

Mark Scheme (Results)

October 2020

Pearson Edexcel International Advanced Level
In Chemistry (WCH14)
Paper 1: Rates, Equilibria and Further Organic
Chemistry

Section A (multiple choice)

Question Number	Answer	Mark
1	<p>The only correct answer is C (quenching and titrating with acid)</p> <p><i>A is incorrect because bromine is coloured</i></p> <p><i>B is incorrect because ions are produced during the reaction</i></p> <p><i>D is incorrect because carbon dioxide is a gas produced in the reaction</i></p>	(1)

Question Number	Answer	Mark
2	<p>The only correct answer is B (0 2)</p> <p><i>A is incorrect because experiments 1 and 2 show the order for Z is 2</i></p> <p><i>C is incorrect because in experiments 3 and 2 doubling the concentration of Y results in no change in the rate, so Y is order 0.</i></p> <p><i>D is incorrect because in experiments 1 and 3 doubling the concentration of Z results in 4x the rate, so halving the concentration of Y makes no difference to rate so is order 0.</i></p>	(1)

Question Number	Answer	Mark
3	<p>The only correct answer is B (460 mins)</p> <p><i>A is incorrect because this value would be misreading the scale of the graph</i></p> <p><i>C is incorrect because this is the time to get half way to the final concentration on the graph</i></p> <p><i>D is incorrect because this is half the time of the reaction on the graph</i></p>	(1)

Question Number	Answer	Mark
4 (a)	<p>The only correct answer is A (the units for the rate constant are $\text{dm}^3 \text{mol}^{-1} \text{s}^{-1}$)</p> <p><i>B is incorrect because the reaction is second order overall</i></p> <p><i>C is not correct because the units of rate are always $\text{mol dm}^{-3} \text{s}^{-1}$</i></p> <p><i>D is not correct because the rate would double as iodine is zero order</i></p>	(1)

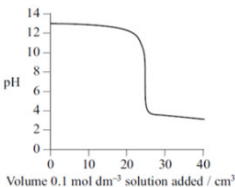

Question Number	Answer	Mark
4 (b)	<p>The only correct answer is D (the rate is unchanged when the hydrogen ion concentration is doubled)</p> <p><i>A is incorrect because the rate of reaction does increase with temperature</i></p> <p><i>B is incorrect because the rate constant depends on the temperature and increases as temperature rises</i></p> <p><i>C is not correct because sodium hydroxide would neutralise some of the $[\text{H}^+]$ catalyst so change rate</i></p>	(1)

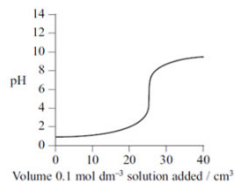

Question Number	Answer	Mark
5	<p>The only correct answer is D (2-bromo-2-methylpropane)</p> <p><i>A is incorrect because this is a primary bromoalkane and RBr is most likely to be tertiary</i></p> <p><i>B is incorrect because this is a secondary bromoalkane and RBr is most likely to be tertiary</i></p> <p><i>C is incorrect because this is a primary bromoalkane and RBr is most likely to be tertiary</i></p>	(1)

Question Number	Answer	Mark
6	<p>The only correct answer is B ($\Delta S_{\text{surroundings}}$ is positive)</p> <p><i>A is incorrect because ΔH is negative for an exothermic reaction</i></p> <p><i>C is incorrect because ΔS_{system} is positive as a gas is being formed</i></p> <p><i>D is incorrect because as both ΔS_{system} and $\Delta S_{\text{surroundings}}$ are positive so ΔS_{total} will be positive</i></p>	(1)

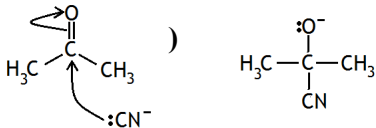

Question Number	Answer	Mark
7	<p>The only correct answer is A ($K_c = (K_c')^2$)</p> <p><i>B is incorrect because this is not true as K_c' must be squared</i></p> <p><i>C is incorrect because this is not true as K_c' must be squared not multiplied by 2</i></p> <p><i>D is incorrect because this is not true as K_c' must be squared not square rooted</i></p>	(1)

Question Number	Answer	Mark
8	<p>The only correct answer is B (4.47)</p> <p><i>A is incorrect because this answer assumes the concentration of ethanoate ion = concentration of hydrogen ion (as it would be in a weak acid calculation)</i></p> <p><i>C is incorrect because this answer is $-\log K_a$ so does not consider the concentrations</i></p> <p><i>D is incorrect because this answer is $-\log(2xK_a)$ which has the concentrations upside down</i></p>	(1)

