for relative atomic mass of bromine</p> <p>Ignore SF except 1 SF</p>	<b>(3)</b>

**(Total for Question 20 = 12 marks)**

Question Number	Answer	Additional Guidance	Mark
<b>21(a)</b>	<ul style="list-style-type: none"> <li>calculation of moles of ethene <b>(1)</b></li> <li>calculation of number of ethene molecules <b>(1)</b></li> </ul>	<p>Example of calculation:</p> $\text{mols} = \frac{1.50 \times 10^{14}}{28.0} = 5.3571 \times 10^{12}$ $\text{molecules} = 5.3571 \times 10^{12} \times 6.02 \times 10^{23} = 3.225 \times 10^{36}$ <p>TE on <b>moles</b> of ethene (calculated by dividing a mass by a molar mass)</p> <p>Ignore SF except 1 SF</p> <p>(3.225 / 3.23 / 3.2) <math>\times 10^{36}</math> scores (2)</p>	<b>(2)</b>

Question Number	Answer	Additional Guidance	Mark
<b>21(b)</b>	<p><b>M1:</b> conversion of temperature to K <b>(1)</b></p> <p><b>M2:</b> rearrangement of ideal gas equation <b>(1)</b></p> <p><b>M3:</b> evaluation to give moles of gas <b>(1)</b></p> <p><b>M4:</b> use of mixing ratio to calculate moles of ethene <b>(1)</b></p> <p><b>M5:</b> answer to 2 or 3SF – standalone <b>(1)</b></p>	<p>Example of calculation:</p> <p>(T = 21 + 273 =) 294 (K)</p> <p><math>n = \frac{pV}{RT}</math></p> <p>or</p> <p><math>n = \frac{1.01 \times 10^5 \times 220}{8.31 \times 294}</math></p> <p>n = 9094.9</p> <p>Ignore SF except 1 SF</p> <p>TE on M1</p> <p>No TE on incorrect volume</p> <p>moles = <math>\frac{100}{10^6} \times 9094.9</math></p> <p>= 0.90949</p> <p>Ignore SF except 1 SF</p> <p>TE on M3</p> <p>0.91 / 0.909 (moles)</p> <p>Do not award incorrect units</p> <p>Max (3) for calculations using 24 dm<sup>3</sup> mol<sup>-1</sup> as the molar gas volume (ie no M1 or M2)</p> <p>eg 0.92 scores (3), 0.916667 scores (2)</p>	

	<p>Alternative route to <b>M2</b>, <b>M3</b> and <b>M4</b></p> <ul style="list-style-type: none"> <li>• use of mixing ratio to calculate volume occupied by ethene <b>(1)</b></li> <li>• rearrangement of ideal gas equation <b>(1)</b></li> <li>• evaluation to give moles of ethene <b>(1)</b></li> </ul>	<p> <math>V = \frac{100}{10^6} \times 220</math>  <math>= 0.022 \text{ (m}^3\text{)}</math>            Do not award 0.02         </p> <p> <math>n = \frac{pV}{RT}</math>            or  <math>n = \frac{1.01 \times 10^5 \times 0.022}{8.31 \times 294}</math> </p> <p> <math>n = 0.90949</math>            Ignore SF except 1 SF            TE on M1            No TE on incorrect volume         </p>	<b>(5)</b>
