Candidates must have: Scientific calculator Ruler			Total Marks

Instructions

- Use **black** ink or **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- You will be assessed on your ability to organise and present information, ideas, descriptions and arguments clearly and logically, including your use of grammar, punctuation and spelling.
- There is a Periodic Table printed on the back cover of this paper.

Advice

- Read each question carefully before you start to answer it.
- Show all your working in calculations and include units where appropriate.
- Check your answers if you have time at the end.

1/1/1/1/1/1/

SECTION A

Answer ALL the questions in this section.

You should aim to spend no more than 20 minutes on this section.

For each question, select one answer from A to D and put a cross in the box ☐.
If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☐.

- 1** How many protons, neutrons and electrons are in a $^{37}\text{Cl}^-$ ion?

	Protons	Neutrons	Electrons
<input type="checkbox"/> A	17	20	16
<input type="checkbox"/> B	17	20	17
<input type="checkbox"/> C	17	20	18
<input type="checkbox"/> D	20	17	21

(Total for Question 1 = 1 mark)

- 2** A sample of an element **X** contains only the isotopes shown.

Isotope	Percentage abundance
^{58}X	68.077
^{60}X	26.223
^{61}X	1.140
^{62}X	3.634
^{64}X	0.926

What is the relative atomic mass of element **X** to **three** decimal places in this sample?

- ☐ **A** 58.760
- ☐ **B** 58.8
- ☐ **C** 59.4
- ☐ **D** 59.440

(Total for Question 2 = 1 mark)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

3 How many **orbitals** are there, in total, in the first three quantum shells of an atom?

- ☐ A 3
☐ B 6
☐ C 9
☐ D 14

(Total for Question 3 = 1 mark)

4 Which element is in the **p-block** and has atoms containing **two** unpaired electrons in the ground state?

- ☐ A lithium
☐ B carbon
☐ C fluorine
☐ D titanium

(Total for Question 4 = 1 mark)

5 The first five ionisation energies of an element, in kJ mol^{-1} , are

578 1817 2745 11 578 14 831

This element could be

- ☐ A sodium
☐ B magnesium
☐ C aluminium
☐ D silicon

(Total for Question 5 = 1 mark)

6 What is the relative formula mass of hydrated barium hydroxide, $\text{Ba(OH)}_2 \cdot 8\text{H}_2\text{O}$?

[A_r values: Ba = 137.3, O = 16.0, H = 1.0]

- ☐ A 171.3
☐ B 203.3
☐ C 299.3
☐ D 315.3

(Total for Question 6 = 1 mark)

- 7 An 11.0 g sample of anhydrous sodium sulfate, Na_2SO_4 , is dissolved in deionised water to form 70 cm^3 of solution.

What is the concentration, in mol dm^{-3} , of Na_2SO_4 in the aqueous solution formed?

[M_r value: $\text{Na}_2\text{SO}_4 = 142.1$]

- ☐ A 0.0011
- ☐ B 0.90
- ☐ C 1.1
- ☐ D 900

(Total for Question 7 = 1 mark)

- 8 Which of these ionic compounds would be expected to have the **highest** melting temperature?

- ☐ A NaF
- ☐ B MgO
- ☐ C KCl
- ☐ D CaS

(Total for Question 8 = 1 mark)

- 9 Which of these compounds has the **greatest** covalent character?

- ☐ A MgF_2
- ☐ B MgI_2
- ☐ C BaF_2
- ☐ D BaI_2

(Total for Question 9 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

10 Barium chloride reacts with sodium sulfate:

[M_r values: $\text{BaCl}_2 = 208.3$, $\text{Na}_2\text{SO}_4 = 142.1$, $\text{BaSO}_4 = 233.4$, $\text{NaCl} = 58.5$]

(a) What would you **see** when this reaction is carried out?

(1)

- ☐ A blue solution turns colourless
- ☐ B effervescence
- ☐ C no visible change
- ☐ D white precipitate

(b) What is the ionic equation for this reaction?