Question Number	Answer	Mark
9 (a)	<p>The only correct answer is D</p>  <p><i>A is incorrect because, if the graph starts or finishes at a pH of about 1, a strong acid is present</i></p> <p><i>B is incorrect because, if the graph starts or finishes at a pH of about 1, a strong acid is present</i></p> <p><i>C is incorrect because, if the graph starts or finishes at a pH of about 1, a strong acid is present</i></p>	(1)

Question Number	Answer	Mark
9 (b)	<p>The only correct answer is C</p>  <p><i>A is incorrect because the mid-point of the vertical portion of the graph is at pH = 7</i></p> <p><i>B is incorrect because the mid-point of the vertical portion of the graph is at pH = 7</i></p> <p><i>D is incorrect because the mid-point of the vertical portion of the graph is at pH > 7</i></p>	(1)

Question Number	Answer	Mark
9 (c)	<p>The only correct answer is A</p> <p><i>B is incorrect because the range of colour change for bromothymol blue (6.0 – 7.6) is not within the vertical portion of the graph</i></p> <p><i>C is incorrect because the range of colour change for phenol red (6.8 – 8.4) is not within the vertical portion of the graph</i></p> <p><i>D is incorrect because the range of colour change for thymol blue (acid) (1.2 – 2.8) is not within the vertical portion of the graph</i></p>	(1)

Question Number	Answer	Mark
10	<p>The only correct answer is A ()</p> <p><i>B is incorrect because the arrow from the C=O should go to O not C</i></p> <p><i>C is incorrect because the dipole for the C=O has been reversed</i></p> <p><i>D is incorrect because the arrow should go from :CN⁻ not to it</i></p>	(1)

Question Number	Answer	Mark
11	<p>The only correct answer is B (CHI_3)</p> <p><i>A is incorrect because there should be 3I not 3H attached to the C</i></p> <p><i>C is incorrect because this is the product of the reaction between iodine and propanone in acidic conditions</i></p> <p><i>D is incorrect because this is an intermediate during the reaction between iodine and propanone</i></p>	(1)

Question Number	Answer	Mark
12	<p>The only correct answer is C (CH_3CONH_2)</p> <p><i>A is incorrect because this is formed by the initial reaction between the two</i></p> <p><i>B is incorrect because this is formed by the reaction between HCl and methylamine</i></p> <p><i>D is incorrect because this is the organic product of the reaction between the two</i></p>	(1)

Question Number	Answer	Mark
13	<p>The only correct answer is C (Ethyl ethanoate, $\text{CH}_3\text{COOCH}_2\text{CH}_3$)</p> <p><i>A is incorrect because this has a percentage of 40%</i></p> <p><i>B is incorrect because this is isomeric to D so cannot be the answer</i></p> <p><i>D is incorrect because this is isomeric to B so cannot be the answer</i></p>	(1)

Question Number	Answer	Mark
14	<p>The only correct answer is B (a carboxylic acid)</p> <p><i>A is incorrect because this will not react with magnesium</i></p> <p><i>C is incorrect because this will not react with magnesium</i></p> <p><i>D is incorrect because this will not react with lithium tetrahydridoaluminate(III) or magnesium</i></p>	(1)

Question Number	Answer	Mark
15 (a)	<p>The only correct answer is C (add 2,4-dinitrophenylhydrazine (Brady's reagent) to each compound)</p> <p><i>A is incorrect because neither would react</i></p> <p><i>B is incorrect because neither would react</i></p> <p><i>D is incorrect because neither would react</i></p>	(1)

Question Number	Answer	Mark
15 (b)	<p>The only correct answer is B (warm each compound with acidified potassium dichromate(VI) solution)</p> <p><i>A is incorrect because neither would react</i></p> <p><i>C is incorrect because neither would react</i></p> <p><i>D is incorrect because neither would react</i></p>	(1)

Question Number	Answer	Mark
15 (c)	<p>The only correct answer is D (add a few drops of each compound, drop by drop, to water)</p> <p><i>A is incorrect because as butanal would react but 2-methylpropan-2-ol would not</i></p> <p><i>B is incorrect because as butanal would react but 2-methylpropan-2-ol would not</i></p> <p><i>C is incorrect because as butanal would react but 2-methylpropan-2-ol would not</i></p>	(1)

