

## Mark Scheme (Results)

October 2019

Pearson Edexcel International Advanced Level  
In Physics (WPH11) Paper 01  
Mechanics and Materials

Question Number	Answer	Mark
1	<p><b>A is the correct answer</b></p> <p>B is not correct as both the micro and centi columns are incorrect.  C is not correct as the micro column is incorrect.  D is not correct as the centi column is incorrect.</p>	(1)
2	<p><b>B is the correct answer</b></p> <p>A is not correct as they are the units for force.  C is not correct as they are the units for momentum.  D is not correct as they are the units for power.</p>	(1)
3	<p><b>C is the correct answer</b></p> <p>A is not correct as diameter is being used for radius.  B is not correct as diameter is being used for radius.  D is not correct as the anomalous point (1.36) has not been ignored.</p>	(1)
4	<p><b>D is the correct answer</b></p> <p>This is because the area under a stress-strain graph is the work done per unit volume, but the area under the other 3 graphs represents work done.</p>	(1)
5	<p><b>B is the correct answer</b></p> <p>This is because the horizontal component is calculated using the equation <math>v_H = \sqrt{v^2 - v_V^2} = \sqrt{0.5^2 - 0.3^2} = 0.4</math></p>	(1)
6	<p><b>C is the correct answer</b></p> <p>This is because <math>W_c</math> should have been drawn in the centre of the cube.</p>	(1)
7	<p><b>C is the correct answer</b></p> <p>A is not correct as it ignores the weight of the table.  B is a correct equation since <math>R_c = W_c</math>, but it is not an instance of the third law.  D is a correct equation but it is not an instance of the third law.</p>	(1)
8	<p><b>C is the correct answer</b></p> <p>This is because the power needed is equal to the gravitational energy supplied per second (<math>mgh</math>) plus the kinetic energy given to the water per second (<math>\frac{1}{2}mv^2</math>).</p>	(1)
9	<p><b>C is the correct answer</b></p> <p>This is because <math>s = \frac{1}{2}gt^2</math>. So if in one unit of time the sphere has fallen one unit of distance, i.e. from image 1 to image 2, then in 2 units of time it will have fallen 4 units of distance, i.e. from image 1 to R.</p>	(1)
10	<p><b>B is the correct answer</b></p> <p>This is because the force is given by <math>F = kx</math>. So if <math>k</math> is doubled but <math>x</math> remains the same, <math>F</math> will be doubled.</p>	(1)

Question Number	Answer	Mark
<b>11</b>	<p>Horizontal force/component = <math>F\cos\theta</math> (1)</p> <p>Work done = <math>F_H \times s</math>  <b>Or</b> Work done = <math>F \cos\theta \times s</math> (1)</p> <p>As <math>\theta</math> increases, <math>\cos\theta / F_H / F\cos\theta</math> decreases so work done decreases.  <b>Or</b> As <math>\theta</math> decreases, <math>\cos\theta / F_H / F\cos\theta</math> increases so work done increases. (1)</p>	<b>(3)</b>
	<b>Total for question 11</b>	<b>3</b>

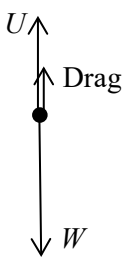

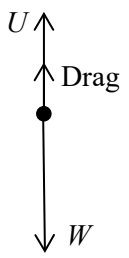

Question Number	Answer	Mark
<b>12(a)</b>	<p>Use of <math>(\Delta)E_{\text{grav}} = Fd</math> (1)</p> <p><b>Or</b> Use of <math>E_k = (\Delta)E_{\text{grav}}</math> <b>AND</b> Use of <math>v^2 = u^2 + 2as</math> with <math>a = -\frac{F}{m}</math> (1)</p> <p>Gradient = <math>\frac{mg}{F}</math> <b>Or</b> <math>\frac{d}{h} = \frac{mg}{F}</math> (1)</p> <p><u>Example of calculation</u></p> <p><math>mgh = Fd</math></p> <p><math>\frac{d}{h} = \frac{mg}{F}</math></p>	<b>(2)</b>
<b>12(b)</b>	<p><math>u = \sqrt{2gh}</math> (1)</p> <p>(Do not allow if suvat used with <math>a=g</math>)</p> <p>Use of <math>p = mv</math> (1)</p> <p><math>m_1u = (m_1 + m_2)v</math> (either seen or used)</p> <p>(Do not allow if there is an <math>m_2u</math> term unless <math>u=0</math>) (1)</p> <p>Some working leading to the correct expression <b>AND</b> statement that the student is correct. (1)</p> <p><u>Example of calculation</u></p> <p><math>mgh = \frac{1}{2}mv^2</math></p> <p><math>v = \sqrt{2gh}</math></p> <p><math>m\sqrt{2gh} = 2mv</math></p> <p><math>v = \frac{\sqrt{2gh}}{2} = \sqrt{\frac{gh}{2}}</math></p>	<b>(4)</b>
	<b>Total for question 12</b>	<b>6</b>