(1)

- ☐ A $\text{Ba}^+(\text{aq}) + \text{SO}_4^-(\text{aq}) \rightarrow \text{BaSO}_4(\text{s})$
- ☐ B $\text{Na}^+(\text{aq}) + \text{Cl}^-(\text{aq}) \rightarrow \text{NaCl}(\text{aq})$
- ☐ C $\text{Ba}^{2+}(\text{aq}) + \text{SO}_4^{2-}(\text{aq}) \rightarrow \text{BaSO}_4(\text{s})$
- ☐ D $\text{Ba}^{2+}(\text{aq}) + \text{SO}_4^{2-}(\text{aq}) + \text{Na}^+(\text{aq}) + \text{Cl}^-(\text{aq}) \rightarrow \text{BaSO}_4(\text{s}) + \text{NaCl}(\text{aq})$

(c) What is the maximum mass of BaSO_4 that could be produced from 0.500 g of BaCl_2 in this reaction?

(1)

- ☐ A 0.446 g
- ☐ B 0.500 g
- ☐ C 0.560 g
- ☐ D 0.821 g

(d) What is the atom economy (by mass) for the formation of BaSO_4 in this reaction?

(1)

- ☐ A 33.3%
- ☐ B 62.2%
- ☐ C 66.6%
- ☐ D 80.0%

(Total for Question 10 = 4 marks)

11 Which of these forms of carbon does **not** contain delocalised electrons?

- ☐ A diamond
- ☐ B C₆₀ fullerene
- ☐ C graphene
- ☐ D graphite

(Total for Question 11 = 1 mark)

12 Which of these molecules is polar?

- ☐ A OF₂
- ☐ B BF₃
- ☐ C CF₄
- ☐ D PF₅

(Total for Question 12 = 1 mark)

13 Which species has its correct shape and bond angle shown?

	Species	Shape	Bond angle
<input type="checkbox"/> A	CH ₃ ⁺	trigonal planar	120°
<input type="checkbox"/> B	NH ₃	pyramidal	109.5°
<input type="checkbox"/> C	NH ₄ ⁺	square planar	90°
<input type="checkbox"/> D	H ₂ O	linear	180°

(Total for Question 13 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

14 Some equations for reactions used in reforming crude oil fractions are shown.

Which equation is **not** balanced?

(Total for Question 14 = 1 mark)

15 A pure alkane fuel is burned in air.

Which substance is **not** a possible combustion product?

(Total for Question 15 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

16 What is the number of σ bonds and π bonds in one molecule of this compound?

- ☐ A
- ☐ B
- ☐ C
- ☐ D

σ bonds	π bonds
15	3
39	3
15	6
39	6

(Total for Question 16 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

17 The polymers shown are all made from single monomers.

Which polymer is made from a monomer that has geometric isomers?

(Total for Question 17 = 1 mark)

TOTAL FOR SECTION A = 20 MARKS

SECTION B

Answer ALL the questions.

Write your answers in the spaces provided.

18 This question is about the element chlorine.

- (a) Give the electronic configuration, using the s, p, d notation, for a chlorine atom in the ground state.

(1)

- (b) Write an equation for the **first** ionisation energy of chlorine. Include state symbols.

(2)

- (c) Explain the difference in the **first** ionisation energies of chlorine and bromine.

(3)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(d) Chlorine occurs naturally as a diatomic molecule.

Draw a dot-and-cross diagram to show the bonding in a molecule of chlorine.
Show outer shell electrons only.

(1)

(e) Chlorine is a gas at room temperature and pressure.

Explain why chlorine has a low boiling temperature.

(2)

.....

.....

.....

.....

.....

(f) Chlorine has two stable isotopes. The isotopes have mass numbers 35 and 37, with relative abundance in the ratio 3:1.

- (i) Complete the mass spectrum for a sample of chlorine gas to show the expected molecular ion peaks due to Cl_2^+ .

(2)

- (ii) Suggest why there could be a small peak at $m/z = 36$ in the mass spectrum of chlorine gas.

(2)

.....

.....

.....

.....

(Total for Question 18 = 13 marks)

19 This question is about the bonding, structure and properties of the elements in Period 3 of the Periodic Table and their compounds.

(a) A student plotted a graph to show the melting temperatures of the elements in Period 3.

(i) The student incorrectly plotted **two** values: one for a metal and one for a non-metal.

Identify these elements, by name or formula.

(2)

.....

.....

- (ii) Explain, with reference to structure and bonding, why silicon has a very high melting temperature.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

- (b) Aluminium has the greatest electrical conductivity of the Period 3 elements.