(Total for Section A = 20 marks)

Section B

Question Number	Answer	Additional guidance	Mark
	<ul style="list-style-type: none"> • Top line • Bottom line • Middle 2 lines 	<p>Penalise missing or incorrect state symbol once only Penalise lack of electrons or too few electrons once only Penalise the writing of the change for each step e.g. $\text{Ca(s)} \rightarrow \text{Ca(g)}$ once only. Assume that the other substance is unchanged</p> <p>(1) $\text{Ca}^{2+}(\text{g}) + 2\text{Cl}(\text{g}) + 2\text{e}^{(-)}$</p> <p>(1) Either $\text{Ca(s)} + 2\text{Cl}(\text{g})$ or $\text{Ca(g)} + \text{Cl}_2(\text{g})$</p> <p>(2) any two of $\text{Ca}^{+}(\text{g}) + 2\text{Cl}(\text{g}) + \text{e}^{(-)}$ or $\text{Ca(g)} + 2\text{Cl}(\text{g})$ or $\text{Ca}^{+}(\text{g}) + \text{Cl}_2(\text{g}) + \text{e}^{(-)}$ or $\text{Ca}^{2+}(\text{g}) + \text{Cl}_2(\text{g}) + 2\text{e}^{(-)}$</p> <p>Allow TE from one line to the next, so penalising any error once only.</p>	(4)

