Subsidiary Level In Physics (WPH11)

Paper 01 Mechanics and Materials

Question Number	Answer	Mark
1	<p>C is the correct answer</p> <p>A is not the correct answer as units would be kg m s^{-2} B is not the correct answer as units would be kg m s^{-1} D is not the correct answer as units would be $\text{kg m}^2 \text{s}^{-2}$</p>	(1)
2	<p>B is the correct answer</p> <p>A is not the correct answer as force per unit length has no meaning. C is not the correct answer as this is the gravitational force. D is not the correct answer as this is gravitational potential.</p>	(1)
3	<p>B is the correct answer</p> <p>A is not the correct answer as the magnitude of the final velocity would be greater and a little less to the right. C is not the correct answer as the final velocity would be greater and to the left of the original velocity. D is not the correct answer as the final velocity would be similar to C, but more to the left and of a lesser magnitude.</p>	(1)
4	<p>D is the correct answer</p> <p>A is not the correct answer as the velocity is not constant at all times. B is not the correct answer as the velocity is still not constant at all times. C is not the correct answer as the air resistance does not act in the opposite direction to gravity when an object travels upwards.</p>	(1)
5	<p>D is the correct answer</p> <p>A is not the correct answer as the areas under the two graphs are not both zero. B is not the correct answer as the areas under the two graphs are not equal. C is not the correct answer as P is <u>at</u> the initial position.</p>	(1)
6	<p>A is the correct answer</p> <p>B is not the correct answer as the change in velocity is not 2 m s^{-1}. C is not the correct answer as it gives a negative time, and the collision takes a positive amount of time. D is not the correct answer for the same reason that B is not.</p>	(1)
7	<p>D is the correct answer</p> <p>A is not the correct answer as it contradicts Newton's Third Law. B is not the correct answer as it also contradicts Newton's Third Law. C is not the correct answer as the force of Y on X is in the opposite direction to the velocity of X.</p>	(1)
8	<p>D is the correct answer</p> <p>A is not the correct answer as it gives units of J^{-1} which is not a unit for energy. B is not the correct answer for the same reason that A is not. C is not the correct answer as $68 \neq 68\%$.</p>	(1)
9	<p>C is the correct answer</p> <p>A is not the correct answer as every column is wrong. B is not the correct answer as the P and Q columns are the wrong way round. D is not the correct answer as the Q and R columns are the wrong way round.</p>	(1)

10	<p>A is the correct answer</p> <p>B is not the correct answer as the gravitational force does not increase. C is not the correct answer as an increase in temperature would reduce the viscosity which would not account for a decrease in acceleration. D is not the correct answer as the upthrust depends on the density of the fluid and the volume of the sphere, neither of which changes.</p>	(1)