- (i) Describe how metals conduct electricity.

(2)

.....

.....

.....

.....

- (ii) Give a possible reason why aluminium has a higher electrical conductivity than sodium.

(1)

.....

.....

.....

(c) Aluminium is extracted by the electrolysis of aluminium oxide in the liquid state.

- (i) Draw a dot-and-cross diagram to show the bonding in aluminium oxide.
Show outer shell electrons only.

(3)

- (ii) Give a reason why aluminium oxide must be in the liquid state before electrolysis can occur.

(1)

(Total for Question 19 = 12 marks)

20 This question is about hexane, C_6H_{14} .

(a) The skeletal formula of hexane is

Draw the four structural isomers of hexane in the boxes.

(4)

Isomer 1	Isomer 2
Isomer 3	Isomer 4

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(b) Hexane reacts with bromine in the presence of ultraviolet radiation to form a mixture of bromoalkanes.

(i) Draw the initiation step of this reaction, using curly half-arrows.

(2)

(ii) Write equations for two propagation steps to show how $\text{C}_6\text{H}_{13}\text{Br}$ is formed. Curly arrows are **not** required.

(2)

(iii) Give the **molecular** formula of an alkane formed in a termination step in this reaction.

(1)

(iv) Calculate the percentage by mass of bromine in the heaviest molecule containing **six** carbon atoms that could form when hexane reacts with a **large excess** of bromine.

[A_r values: C = 12.0, Br = 79.9]

(3)

(Total for Question 20 = 12 marks)

21 This question is about ethene, C_2H_4 .

- (a) The global production of ethene is about 150 million tonnes per year.

Calculate the number of **molecules** in 150 million tonnes of ethene.

[1 tonne = 1000 kg Avogadro constant = $6.02 \times 10^{23} \text{ mol}^{-1}$]

(2)

- (b) Ethene is used commercially to speed up the ripening of bananas.
Ethene levels of 100 parts per million (ppm) are used in ripening rooms.

Calculate the amount, in **moles**, of ethene in a ripening room of volume 220 m^3 at a temperature of 21°C and pressure of $1.01 \times 10^5 \text{ Pa}$.

Give your answer to an appropriate number of significant figures.

[$pV = nRT$ $R = 8.31 \text{ J mol}^{-1} \text{ K}^{-1}$]

(5)

(c) Ethene and chlorine react to form 1,2-dichloroethane.

- (i) Draw the mechanism for the reaction between ethene and chlorine to form 1,2-dichloroethane.

Include curly arrows, and relevant lone pairs and dipoles.

(4)

- (ii) One hazard symbol for 1,2-dichloroethane is shown.

By identifying this hazard, give **one** way of minimising the risk when working with 1,2-dichloroethane in a laboratory.

Assume the use of safety goggles and a laboratory coat.

(2)

.....

.....

.....

.....

(d) Ethene reacts with oxygen, O_2 , in the presence of a silver catalyst, to form compound **Y** as the only product.

- (i) When 10.0 g of ethene reacts completely with oxygen, the mass of compound **Y** formed is 15.7 g.

Calculate the empirical formula of **Y**.

You **must** show your working.

[A_r values: H = 1.0, C = 12.0, O = 16.0]

(2)

- (ii) Compound **Y** reacts with water to form compound **Z**.
Compound **Z** is also produced in the reaction between ethene and acidified potassium manganate(VII).

Give the **displayed** formula of compound **Z**.

(1)

(e) Ethene reacts with buta-1,3-diene to form cyclohexene as the only product.

Complete the equation for the formation of cyclohexene from ethene and buta-1,3-diene using **skeletal** formulae.

(1)

(f) Two reactions of cyclohexene are shown.

(i) Classify the type of reaction occurring in Reaction 1.

(1)

(ii) Give the reagents and conditions needed for Reaction 2.

(2)

(iii) Cyclohexanol is the product of Reaction 2.

Bond angle $a = 109.5^\circ$

Explain why bond angle b is smaller than bond angle a .
Include the expected value for bond angle b in your answer.

(3)

(Total for Question 21 = 23 marks)

TOTAL FOR SECTION B = 60 MARKS
TOTAL FOR PAPER = 80 MARKS