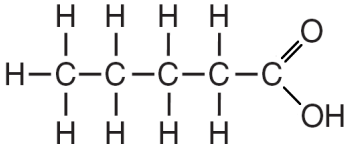

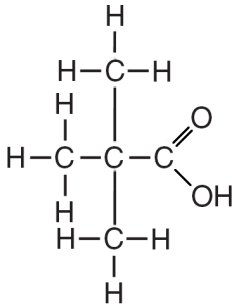

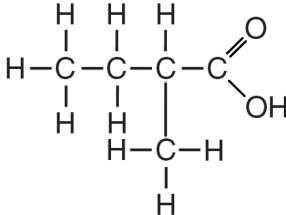

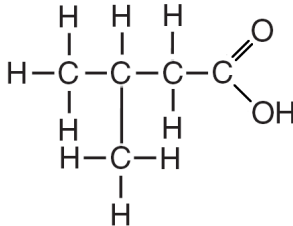

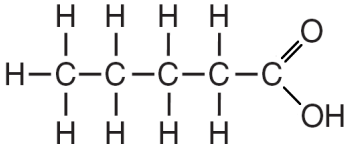

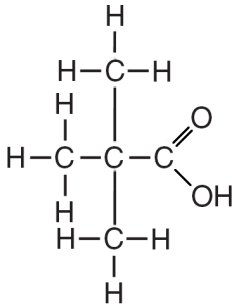

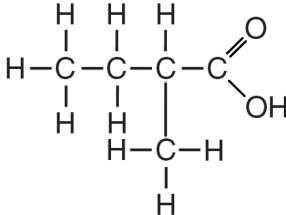

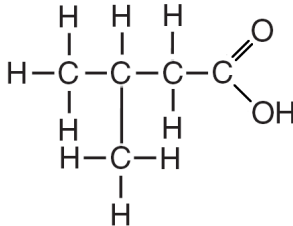

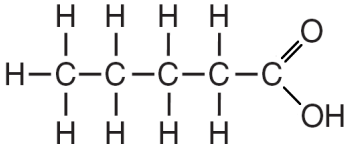

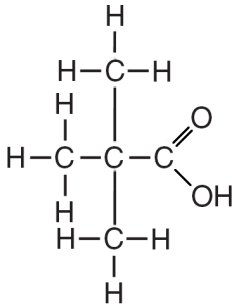

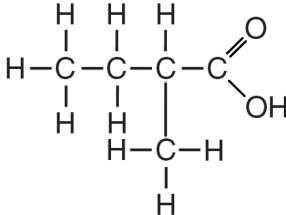

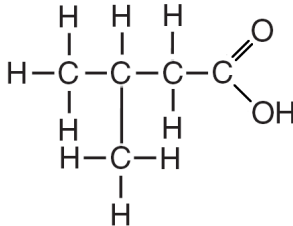

Question Number	Answer	Additional guidance	Mark
16(a)(ii)	<ul style="list-style-type: none"> An equation linking enthalpy changes with correct signs and / or values (1) Multiplies atomisation of chlorine OR electron affinity of chlorine by 2 (1) Calculates final value of second ionisation energy of calcium with sign (1) 	<p>Example of calculation: $\Delta H_1 = \Delta H_2 + \Delta H_3 + \Delta H_4 + \Delta H_5 + \Delta H_6 + \Delta H_7$ OR $\Delta H_6 + \Delta H_7 = \Delta H_1 - \Delta H_2 - \Delta H_3 - \Delta H_4 - \Delta H_5$ OR $\Delta H_5 = -\Delta H_4 - \Delta H_3 - \Delta H_2 + \Delta H_1 - \Delta H_7 - \Delta H_6$ OR $\Delta H_5 = -590.0 - 178.2 - ((2 \times) 121.7) + -795.8 - -2258 - ((2 \times) -348.8)$ Similar numerical expressions of the other equations also score</p> <p>2 x 121.7 / 243.4 / 243 OR 2 x -348.8 / -697.6 / -698</p> <p>(+) 1148.2 / (+) 1148 / (+) 1150 (kJ mol⁻¹)</p> <p>ALLOW TE on all stages of calculation for max 2. Correct answer with no working scores (3) Ignore SF except 1 SF</p> <p>Common incorrect answers include: - 1148.2 / - 1148 / - 1150 (kJ mol⁻¹) scores (2) (+)799.4 / (+)799 / (+)780 (kJ mol⁻¹) (1 x 348.8) scores (2) (+)1269.9 / (+)1270 (kJ mol⁻¹) (1 x 121.7) scores (2) (+)921.1 / (+)921 / (+) 920 (kJ mol⁻¹) (1 x 348.8 and 121.7) scores (1) (+)2512.7 (Changing sign of $\Delta H_6 + \Delta H_7$ and no 2 x) scores (0)</p>	(3)

Question Number	Answer	Additional guidance	Mark
16(b)	<p>An explanation that makes reference to the following points:</p> <p>EITHER</p> <ul style="list-style-type: none"> Bonding is partially covalent / not purely ionic / has covalent character (1) Ca^{2+} ion is small (and highly charged) (1) Leading to polarisation / distortion in the electron cloud of the chloride / Cl^- (ion) / anion (1) <p>OR</p> <ul style="list-style-type: none"> Bonding is almost purely ionic / slightly covalent (1) Ca^{2+} is not sufficiently small (and highly charged) (1) To polarise the chloride / Cl^- (ion) very much / to distort the electron cloud of the chloride / Cl^- (ion) (1) 	<p>Penalise the use of calcium and / or chlorine (atom) once only Ignore descriptions of possible macroscopic features of covalent character such as structures etc.</p> <p>Allow calcium ion is small and highly charged / has a high charge density</p> <p>Do not award chlorine Do not award distortion by calcium / calcium atom</p> <p>Allow virtually 100% ionic Do not award purely ionic / 100 % ionic</p> <p>calcium ion is not sufficiently small and highly charged / has too small a charge density Do not award calcium / calcium atom is not sufficiently small / charged</p> <p>Allow chloride (ion) is not very polarised / is not very polarisable</p> <p>Do not award chlorine Do not award chloride is not polarised / polarisable</p>	(3)

Question Number	Answer	Additional guidance	Mark
16(c)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> • (on descending the group) lattice enthalpy becomes less exothermic (1) • as the radius of metal ion / M^{2+} ion / cation increases (and charge on ions remains the same / 2+) (1) • (down group) weaker forces of attraction between ions (1) 	<p>Penalise mention specifically of atoms instead of ions once only</p> <p>Penalise mention specifically of molecules once only</p> <p>Award reverse arguments if clearly referring to ascending the group</p> <p>Ignore discussion of polarising power</p> <p>Allow less negative / less energy is released</p> <p>Ignore increases / decreases</p> <p>Allow “size” instead of “radius”</p> <p>Ignore atomic radius increases</p> <p>Allow correct formulae of cations</p> <p>Do not award just “charge density decreases” without explanation</p> <p>Allow less attraction to chloride ion</p> <p>Do not award just “weaker bonds” or “weaker bonding”</p>	(3)