Question Number	Answer	Mark
13(a)	<p><b>Method 1 – Calculate the vertical displacement at 102 m.</b>  See (<math>u_v =</math>) <math>33\sin 28^\circ</math> <b>Or</b> 15 to 16 (<math>\text{m s}^{-1}</math>) <b>Or</b> (<math>u_h =</math>) <math>33\cos 28^\circ</math> <b>Or</b> 29 (<math>\text{m s}^{-1}</math>) (1)</p> <p>Use of <math>v = s/t</math> with <math>s = 102</math> m for the time of flight needed  <b>Or</b> Use of <math>v = s/t</math> with <math>s = 10</math> m for the extra time of flight needed (1)</p> <p>Use of equation(s) to determine the vertical displacement at the time calculated (1)</p> <p>Vertical displacement = <math>(-)</math> 5.8 to 6.0 m (1)</p> <p>Comparison with required height <b>AND</b> height is insufficient (1)  (Allow correct conclusion based on the calculated height)</p> <p><b>Method 2 – Calculate the horizontal displacement for a height of 4.5 m.</b>  See (<math>u_v =</math>) <math>33\sin 28^\circ</math> <b>Or</b> 15 to 16 (<math>\text{m s}^{-1}</math>) <b>Or</b> (<math>u_h =</math>) <math>33\cos 28^\circ</math> <b>Or</b> 29 (<math>\text{m s}^{-1}</math>) (1)</p> <p>Use of vertical equation(s) with <math>s = (-)4.5</math> m to determine the actual time of flight <b>Or</b> to determine the time beyond 92 m (1)</p> <p>Use of <math>v = s/t</math> to determine the range  <b>Or</b> Use of <math>v = s/t</math> for the extra displacement beyond 92 m (1)</p> <p>Horizontal displacement = 98 to 101 m <b>Or</b> extra displacement = 7.7 to 7.9 m (1)</p> <p>Comparison with required displacement <b>AND</b> height is insufficient  <b>Or</b> Comparison of extra displacement <b>AND</b> height is insufficient (1)  (Allow correct conclusion based on the calculated distance)</p> <p><b>Method 3 – Calculate the actual time of flight and that needed for 102 m</b>  See (<math>u_v =</math>) <math>33\sin 28^\circ</math> <b>Or</b> 15 to 16 (<math>\text{m s}^{-1}</math>) <b>Or</b> (<math>u_h =</math>) <math>33\cos 28^\circ</math> <b>Or</b> 29 (<math>\text{m s}^{-1}</math>) (1)</p> <p>Use of <math>v = s/t</math> with <math>s = 102</math> m for the time of flight needed (1)</p> <p>Use of vertical equation(s) to determine the actual time of flight (1)</p> <p>Time of flight needed = 3.5 s <b>AND</b> actual time of flight = 3.4 s (1) <b>(5)</b></p> <p>Time needed &gt; actual time <b>AND</b> height is insufficient (1)  (Allow correct conclusion based on the calculated times)</p> <p><b>Example of calculation</b>  <math>u_v = (33\text{ m s}^{-1}) \sin 28^\circ = 15.5 \text{ m s}^{-1}</math>  <math>u_h = (33 \text{ m s}^{-1}) \cos 28^\circ = 29.1 \text{ m s}^{-1}</math>  <math>t = \frac{102 \text{ m}}{29.1 \text{ m s}^{-1}}</math>  <math>t = 3.50 \text{ s}</math>  <math>s = (15.5 \text{ m s}^{-1} \times 3.50 \text{ s}) + (\frac{1}{2} \times (-9.81 \text{ N kg}^{-1}) \times (3.50 \text{ s})^2)</math>  <math>s = -5.87 \text{ m}</math></p>	

<b>*13(b)</b>	<p>This question assesses a student’s ability to show a coherent and logically structured answer with linkages and fully-sustained reasoning. Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning. The following table shows how the marks should be awarded for indicative content and lines of reasoning.</p> <table><tr><th>IC points</th><th>IC mark</th><th>Max linkage mark available</th><th>Max final mark</th></tr><tr><td>6</td><td>4</td><td>2</td><td>6</td></tr><tr><td>5</td><td>3</td><td>2</td><td>5</td></tr><tr><td>4</td><td>3</td><td>1</td><td>4</td></tr><tr><td>3</td><td>2</td><td>1</td><td>3</td></tr><tr><td>2</td><td>2</td><td>0</td><td>2</td></tr><tr><td>1</td><td>1</td><td>0</td><td>1</td></tr><tr><td>0</td><td>0</td><td>0</td><td>0</td></tr></table> <table><tr><td></td><td>Number of marks awarded for structure of answer and sustained line of reasoning</td></tr><tr><td>Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout</td><td>2</td></tr><tr><td>Answer is partially structured with some linkages and lines of reasoning</td><td>1</td></tr><tr><td>Answer has no linkages between points and is unstructured</td><td>0</td></tr></table> <p><b>Indicative content</b> With air resistance: Vertical motion</p> <ul style="list-style-type: none"><li>When moving up weight and (vertical component of) air resistance are acting. <b>Or</b> When moving up air resistance increases the resultant force.</li><li>(When moving up,) downwards/vertical acceleration/deceleration increases <b>Or</b> upward velocity decreases more quickly.</li><li>(So maximum) height is lower.</li></ul> <p>Horizontal motion</p> <ul style="list-style-type: none"><li>There is a horizontal deceleration/force (due to air resistance).</li><li>(So the average) horizontal velocity is lower.</li><li>The (ball travels a) shorter (total) distance.</li></ul>	IC points	IC mark	Max linkage mark available	Max final mark	6	4	2	6	5	3	2	5	4	3	1	4	3	2	1	3	2	2	0	2	1	1	0	1	0	0	0	0		Number of marks awarded for structure of answer and sustained line of reasoning	Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout	2	Answer is partially structured with some linkages and lines of reasoning	1	Answer has no linkages between points and is unstructured	0