Question Number	Answer	Additional guidance	Mark
16(d)	<ul style="list-style-type: none"> An expression linking enthalpy of solution, lattice enthalpy and hydration enthalpies (1) Value of $\Delta_{\text{sol}}H$ (1) 	<p>Example of calculation $\Delta_{\text{sol}}H = -\Delta_{\text{latt}}H + (\Sigma)\Delta_{\text{hyd}}H$ OR $\Delta_{\text{sol}}H = -(-2258) + (-1650) + (2 \times -364)$</p> <p>-120 (kJ mol⁻¹)</p> <p>Correct answer with no working scores (2)</p> <p>(+)120 / (+)244 / -4636 (kJ mol⁻¹) scores (1)</p>	(2)

(Total for Question 16 = 15 marks)

Section C

Question Number	Answer	Additional guidance	Mark
19(a)(i)	<ul style="list-style-type: none"> Gives expression for $\Delta S^\circ_{\text{system}}$ (1) Calculation of value of $\Delta S^\circ_{\text{system}}$ (1) 	<p>Example of calculation</p> $\Delta S^\circ_{\text{system}} = (2 \times 192.3) - 191.6 - (3 \times 130.6)$ $= -198.8 / -199 \text{ (J K}^{-1} \text{ mol}^{-1}\text{)}$ <p>Ignore SF except 1 SF but award –200 (2 SF)</p> <p>Award –0.198.8 / –0.199 / –0.20 kJ K^{–1} mol^{–1} but units must be given</p> <p>Allow kJ mol^{–1} K^{–1}</p> <p>Do not award incorrect units</p> <p>Correct answer with no working scores (2)</p> <p>A positive version of the acceptable answer scores (1)</p> <p>–0.2 kJ K^{–1} mol^{–1} scores (1)</p> <p>Allow TE on an incorrect expression which contains either (2 x 192.3) or (3 x 130.6)</p>	(2)

Question Number	Answer	Additional guidance	Mark
19(a)(ii)	<p>An explanation that makes reference to the following points:</p> <p>(Yes because....)</p> <ul style="list-style-type: none"> Disorder / number of ways of distributing energy quanta decreases (1) As number of molecules / moles / particles (of gas) decreases (1) 	<p>Allow just “entropy decreases” Do not award just ‘ΔS_{system} is negative’</p> <p>Allow 4 moles gives 2 moles / 4 molecules gives 2 molecules</p> <p>Do not award 2 molecules gives 1 molecule</p> <p>Allow TE on positive result in (a)(i), but must state answer is unexpected.</p> <p>Ignore no changes of states</p> <p>If (a)(i) is positive and no statement about expectation is made max (1)</p> <p>Positive answer expected scores (0)</p>	(2)

Question Number	Answer	Additional guidance	Mark
19(a)(iii)	<ul style="list-style-type: none"> • Use of $\Delta S_{\text{surroundings}} = -\Delta H/T$ (1) • Calculates $\Delta S_{\text{surroundings}}$ (1) 	<p>Example of calculation:</p> $\Delta S_{\text{surroundings}} = -(-110.2 \times 1000) \div 700$ $= (+) 157.4 / 157 \text{ (J K}^{-1} \text{ mol}^{-1}\text{)}$ <p>OR</p> $= (+) 0.1574 / 0.157 \text{ kJ K}^{-1} \text{ mol}^{-1}$ <p>Allow TE on incorrect equation with recognisable error, e.g. transfer error of value for ΔH or use of incorrect temperature.</p> <p>Do not award incorrect units</p> <p>Ignore SF except 1 SF</p> <p>Correct answer with no working scores (2)</p> <p>Correct value with negative sign scores (1)</p>	(2)

Question Number	Answer	Additional guidance	Mark
19(a)(iv)	<ul style="list-style-type: none"> Finds ΔS_{system} 	<p>Example of calculation</p> $(\Delta S_{\text{system}} = \Delta S_{\text{total}} - \Delta S_{\text{surroundings}})$ $= (-78.7 - 157.4))$ $= -236.1 / -236 \text{ (J K}^{-1} \text{ mol}^{-1}\text{)}$ <p>OR</p> $= -0.2361 / -0.236 \text{ (kJ K}^{-1} \text{ mol}^{-1}\text{)}$ <p>Allow -235.7 if $\Delta S_{\text{surroundings}} = 157 \text{ J K}^{-1} \text{ mol}^{-1}$ -238.7 if $\Delta S_{\text{surroundings}} = 160 \text{ J K}^{-1} \text{ mol}^{-1}$</p> <p>TE from (a)(iii)</p> <p>Ignore SF except 1 SF</p>	(1)

Question Number	Answer	Additional guidance	Mark												
19(a)(v)	<p>This question assesses a student’s ability to show a coherent and logically structured answer with linkages and fully-sustained reasoning.</p> <p>Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning.</p> <p>The following table shows how the marks should be awarded for indicative content.</p> <table><tr><th>Number of indicative marking points seen in answer</th><th>Number of marks awarded for indicative marking points</th></tr><tr><td>6</td><td>4</td></tr><tr><td>5–4</td><td>3</td></tr><tr><td>3–2</td><td>2</td></tr><tr><td>1</td><td>1</td></tr><tr><td>0</td><td>0</td></tr></table> <p>The following table shows how the marks should be awarded for structure and lines of reasoning.</p>	Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points	6	4	5–4	3	3–2	2	1	1	0	0	<p>Guidance on how the mark scheme should be applied:</p> <p>The mark for indicative content should be added to the mark for lines of reasoning. For example, an answer with five indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning).</p> <p>If there are no linkages between points, the same five indicative marking points would yield an overall score of 3 marks (3 marks for indicative content and no marks for linkages).</p> <p>In general it would be expected that 5 or 6 indicative points would get 2 reasoning marks, and 3 or 4 indicative points would get 1 mark for reasoning, and 0, 1 or 2 indicative points would score zero marks for reasoning.</p>	(6)
Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points														
6	4														
5–4	3														
3–2	2														
1	1														
0	0														

		Number of marks awarded for structure of answer and sustained line of reasoning		
	Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout.	2		
	Answer is partially structured with some linkages and lines of reasoning.	1		
	Answer has no linkages between points and is unstructured.	0		
	Indicative content <ul style="list-style-type: none"> • Rate of reaction is higher / faster • More ammonia produced in a given time • At higher temperature ΔS_{surr} is less positive / decreases / smaller • ΔS_{total} more negative / less positive • K_p decreases • equilibrium position moves further left / in the endothermic direction / in reverse direction / gives lower yield of ammonia / makes reaction less feasible 		<p>If there is any incorrect Chemistry, deduct mark(s) from the reasoning. If no reasoning mark(s) awarded, do not deduct mark(s).</p> <p>Ignore comments about ΔS_{system}</p> <p>ALLOW reaches equilibrium faster Higher energy cost as an alternative but not just higher cost without justification.</p> <p>ALLOW $-\Delta H/T$ for ΔS_{surr}</p> <p>Ignore decreases / smaller</p> <p>ALLOW K_c or K</p>	

Question Number	Answer	Additional guidance	Mark
19(b)(i)	<ul style="list-style-type: none"> Correct expression for K_p 	$K_p = \frac{pp(\text{NH}_3)^2}{pp(\text{N}_2) pp(\text{H}_2)^3}$ <p>Other formats are acceptable but must have a p or pp. Accept capital P</p> <p>Do not award use of square brackets, e.g. $[\text{N}_2]$</p>	(1)

Question Number	Answer	Additional guidance	Mark
19(b)(ii)	<ul style="list-style-type: none"> Calculates partial pressure of ammonia Calculates value of K_p States units 	<p>Example of calculation</p> <p>$pp\text{NH}_3 = (255 - 25 - 150) = 80 \text{ (atm)}$</p> <p>$K_p = ((80)^2 / (25) (150)^3) = (7.5851852 \times 10^{-5})$ $= 7.5852 \times 10^{-5}$ Ignore SF except 1 SF</p> <p>TE on incorrect $pp\text{NH}_3$ and on equation in (i)</p> <p>atm^{-2}</p> <p>TE for units on incorrect equation in (i)</p>	(3)

Question Number	Answer	Additional guidance	Mark
19(b)(iii)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> • (K_p) remains the same (1) • Fraction / quotient / Q / Q_p / apparent value of K_p decreases in value (when pressure increases) (1) • so equilibrium shifts to right hand side (to return K_p to its original value / to keep K_p constant) (1) 	<p>Allow partial pressures of denominator / N_2 and H_2 increases more than the numerator / NH_3 Ignore use of Le Chatelier's Principle</p> <p>Must be linked to Q_p returning to the value of K_p not as a result of Le Chatelier's Principle</p> <p>Allow produces more ammonia (so K_p is constant / returns to original value)</p>	(3)

(Total for Question 19 = 20 marks)

(Total for Section C = 20 marks)

Total for Paper = 90 marks
